Bruce Bennett asked why the landing distance wasn't extended in the displaced threshold. Rainse replied that this is how the displaced threshold is calculated since the pavement is only usable in one direction. Bruce asked if it can be considered as a stop-way. Sarah replied that you can only use the 5,000 feet to calculate the distance available. Bruce asked if the Runway 17 run-up pad was shown. Rainse replied that it was included in both alternatives, however it is shifted down to the very end of Runway 17 in the displaced threshold scenario. Rainse also added that easement acquisition is needed at Columbia Helicopters for the displaced threshold to the North.

Chapter 6 – Airport Layout Plan:

Rainse reviewed the Airport Layout Plan (Chapter 6). He explained that the Airport Layout Plans are a pictorial culmination of the master planning process. In order to be eligible to receive funding from the FAA, projects must be shown in the FAA-approved Airport Layout Plan. The drawings include:

- Cover sheet
- Airport Layout Plan
- Airport Airspace
- Airport Approach Surfaces
- Inner Portion of the Runway 17/35 Approach Surfaces
- Terminal Area Plan
- Land Use and Noise Contours
- Runway Departure Surfaces
- Airport Property Map

The Airport Layout Plan includes runway safety areas, displaced thresholds, location for the control tower (northern – CAA ramp area), fire station (centrally located), service road, relocation/closure of Keil Road, and modification of the runway object free area.

PAC Discussion:

Fred Netter said that at the last meeting, we talked about the tower and its proximity to the fire station and there being an issue with homeland security. He asked how close the tower is to the fire station in the Airport Layout Plan and whether that will be an issue. Mitch replied that ODA has appealed this to the FAA and the threat didn't justify the security clearance. Fred asked whether it is possible to connect the fire station facility to other buildings. Mitch replied that if there is some way of funding it from a grant or other source, then that would make it feasible. He added that if there is outside funding, they should talk. Fred replied that there might be other funding sources available. Mitch added that they would need to identify funding, etc. pretty quickly since an engineer has already been hired for the control tower.

Nick Kaiser asked if there are any changes in the previous chapters based on discussions with the ODA Board, such as the land use areas, etc. Rainse replied that in the alternatives chapters, we outlined all the issues relative to the alternatives discussed at that time, and the chapter content will remain the same since it provides the context for developing the preferred alternative shown in the ALP. Mitch added that if ODA gets approval for the displaced threshold distances to the north, you would probably see airplanes taking off to the south. Nick asked if there will be any changes in the noise levels.

Tony Holt suggested including the assumptions related to departures on the maps that show the conditions for 2010. Rainse replied these are listed in Chapter 5, but they can be summarized on the ALP noise drawings as well.

Chapter 7 – Capital Improvement Plan:

Sarah reviewed the Capital Improvement Plan Chapter and explained that this provides the basis for implementing the improvements in the Master Plan. She also explained that the Capital Improvements would be implemented within three separate phases:

- Short-term (Phase I): 2012-2016
- Intermediate-term (Phase II): 2017-2021
- Long-term (Phase III): 2022-2031

A Financial implementation analysis was also conducted to examine the various facets of the financial operating condition of the Airport. The Capital Improvement Plan is a living document and is updated as projects are completed or priorities change. As of right now, this is the prioritization of projects:

Phase I:

1. Construct Air Traffic Control Tower (ATCT) – 2012
2. Service Road – 2012
3. Pavement Maintenance – 2013
4. Helicopter Landing Pads – 2014
5. Ramp reconstruction – state leased – 2014
6. Taxi-lane Development (Hangar Access) - 2014
7. Hangar Development – 2015
8. Carryover Entitlements – 2015
9. Environmental Assessment for Runway Improvements – 2016
10. Pavement Maintenance – 2016

Total cost of Phase I Improvements - $8 million (ODA share = $583,000, FAA share = $2.5 million, Private share = $2.1 million, other funding = $2.7 million)

Phase II:

11. Aurora Fire Response Facility – 2017
12. Carryover Entitlements – 2017

Displaced Threshold Improvements Only:

13. Property Acquisition – 2018
14. Avigation Easement Acquisition – 2018
15. Carryover Entitlements – 2019
16. 800 foot Displaced Threshold to the north – 2020
17. Install Runway – 2020
18. Runway 17 Run-up Area – 2020

Runway Extension to the South Only:

19. Property Acquisition – 2018
20. Keil Road Relocation – 2019
21. Runway 35 1,000 Extension to the south – 2020
22. Install Runway 17 Precision Approach – 2020

Other improvements not related to above alternatives:

23. Pavement Maintenance – 2019
24. Taxi-lane development (hangar access) – 2019
25. Runway 17 & 35 Strengthening Overlay – 2020
26. Hangar Development – 2021
27. Master Plan Update – 2021

Total cost of Phase II Improvements - $7.6 million for Displaced Threshold (ODA share = $263,000, FAA share = $4.6 million, Private share = $2.7 million). $12 million for Runway Extension to the South (ODA share = $487,000, FAA share = $8.9 million, Private share = $2.7 million).

Phase III (2022 – 2031):

28. Pavement Maintenance
29. Apron Development/Run-up area
30. Taxi-lane development (Hangar Access)
31. Hangar Development
32. Cargo Apron
33. Relocate Fuel Tanks
34. Runway 17 run-up area

Total cost of Phase III improvements – $4.5 million (ODA share = $200,000, FAA share = $2.2 million, Private share = $2.1 million)

Sarah explained that ODA and the FAA share the cost of improvements. The Airport pays 5% and FAA pays the remainder for the majority of Airport Improvement Program (AIP)-eligible projects. One exception would be pavement maintenance through the Pavement Maintenance Program, where the Airport supplies 75% of the funding. Items related to hangar development were shown to be 100% private funding, as the FAA rarely funds revenue-generating projects.

Sarah explained that the financial analysis explored the feasibility of implementing these projects. This process entailed looking at the following conditions at the Airport:

- Financial operating condition
- Historical operating revenues and expenses
- Projected future revenues and expenses, with focus on Capital Improvement Plan development phases

The approach to the analysis was to:

- Review financial documents
- Evaluate rates and charges
- Review existing operating and financial environment
- Review Master Plan Capital Improvement Plan
- Analyze sources and timing of capital funding
- Analyze historic and projected operating revenues and expenses

Sarah said that the historical operating revenue and expenses at Aurora State are included in two funds – Public Transportation and Capital Projects. The following shows the revenues and expenses for both funds:

Public Transportation Fund	**FY2007**	**FY2008**	**FY2009**	**FY2010**
• Licenses and fees	$869.64	$116,748	$122,970	$128,358
• Rents and royalties	$149,206	$55,342	$44,461	$63,428
• Other misc. revenues	$11,833	$1,807	$11,649	$12,310
Revenues	*$161,909*	*$173,898*	*$179,081*	*$204,096*
• Salaries and wages	$19,288	$19,234	$19,263	$14,426
• Services, supplies, other	$65,793	$56,667	$38,435	$81,609
Expenses	*$85,081*	*$75,901*	*$57,698*	*$96,035*
Operating Income	*$76,827*	*$97,996*	*$122,382*	*$108,060*
Capital Projects Fund	**FY2007**	**FY2008**	**FY2009**	**FY2010**
• Revenues	$207,856	$2,905,882	$1,857,084	$13,198
• Expenses	$155,561	$3,524,431	$1,005,192	
Fund total	*$52,294*	*$(618,548)**	*$851,891*	*$13,198*

*Taxiway relocated

The projected Aurora State operating revenues and expenditures for the Public Transportation Fund are shown below.

- The Capital Project Fund is not shown as it is dependent upon eligibility and grant availability, which fluctuates.
- Does not include federal or other grant revenues or professional service expenses as they will vary and do not reflect true operating income.

Public Transportation Fund	**Current FY2011**	**FY2015**	**FY2020**	**FY2025**	**FY2030**
• Licenses and fees	$128,358	$145,000	$176,000	$224,000	$300,000
• Rents and Royalties	$63,428	$71,000	$87,000	$111,000	$148,000
• Other misc. revenues	$12,310	$14,000	$17,000	$22,000	$29,000
Revenues	*$204,096*	*$230,000*	*$280,000*	*$357,000*	*$477,000*
• Salaries and wages	$14,337	$16,000	$19,000	$24,000	$33,000
• Services, supplies, other	$96,035	$108,000	$128,000	$164,000	$219,000
Expenses	*$110,372*	*$124,000*	*$147,000*	*$188,000*	*$252,000*
Operating Income	*$93,723*	*$106,000*	*$133,000*	*$169,000*	*$225,000*

Sarah summarized the financial analysis by stating the following:

- Demand and the availability of financial resources for capital projects will dictate when facility improvements will be implemented.
- Continuation of the FAA's AIP entitlement program is essential for funding capital projects.

- The ODA does not allocate any indirect revenues or expenses to any of their 28 airports. Any additional ODA revenues would not be allocated to Aurora State Airport until the project costs are incurred and revenues are transferred.
- Based on ODA acceptance of the Capital Improvement Plan projects and the understanding that funding for the state's obligation will be met at the time of project implementation, the Capital Improvement Plan is financially feasible.

Sarah also noted that based on historic revenues, the ODA has funding to move forward with the first two phases of the Capital Improvement Plan.

PAC Discussion:

Tony commented that it was interesting that the cost to extend the runway to the South is two and half times the cost of the displaced threshold.

Bruce Bennett said he would like to point out that the revenues reported are 100% from aviation.

Public Workshop:

Sarah explained the format for the public workshop. Members of the public were then invited to review the display boards and ask project staff any questions during a 25-minute public workshop. Public comments were captured on flip charts by the facilitation team.

Adrienne and Sylvia recapped the comments heard from participants during the public workshop session:

- The sooner the better with improvements – especially the overlay because that will reduce maintenance costs and increase the life of the runway.
- Will there be any analysis of increased traffic at other airports by pilots who don't want to deal with the Aurora Air Traffic Control Tower after it is built?
- How do you prioritize the projects on the Capital Improvement Plan?
- What uses will be permitted on the service road?
- Are there caretaker facilities and can others be located on the airport?
- Run-up area is essential
- Why won't the run-up area be done sooner?
- Will the FAA buy off on the displaced threshold?
- Where/what are the required vertical clearances?
- What is the timing of the various improvements?
- Where will Keil Road be located to?
- Where will property acquisition/easement acquisition take place? What properties are impacted?
- What are the noise impacts/future flight patterns?
- Why are we doing the Master Plan Update?
- What is entailed in each alternative (Displaced Threshold and Runway Extension to the South)?
- Where are the developable properties?
- How will the Instrument Departure/noise mitigation process work?

Rainse explained that other than the Air Traffic Control Tower and the service road, there wouldn't be a lot of development over the next 5 years in order to save up entitlements for future improvements such as the runway extension or the displaced threshold. Mitch added that there are opportunities to re-prioritize projects based on need and available funding, such as the run-up area.

PAC Discussion:

Fred asked where Keil Road would be relocated to if relocation does occur. Rainse replied that is really up in the air at this time. He said they looked at the area and took a shot at it, but if and when that happens a variety of options will be reviewed if and when it comes up in the phasing plan. Mitch replied that it has to be coordinated with property owners and the County and there isn't a pre-determined outcome at this time.

Bruce recommended as a compromise, that the helicopter pads could be moved to make way for other projects even though it's a worthy project.

Jim asked if there was any way to move up the fire facility or co-locating it with another facility as opposed to duplicating utility needs, etc. He added that this would benefit the airport and the community. Fred replied that now that there is an engineer on board, he will arrange to talk with ODA to put something together. He asked whether or not the timeframe needed to conform with the phasing plan. Rainse said that the timing did not necessarily need to conform with the phasing plan since the funding is on the private side.

Mark asked if the service road was indicated on the Airport Layout Plan. Rainse replied that it was and indicated that it starts at the existing road and goes down to the existing taxilane (it is shown as a blue dashed line on the ALP). Fred asked if it started where you come off of Keil Road (near Metal Innovations). Rainse replied that it was.

Public Comment:

Karen Batte, lives on Ehlen Road. She stated that obviously with the tower coming in, you must be anticipating growth. What kind of growth are you anticipating and what are the impacts to Ehlen Road? At 5 p.m. it is blocked. How will you influence the state to get that road fixed? Mitch replied that this has been a discussion item at several meetings. He said that they will have to work with the County and the State when it comes to road improvements. Rainse said that as far as the tower is concerned, it is a safety related item, not to promote growth. The airport has been growing without the tower. It is a safety need to control aircraft movements in the air and on the ground. He said he could review the forecasts for future growth and type of aircraft with Ms. Batte after the meeting. Rainse added that staff are available for questions after the meeting for anyone who was interested.

Comment Forms- One public comment form was submitted with the following comments:
General comments regarding the Airport Layout Plan – Keil Road should not be closed or moved. The majority of local citizens and tax payers want the airport left as it is. No tower or Runway lengthening. I guess the local citizens have no say in this. These proceedings are dishonest and a waste of time.

Next Steps:

Rainse explained that there will be an opportunity for public comments on the two chapters until Sept. 30th. Comments may be submitted via comment forms at meeting or to staff or online.

The final draft will be prepared and submitted to the ODA Board and the FAA. It will also be available on the website for review. Notification will be sent to the PAC when available on the web.

Typically it takes 90 days for the FAA to review and approve an Airport Layout Plan. From there, the ODA will pursue adoption of the Master Plan as part of the Marion County Comprehensive Plan.

Mark Ottenad asked if the FAA's decision to adopt one of the two options would create some changes to the plan. Mitch replied that both options will be included in the Master Plan, but one will be indicated as the preferred alternative. He added that they are still going to present the 800-foot displaced threshold to the FAA and wait for them to say no before moving forward with any other option. Rainse said that after the decision is made, the document will be revised to show the chosen alternative. It will show the progression of the decision-making process. The other chapters will remain the same, but the Airport Layout Plan and the Capital Improvement Plan chapters will be updated. There will be a statement about what decision was made by the FAA.

Tony requested that when the final document is posted on the website, PAC members be notified where the significant changes are so they don't have to go through it page by page.

Jim asked whether the last time Master Plan update was adopted in the Marion County Comprehensive Plan. He said that we need to do it right this time and we need to answer questions about the impacts to roads and land use. He asked what the next step is for getting the plan adopted in the Marion County Comprehensive Plan. Nick replied that the County must agree to change the Comprehensive Plan, but it takes funds to do it because it's an extensive process. He said that doesn't mean you can't implement it, but the land use portions need to be brought on board. He added that the Master Plan does have land use impacts that need to be addressed. Patti said that the Comprehensive Plan adoption is another formal process with additional opportunity for public input, but we will have something to work from that will be presented and requested to be adopted. She added that doesn't eliminate anyone from coming forward and sharing any concerns that they might have. Jim said he really wants to make sure it gets adopted as part of the Comprehensive Plan because that could help developers as well as create a greater understanding of the Master Plan. He said that we should make sure we are able to produce a profit and make some money for the community.

Rainse thanked everyone on the PAC and the hard work they've done and thanked the public for coming out and asking questions.

Jim thanked Rainse and the consultant team for the work they've done.

Mitch thanked WHPacific, ODA staff and those that aren't here and have since moved on. He also thanked the PAC for spending their time studying the issues and making comments. He thanked the

public for their time and participation. He also stated the PAC and public comments had influenced and changed the course of the Master Planning process.

Meeting adjourned at approximately 6:45 p.m.

Appendix F:
OREGON AVIATION PLAN (OAP) INDIVIDUAL REPORT

Airport Master Plan Update

Aurora State Airport

WHPacific
OREGON DEPARTMENT OF AVIATION

Chapter 1 Introduction

The state of Oregon has an extensive aviation system spread throughout the state, providing valuable transportation options for the public, which range from small emergency use airports in remote regions to the extensive passenger enplanements at Portland International. Managing such a large and diverse system of airports can be a daunting task if a comprehensive plan is not in place to serve as a guide. In addition, with the ever-increasing demands for project funding, it is imperative that the Oregon Department of Aviation (ODA) have a solid inventory, understanding of need, and plan for development for the entire state aviation system to meet the needs of existing and future development.

This report is a combination of three studies, which will guide the development of the aviation system in Oregon for years to come. This document is organized into three distinct sections. *Chapter Two* summarizes the overall study goals, roles, and methodologies used to develop the study. *Chapter Three* is a summary of the various inventory efforts associated with the individual airport facilities. *Chapter Four* contains specific roles, recommendations, and funding options for the airport. This report will provide each community with information, which can guide the development of each facility in an orderly, economic, and environmentally friendly manner.

This Page Intentionally Left Blank

Chapter 2

The growing aviation demand in Oregon has prompted the Oregon Department of Aviation (ODA) to update the previous State Aviation System Plan published in 2000 and develop economic impact assessments that gauge the benefits of aviation to the state. Oregon is currently experiencing an unprecedented growth in population as well as aircraft operations. In order for the state to continue to provide a safe and efficient aviation system while accommodating growth, it is important to evaluate what facilities and capabilities are here today and what will be needed for tomorrow.

This chapter is organized into the following sections:

2.1 *Oregon Aviation Plan 2007* (*OAP 2007*) Study Components
2.2 Overall Study Goals & Objectives
2.3 Airport Functional Roles
2.4 Performance Measures
2.5 Summary

2.1 *Oregon Aviation Plan 2007 (OAP 2007)* Study Components

Three unique studies were originally undertaken which resulted in the development of the *OAP 2007*. This included a traditional state aviation system plan update which was developed to meet Federal Aviation Administration (FAA) requirements. An economic impact study was completed to assess the economic value of the aviation system at the state and local levels. The state aviation master plan component evaluated airports not included within the traditional state system plan criteria, as well as evaluating additional areas of interest or special consideration topics. The aforementioned goals were originally distributed over these three separate studies as outlined above, however, since there were numerous commonalities between the studies, they were combined into a single report for greater ease of use. Additional detail on each of these three studies is listed below. The information contained in the *OAP 2007* is the compilation of information, findings, and recommendations for all three studies.

2.1.a State Aviation System Plan

The *OAP 2007* addresses many different issues related to each individual airport and regional and state aviation system components. It is important to have a comprehensive understanding of the existing facilities, the need for future facilities, and the feasibility of reaching future goals. A state aviation system plan update is based upon sound evaluation of existing facilities, coupled with a clear understanding of the state and nation aviation interests, as well as the needs of the general public. The methodology used to evaluate the state system is consistent with that advocated for use by the FAA in Advisory Circular (AC) 150/5070-7 — *The Airport System*

Planning Process, issued November 10, 2004. All 97 public-use airports are listed in **Table 2.1** – **Public-Use Airports in Oregon**. Their associated city, FAA classification, and their type of ownership are noted within the table.

The *OAP 2007* includes 66 public-use airports, which are part of the National Plan of Integrated Airport Systems (NPIAS). The study group of airports was based upon extensive coordination with the ODA and the FAA. The study group includes the 57 airports currently listed on the NPIAS, eight state-owned airports which serve either a recreational/tourism base or have more than two based aircraft, and one privately owned airport, which serves a significant number of based aircraft.

2.1.b State Aviation Master Plan

The state aviation master plan element of the *OAP 2007* was included to ensure a comprehensive evaluation of all public-use airports within Oregon and was funded independently by the ODA. There are an additional 31 public-use airports in Oregon that were not included in the federally funded state aviation system plan component (NPIAS). These airports were evaluated using the same methodology of the state aviation system plan to provide the ODA a complete inventory of the state's aviation system resources. In addition to the evaluation of individual airports, the state aviation master plan was designed to evaluate broader, more conceptual issues related to the entire state aviation system. The evaluation of these issues will help the ODA better manage and improve the state system of airports.

2.1.c State Aviation Economic Impact Study

With the movement towards a global economy, it is now recognized that airports are no longer just another mode of transportation. Airports are vital components of the economic engine that drives the state, regional, and local economic climate and it is essential the state system of airports support these economies by providing adequate facilities and services. This study will provide the ODA, individual communities, airports and governmental agencies, and politicians the opportunity to assess the economic value of the aviation system as a whole as well as each individual airport. All 97 public-use airports, as shown in **Table 2.1**, are included in the analysis.

Table 2.1 Public-Use Airports in Oregon

Associated City	*Airport Name*	*NPIAS Status*	*Ownership*
Albany	Albany Municipal Airport	Yes	Publicly Owned
Alkali Lake	Alkali Lake State Airport	No	Publicly Owned
Arlington	Arlington Municipal Airport	No	Publicly Owned
Ashland	Ashland Municipal Airport - Sumner Parker Field	Yes	Publicly Owned
Astoria	Astoria Regional Airport	Yes	Publicly Owned

2.2 Overall Study Goals & Objectives

The primary goal of the three studies is to provide a comprehensive plan which addresses all public-use airports in the state of Oregon and which identifies how to improve individual airports as part of the larger state system, to meet the needs of tourism, economic development, and transportation services for each community and the state as a whole.

This information provides the framework that supports informed decisions related to planning and developing the Oregon aviation system. The objectives of these studies are to:

- Assess aviation facilities: including airside, landside, and ground facilities and services, and general aviation needs
- Assess the economic value of airport facilities to the host community as well as the overall importance to the state
- Provide guidance for the development of the Oregon system of airports to meet the state's future aviation needs to ensure the safety and efficiency of the state aviation system
- Enhance communication opportunities among ODA, airport sponsors, local government, other state and federal agencies, and airport users so that the future development of the state aviation system can be more readily accomplished
- Provide each airport the direction to develop their airport to meet the needs of the state aviation system and local community as well as promote the airport for the purposes of economic development and tourism

Each of these individual studies is a portion of the overall process necessary to create a systematic approach to meeting the improvements which are identified, as well as proposing development strategies. This report provides a summary of the results of three planning studies undertaken by ODA to assess the condition of the existing aviation infrastructure, the economic benefit of the aviation industry, and the passenger demands for air service.

2.3 Airport Functional Roles

Each airport in the state impacts the overall operational capacity and efficiency of the state aviation system by supporting different types and levels of aviation activity. The types of facilities and services that should be provided at each category of airport were determined throughout the development of this plan. Airport functional roles have been broken out into five categories and the following criteria were utilized to classify the airports:

- Current airport infrastructure, facilities, and services
- Aviation activity levels and type of aviation demand served
- Ability to accommodate future growth
- Accessibility and geographic service area

The five airport functional roles are defined on the following page.

Category I – Commercial Service Airports

These airports support some level of scheduled commercial airline service in addition to a full range of general aviation aircraft. This includes both domestic and international destinations.

Category II – Urban General Aviation Airports

These airports support all general aviation aircraft and accommodate corporate aviation activity, including business jets, helicopters, and other general aviation activity. These airports' primary users are business related and service a large geographic region or they experience high levels of general aviation activity.

Category III – Regional General Aviation Airports

These airports support most twin- and single-engine aircraft and may also accommodate occasional business jets. These airports support a regional transportation need.

Category IV – Local General Aviation Airports

These airports support primarily single-engine, general aviation aircraft, but are capable of accommodating smaller twin-engine general aviation aircraft. These airports support local air transportation needs and special use aviation activities.

Category V – RAES (Remote Access/Emergency Service) Airports

These airports support primarily single-engine, general aviation aircraft, special use aviation activities, and access to remote areas or provide emergency service access.

Volume I of the *OAP 2007* displays all airports within their various categories.

2.4 Performance Measures

Airport performance measures were developed for the functional roles. These objectives were developed in cooperation with ODA and the state aviation system plan and master plan Advisory Committee. The purpose of the performance measures is to compare existing airport facilities to the minimum and desired facility criteria for each functional role. The performance measures should not be considered a requirement for development standards and any development would require additional support and justification through the airport master planning process as well as environmental documentation.

The performance measures for each functional role are defined below. Many airports have multiple runways; therefore, the primary runway for each airport was used to evaluate the facility against the performance measures.

Category I – Commercial Service Airports

These airports support some level of scheduled commercial airline service in addition to a full range of general aviation aircraft. This includes both domestic and international destinations.

Performance criteria were evaluated by analyzing each airport's primary runway. A complete description of airport facilities is located below.

Airside Facilities	**Minimum Criteria**	**Desired Criteria**
FAA - ARC	C-II	Varies
NPIAS	Yes	Yes
Based Aircraft	Not an Objective	Not an Objective
Runway Orientation	Varies by Airport	Varies by Airport
Runway Length	6,000 feet	Varies by Aircraft
Runway Width	100 feet	Varies by Aircraft
Runway Pavement Type	Bituminous, Concrete	Bituminous, Concrete
Runway Pavement Strength	Varies by Airport	Varies by Airport
Runway Pavement PCI	Varies by Airport	Varies by Airport

2.5 Summary

Each of these study efforts will provide valuable information to the state as well as the individual airports as stand-alone documents. Combined together, these studies provide a comprehensive resource for airport development throughout the entire state.

Chapter 3

As outlined in the Federal Aviation Administration (FAA) Advisory Circular 150/5070-7, *The Airport System Planning Process*, the process of system planning for aviation is based upon the collection and evaluation of information about each airport within the overall system and the area they serve. The inventory task is accomplished through physical inspection of the facilities, field interviews and surveys, telephone conversations, and review of previous studies.

The objective of the inventory task is to document existing conditions, thereby providing the background information essential to the development and recommendations for the *Oregon Aviation Plan 2007 (OAP 2007)*. The inventory information covers a broad spectrum and includes information on the following elements of the Airport:

- Airside and landside facilities and their uses
- Navigational aids
- Auxiliary support facilities and services
- Environmental observations
- Air traffic activity data
- Survey analyses

A large volume of data was collected, reviewed, and analyzed during the inventory effort. This chapter presents an overall summary of this information and is organized in the following sections:

3.1 General Airport Description and Location
3.2 Existing Airport Facilities
3.3 Current and Forecast Demand
3.4 Survey Responses

3.1 General Airport Description and Location

Aurora State Airport is located approximately one mile northwest of the city of Aurora, within Marion County (**Figure 3.1**). Regionally, the Airport is located approximately 25 miles south of Portland, 25 miles north of Salem, and 90 miles north of Eugene. The airport has easy access to Interstate Highway 5, which is the critical North/South ground transportation link through the Willamette Valley.

According to the State of Oregon Office of Economic Analysis, Marion County contained 305,265 residents in 2005, up 7.2 percent from 284,834 in 2000. Oregon has grown from 3,436,750 residents in 2000 to 3,618,200 residents in 2005, up 5.3 percent. This indicates that Marion County is growing at a faster pace than the state as a whole.

Figure 3.1
Marion County Location Map

The Airport is owned and operated by the Oregon Department of Aviation and is included in the National Plan of Integrated Airport Systems (NPIAS), making this airport eligible for federal funding. Aurora State Airport, designated by the airport code UAO, occupies approximately 144 acres of land.

Historical Development. The Aurora State Airport was constructed by the Oregon State Highway Department during wartime in 1943 as an emergency airfield for air carrier aircraft. The Airport has evolved into the busiest state-owned airport and the fifth overall busiest airport in the state.

3.2 Existing Airport Facilities

Existing airport facilities are presented in three categories: airside, landside, and support facilities. The airside facilities include such areas as the runways, taxiways, aprons, aircraft parking and storage areas, airfield lighting, and navigational aids. The landside facilities include items such as the airport terminal building, vehicular access, auto parking, and support facilities. The support facilities may include fuel facilities, aircraft rescue and firefighting (ARFF) facilities, airport maintenance, snow removal equipment (SRE) and facilities, and utilities. The existing airside, landside, and support facilities are detailed below.

3.2.a Airside Facilities

The airfield consists of many components that are required to accommodate safe aircraft operations. This consists of runways, taxiways, and an apron network; the visual and electronic navigational aids associated with runways; runway protection zones; and general aviation facilities.

Runways. Aurora State Airport has a single paved runway, Runway 17-35. The runway is 5,004 feet long and 100 feet wide with an asphalt surface. The Airport currently has an Airport Reference Code (ARC) of B-II. Additional runway information such as pavement strength and condition are located in **Section 4.2**, *Definition of Airport System Role*.

Taxiways. The existing taxiway system at the Airport consists of a full-length parallel taxiway and entrance/exit taxiways.

Aprons. There are three aprons used for aircraft parking. The north terminal apron has approximately 12 small aircraft tie down spaces. The central terminal apron has 38 small tie-down spaces and four large aircraft parking positions. The southern terminal apron has approximately 10 small aircraft tie-down spaces and five large aircraft parking positions. All three aprons are constructed of asphalt.

Lighting and Navigational Aids. The Airport's lighting and navigational systems extend the Airport's usefulness into night and/or poor visibility.

Pavement edge lighting consists of light fixtures located near the edge of the runway/taxiway to define the lateral limits of the pavement. This lighting is essential for the safe and efficient movement of aircraft during periods of darkness or poor visibility. Runway 17-35 is equipped with medium intensity runway lighting (MIRL). Taxiways at the Airport are equipped with reflectors.

A four-light visual approach slope indicator (VASI) is installed both ends of Runway 17-35. A VASI system provides the pilot with a red, red/white, or white signal that indicates if the pilot is below, above, or on the glide path to the runway.

The ominidirectional approach lighting system (ODALS) is the minimum approach lighting system necessary to achieve three-quarters of a mile non-precision approaches. It consists of seven omnidirectional flashing lights located in the approach area of a non-precision runway. ODALS are installed on the approach end of Runway 17.

A Localizer approach is an Instrument Landing System (ILS) approach without the glide slope. Because there is no glide slope information provided, the Localizer approach is considered a non-precision approach. The Localizer signal provides azimuth, or lateral, information to guide the aircraft to the centerline of the runway. It is similar to a VOR signal except that it provides radial information for only a single course, the runway heading. The Airport has a Localizer approach to Runway 17.

GPS uses satellites placed in orbit around the earth to transmit electronic signals, which properly equipped aircraft use to determine altitude, speed, and position information. GPS allows pilots to navigate to any airport in the country, and they are not required to navigate using a specific navigational facility. The Airport has GPS approaches to both runway ends.

In addition to lighting and navigational aids, the Airport is also equipped with an automated surface observation system (ASOS). The ASOS provides automated aviation weather observations 24-hours a day. The system updates weather observations every minute, continually reporting significant weather changes as they occur. The ASOS system reports cloud

ceiling, visibility, temperature, dew point, wind direction, wind speed, altimeter setting, and density altitude (airfield elevation corrected for temperature).

3.2.b Landside Facilities

General Aviation Facilities. General aviation services at the Airport are provided by three fixed based operators (FBO); Aurora Aviation, General Aviation Services, and Willamette Aviation LLC. They offer aviation fuel, aircraft parking (ramp or tie-down), flight training, aircraft rental, aircraft maintenance, pilot supplies, catering, off site rental cars, and courtesy transportation.

Hangar space at the Airport is comprised of both corporate and T-Hangars. There are approximately 275 hangar facilities at the Airport. Additionally, there is considerable adjacent private development activity that is enhancing hangar facilities and drawing more Aurora based aircraft.

The majority of the landside developments at Aurora State Airport are privately owned and operated and located off airport property. Through the fence operations at the airport are discussed in detail in *Section 4.1.b General Observations and Recommendations*.

3.2.c Support Facilities

Parking. Vehicle parking is located next to each of the FBO buildings. There are moderate parking facilities at the Airport.

Fuel Facilities. All aircraft fuel storage facilities at the Airport are privately owned and operated. The FBOs provide both 100 LL and Jet A fuel.

Aurora State Airport

Source: 2003 Oregon Airport Directory

3.3 Current and Forecast Demand

This element of the report provides projections of future aviation demand at the Airport. Projections of short-, intermediate-, and long-term activity at the Airport are based on 5-, 10-, and 20-year milestones, using 2005 as the base year of analysis as it is the most recent year for which a full year of activity data is currently available.

Projections of aviation demand are an important element of the system planning process as they provide the basis for several key analyses, including:

- Determining the role of the Airport with respect to the type of aircraft to be accommodated in the future
- Evaluating the capacity of existing airport facilities and their ability to accommodate projected aviation demand
- Estimating the extent of airside and landside improvements required in future years to accommodate projected demand

This analysis uses the most recent aircraft activity available to project future levels of aviation demand through the year 2025. The forecast analysis contained in this section includes methodologies based on historical aviation trends at the Airport, as well as other socioeconomic trends related to the state of Oregon. National projections of aviation activity developed by the FAA were also reviewed within the context of this forecast analysis, where available.

This section provides discussions of the methodologies and findings used for projecting passenger enplanements, aircraft operations, and based aircraft at the Airport. The projections of aviation demand are documented below in **Table 3.1**.

3.3.a Forecasting Approach

There are a number of different forecasting techniques available for use in the projection of aviation activity, ranging from subjective judgment to sophisticated mathematical modeling. Because a large number of variables affect a facility plan, it is important that each variable be considered in the context of its use in the plan. For variables that significantly affect the nature and extent of facilities, redundancy has been achieved through the utilization of several forecasting techniques to minimize the uncertainty associated with the range of the forecast variable.

The analysis includes the assessment of historical trends on aviation activity data at the local, regional, and national level. Aviation activity statistics on such items as passenger enplanements, aircraft operations, and based aircraft are collected, reviewed, and analyzed. Similarly, socioeconomic factors such as population and income are analyzed for the effect they may have on aviation growth. The comparison of relationships among these various indicators provides the initial step in the development of realistic forecasts of aviation demand.

The following general methodologies were used in projecting various components of aviation demand at the Airport.

Time Series Methodology. Historical trend lines and linear extrapolation are some of the most widely used methods for forecasting. These techniques utilize time-series types of data and are most useful for a pattern of demand that demonstrates a historical relationship with time. In utilizing this technique, an assumption is made that the same factors that have influenced demand will continue to affect future demand. While this is a rather broad assumption, it often provides a reliable benchmark for comparing the results of other analyses. Linear extrapolation established a linear trend by fitting a straight line using the least squares method to known historical data. Historic trend lines, as utilized in these analyses, examine historic compounded annual growth rates and extrapolate future data values by assuming a similar compounded annual growth rate in the future.

Market Share Methodology. Market share, ratio, or top-down models are utilized to scale large-scale aviation activity down to a local level. Inherent to the use of such a method is the demonstration that the proportion of the large-scale activity that can be assigned to the local level is a regular and predictable quantity. This method has been used extensively in the aviation industry for aviation demand forecasting at the local level. Its most common use is in the determination of the share of total national traffic activity that will be captured by a particular region or airport. Historical data is examined to determine the ration of local airport traffic to total national traffic. From outside data sources, in this case the FAA, projected levels of national activity are determined and then proportioned to the Airport based upon the observed and projected trends.

Socioeconomic Methodology. Socioeconomic or correlation analysis examines the direct relationship between two or more sets of historical data. In this case, socioeconomic analyses have been performed, relating historical aviation activity to historical population levels within the Airport region. Based upon the observed and projected correlation between historical aviation activity and the socioeconomic data sets, future aviation activity projections are developed based upon the projected socioeconomic data sets. In this case, projected population levels were obtained from Woods & Poole Economics, Inc. (W&P), an independent firm that specializes in long-term economic and demographic projections. This forecasting methodology is subject to how accurately an airport's activity reflects local demographic makeup.

Table 3.1 Summary of Aviation Projections

Aurora State Airport (UAO)

Year	Operations				Based Aircraft
	Commercial Air Carrier	General Aviation	Military	Total

3.4 Survey Responses

As previously discussed, surveys were a critical part of the data collection effort. Below is a summary of the surveys and staff interviews that provide the context that surrounds the *OAP 2007*. Surveys were sent to state, local, and county government officials, businesses, airport managers, pilots, chamber of commerce members, and host communities to solicit input of the state aviation system from diverse interests groups.

3.4.a Community Information

Currently, agriculture, timber, and manufacturing were noted as the primary industries in the Aurora area. Survey respondents indicate that the Airport is perceived to be a valuable economic asset to the community. The respondents also indicated that if there were no longer an airport available to the public, they would use the next closest airport. Survey results identified noise, security, safety, and expansion of the Airport as the main concerns regarding the future development of the Airport.

3.4.b Economic Development

The importance of aviation for growth from an economic perspective is ranked moderately high. The survey respondents noted that airport upgrades would increase economic growth for the surrounding communities. According to the survey results, the single most important item that the Airport could do to promote economic growth is to increase runway length. In addition, it was perceived that the impact to the economy would be negative if the Airport was no longer available. Businesses would depreciate in size, relocate, or use the next closest airport. Respondents were unsure if the city of Aurora and Marion County would be supportive of a funding mechanism to finance future airport developments.

3.4.c Airport Development and Use

Survey respondents indicate that the airport users of Aurora State Airport are local business, recreation, tourism, out-of-town business, and agriculture. Surrounding communities rely on the Airport for medical rescue flights and fire protection.

Survey respondents highlighted three areas of concern regarding the Airport. These concerns are outline below:

- There are perceived operational limitations of runway length, terminal amenities, navigational aids, taxiways, aircraft parking/storage, and availability of fuel
- Inclement weather significantly reduces the “usability” of the Airport
- Lack of infrastructure (sewer and water) was noted as a concern to the future of the Airport

3.4.d Air Shuttle

Upon the request of ODA, Mead & Hunt is investigating the feasibility of a state operated and subsidized air shuttle service. This air shuttle service would link various communities within the state. Traditionally, air shuttle services do not compete with regular commercial service, their intent is to commute between smaller local communities instead of large regional airports, therefore, they are viewed as a supplement to air service for airports.

Survey Respondents indicate that some form of an air shuttle service would be considered a convenience and would likely promote economic growth for communities. Survey results indicate that the primary users of the shuttle would be business, emergency services, and health services, transportation of cargo, higher education, and governmental services. Survey results provided the order of importance of issues for potential shuttle passengers. Most important to travelers was schedule, followed by cost, reliability, type of aircraft, and comfort. Survey results identified Bend, Eugene, and Portland as the destination cities for shuttle service originating in Aurora with service being provided daily. Survey results also indicate that the city of Aurora and Marion County would be willing to "guarantee" seats for their community on the air shuttle service; however, they would expect users to pay between $151 and $200 per seat, with a potential of over 20 users per flight.

3.5 Summary

Providing a comprehensive summary of the existing airport facility is an essential part of the planning process. The information contained in this chapter provides the foundation for the recommendations found in *Chapter Four*.

This Page Intentionally Left Blank

Chapter 4

As discussed, the inventory and forecasts provide a basis from which recommendations can be made for future development. The recommendations illustrated within the *Oregon Aviation Plan 2007 (OAP 2007)* reflect the Oregon Department of Aviation's (ODA) desire to create a comprehensive aviation system that adequately services the aviation needs of the state and the various interest groups associated with this resource. This chapter is organized in the following sections:

4.1 Airport Facility and Service Needs
4.2 Definition of Airport System Role
4.3 Economic Impact Analysis

4.1 Airport Facility and Service Needs

A primary focus of this report is to identify and evaluate airside, landside, and other general facility needs and deficiencies at the Airport utilizing information collected through the physical inspection of the facility, field interviews and surveys, telephone conversations, review of previous studies, and review of appropriate airport records. The following section presents the recommended airport facility and service needs identified during the study process.

4.1.a Recommendations Based on Performance Criteria

The Aurora State Airport has been classified as a *Category II – Urban General Aviation* airport and should provide appropriate facilities and services commensurate with its system role. The existing airport facilities were compared to the minimum and desired criteria for a *Category II* airport, which identified the following airport facility and service needs:

- Increase Airport Reference Code from B-II to C-II (associated safety area improvements)
- Correct parallel taxiway / runway centerline separation
- Install Medium Intensity Taxiway Lighting (MITL)
- Construct designated cargo apron

4.1.b General Observations and Recommendations

The Aurora State Airport is one of the busiest general aviation airports in the state. A vast majority of the traffic at the Airport is conducted by corporate jets and due to its prime location between the Portland Metropolitan area and Salem, the state capital; the Airport will continue to attract business/corporate aircraft. Therefore, it should be made a priority to increase the margin of safety by developing the Airport with C category aircraft design standards.

The majority of the landside developments at Aurora State Airport are privately owned and operated. However, some areas of the airfield are owned by the state of Oregon and leased to private business. The businesses that are located off airport property are entering the airfield from private property, more commonly known as a "through the fence" operations.

Through the fence agreements provide access onto the airfield for off-airport businesses or individuals who utilize the airport infrastructure but do not lease space at the airport or contribute financially to support the airport through ground leases or operational leases like those located on airport property.

General aviation airports often have difficulty generating revenue to offset the costs of operating, maintaining, and improving the airport. An important revenue generator at many airports is the lease of airport property for private or commercial use. Private property owners adjacent to an airport that are granted access to the airport infrastructure are typically not contributing to the airport fund through the normal lease process. This often results in an economically competitive advantage to off-airport businesses. They are allowed to access the airport without paying a lease rate which often reduces their overhead, allowing them to charge lower rates than their on-airport counterparts. This creates a situation which is first and foremost noncompliant with FAA policies but more importantly, often results in a weaker airport economy.

The FAA does not have a formal policy against "through the fence" operations; however they do strongly discourage their use. To maintain an economically viable business environment the airport sponsor should require all off field businesses or individuals to compensate the sponsor similarly to those being paid by on airport tenants. A yearly fee, percentage of gross profits, or access fees are common methods of collecting compensation from off airport businesses or individuals.

ODA is currently discussing Senate Bill 680 to address the "through the fence" operations at Aurora State Airport.

4.1.c Airport Capital Improvement Program

The Airport Capital Improvement Program (ACIP) is the primary planning tool the FAA utilizes to identify, prioritize, and assign funds to capital airport development and associated capital needs for all NPIAS airports. The 2006 ACIP for Aurora State Airport includes the following projects:

- Construct taxiway Phase 06 and 07
- Relocate taxiway including purchasing land
- Update Exhibit A Property Plan
- Update airport layout plan
- Implement Phase 2 – land purchase

4.1.d Other Potential Improvements for Consideration

No other airport improvement projects were being considered at the time of publication.

4.2 Definition of Airport System Role

Category II – Urban General Aviation
These airports support all general aviation aircraft and accommodate corporate aviation activity, including business jets, helicopters, and other general aviation activity. These airports' primary users are business related and service a large geographic region or they experience high levels of general aviation activity.

Performance criteria were evaluated by analyzing each airport's primary runway. A complete description of airport facilities is located in **Section 3.2**, *Existing Airport Facilities*.

Airside Facilities	**Existing Facilities**	**Minimum Criteria**	**Desired Criteria**
FAA - ARC	B-II	C-II	Varies
NPIAS	Yes	Yes	Yes
Based Aircraft	397	Not an Objective	Not an Objective
Runway Orientation	17/35	Not an Objective	Not an Objective
Runway Length	5,004 feet	5,000 feet	Varies by Aircraft
Runway Width	100 feet	100 feet	Varies by Aircraft
Runway Pavement Type	Bituminous	Bituminous, Concrete	Bituminous, Concrete
Runway Strength	30,000 (SW)	Not an Objective	Not an Objective
Runway Pavement PCI	84	Not an Objective	Not an Objective

Fuel	100 LL & Jet A	100 LL & Jet A	100 LL & Jet A, 24-hour service
FBO	Full Service (3)	Full Service	Full Service, 24-hour service
Ground Transportation	Rental Car, Taxi	Offsite Rental Car, Taxi	Rental Car, Taxi, or Other
Food Service	Vending, Coffee Shop	Vending	Coffee Shop/Deli & Cold Foods
Restrooms	Yes	Yes	Yes
Pilot Lounge	Yes w/Weather Reporting	Yes w/ Weather Reporting	Yes w/ Weather Reporting
Snow Removal	Yes	Yes	Yes
Telephone	Yes	Yes	Yes

4.3 Economic Impact Analysis

The economic impact analysis of airports in Oregon was developed for each airport, measuring economic impacts of airport facilities, within regions and throughout the state. Airports that are part of the Port of Portland were not part of this study, except for the regional-based analysis of aviation dependent businesses. This study used the five regions of *ConnectOregon* to measure local/regional economic impacts of airports and for dependent non-aviation businesses. The regions are shown by the accompanying map.

Total economic impacts are the sum of on-airport economic activities, off-airport spending by visitors who arrive by air, and spin-off impacts (multiplier effect). Airport impacts are provided by region and state to show the contribution of each airport to the regional and state economies. In addition, aviation dependent impacts are provided by region to show the importance of airports in each region to non-aviation businesses. All impacts reported represent a base year of 2005. Each type of impact is defined in the following paragraphs.

On-Airport direct impacts represent economic activities that occur on airport grounds. By separating aviation related activities from non-aviation activities, The *OAP 2007* illustrates the regional economic contribution of aviation by airport in the regional and state economies, as well as the overall impact of each airport as a facility. Aviation related activities are those that would not occur without the airport, such as airlines, fixed base operators (FBO), government, and other tenants located at the airport or directly dependent on the airport. This category also includes airport management and other individuals employed directly by the airport, as well as retail and service operations for passengers, pilots, and other airport employees. In some cases, airports provide land or building space for companies that are not affiliated with aviation. These tenants are not related to the aviation mission of the airport, but are using the facility as a convenient and affordable business or industrial parks.

Off-Airport visitor spending (Direct Impacts) are expenditures made by air travelers who are visiting from outside the region, and occurs off the airport-in the regional economy. Visitor spending includes lodging, food, entertainment, retail purchases and ground transportation (retail purchases and on-airport car rentals are captured by on-airport impacts). Visitor spending is analyzed for commercial passengers as well as for general aviation pilots and passengers. Visitors flying into Oregon from another state or nation contribute to the airport's regional economy as well as to the state. However, passengers flying within Oregon, from one region to another, contribute to the region of their destination airport, but are not bringing additional money into Oregon. Therefore, in regions with air carrier airports, the direct impact of visitor spending for the region is higher than the impact of visitor spending for the state.

Airport dependent impacts represent area businesses that are dependent on an airport for incoming and outgoing, and for business travel. These businesses may relocate or suffer substantial loss if the airport were not available. This impact is not included in traditional economic impact methodology and is analyzed and reported by region for this study. Thus the

economic dependence of a region on aviation represents the cumulative impacts of all airports within a region. The analysis is provided as an indicator of the importance of airports to regional economies.

Spin-off impacts (Multiplier Affect) are calculated using impact multipliers, which are used to reflect the recycling of dollars through both the regional and state economy. A dollar spent in the economy does not disappear; rather, it continues to move through the local economy in successive rounds until it is incrementally exported from the community. As the expenditures described above are released into the economy, they circulate among other industry sectors, creating successive waves of additional economic benefit in the form of jobs, payroll, and output (expenditures). These successive rounds of spending are known as spin-off impacts, and help to represent the full impact of each dollar spent in a region. An example would be an airport employee spending his or her salary for housing, food, and other services. Spending occurring outside the area is considered economic leakage and is not reflected in the multiplier. Spin-off impacts are often reported as indirect and induced impacts. Indirect impacts reflect the purchase of goods and services by businesses. Induced impacts reflect worker making consumer purchases.

The project team analyzed the economic contributions of 91 airports under the jurisdiction of the Oregon Department of Aviation (ODA). In addition, the Port of Portland commissioned a separate economic impact studies of Portland International Airport, Portland Hillsboro Airport and Portland Troutdale Airport, which are administered by the Port. The sum of economic impacts derived from the OAP 2007 and the Port of Portland studies account for economic impacts generated by all public use airports in Oregon.

4.3.a Contribution of Airports to the Economy of Oregon

As shown in **Table 4.1**, Oregon public-use airports contributed a total economic impact of $8.3 billion to the state economy, including $3 billion from ODA airports and more than $5 billion from Port of Portland airports. Following Table 4.1 is a summary entitled *Airport Role in Economy*, which illustrates the individual airport economic impact.

Additional study highlights include:

- Oregon ODA public-use airports, including airport tenants, directly employ 7,000 people for aviation related activities and expend $259 million in wages
- Oregon ODA public-use airport employees and tenants earned an average annual salary of $36,000 per year for aviation activities and $35,000 per worker, when including non-aviation jobs
- Off-airport visitor industry employees earn an average annual salary of $15,000 per year

Table 4.1 Economic Contribution of Airports to the Oregon Economy

	Jobs	Wages	Business Sales
Direct Effects of ODA On-Airport Aviation Activities and Visitor Spending			
On-Airport, including FBO & air related tenants	7,273	$262,147,000	$827,475,000
Off-Airport: visitor spending	6,762	$101,641,000	$324,097,000
Subtotal of Direct Effects From ODA Airports	14,035	$363,788,000	$1,151,572,000
ODA Spin-off Effects of Supplier and Income Re-spending			
Due to On-Airport Aviation	12,029	$305,851,000	$883,988,000
Due to Visitor Spending	3,558	$94,459,000	$310,756,000
Subtotal of Spin-off Effects	15,587	$400,310,000	$1,194,744,000
Total ODA Airport Aviation Related Impacts	29,621	$764,098,000	$2,346,316,000
ODA Airport Generated Impacts of Non-Aviation Activities			
On Airport Non-Aviation Activities	2,177	$67,294,000	$320,530,000
Spin-offs due to Non-Aviation Activities	3,374	$96,239,000	$332,084,000
Total ODA Airport Non-Aviation Impacts	5,551	$163,533,000	$652,614,000
ODA Airports Total Aviation and Non-Aviation Related	35,172	$927,631,000	$2,998,930,000
Port of Portland Totals*			
Airport Generated	20,005	$941,244,000	$3,533,456,000
Visitor Generated	39,418	$907,718,000	$1,740,344,000
Total Impact Port of Portland Airports	59,423	$1,848,862,000	$5,273,800,000
Grand Total – All Airports	94,595	$2,776,493,000	$8,272,630,000

Source: Airport and Tenant Surveys, EDR Group and Mead & Hunt Analyses, IMPLAN econometric package.
Note: Numbers may not add due to rounding.
*Port of Portland Airports include Portland International Airport, ,Portland Hillsboro Airport and Portland Troutdale Airport. Data for the Port of Portland airports was provided by the Port.

Oregon Aviation Plan 2007

Total Airport Generated Impacts - Not Aviation						
5. On Airport Non-aviation Activities	39	39	$958,000	$958,000	$3,946,000	$3,946,000
6. Spin-offs due to Non-aviation Activities	32	40	$827,000	$1,006,000	$2,607,000	$3,254,000
Total Airport Non-aviation Impacts	71	79	$1,785,000	$1,964,000	$6,553,000	$7,200,000
Total Aviation and Non-aviation Related	2,403	2,469	$52,347,000	$59,326,000	$134,827,000	$147,862,000
Regional Off-Airport Aviation Dependent Business Activity						
7. Direct Business Activity	8,061	8,061	$368,349,000	$368,349,000	$2,142,913,000	$2,142,913,000
8. Spin-offs due to Dependent Activity	14,509	17,423	$425,253,000	$518,828,000	$1,468,166,000	$1,788,387,000
Total Off-airport Aviation Dependent Activity	22,570	25,484	$793,602,000	$887,177,000	$3,611,079,000	$3,931,300,000

Note: Regional Off-airport Aviation Dependent Business Activities account for business activity in the region that rely on aviation for business travel and cargo, and do not reflect a specific airport.

Appendix G:
PAC COMMENTS COMPILATION

Airport Master Plan Update

Aurora State Airport

Aurora State Airport Master Plan Update - Comments Received on Miscellaneous Items

Comment #	Page #		WHPacific Response
Comments on Scope of Work		**Comments received from: Nick Kaiser**	
0.1	3-18, task 1.2	Significant growth doesn't mean that the runway should be extended. There is no mention of a tower.	A runway extension is not assumed, it is just one element to be studied in the Plan.
0.2	5-18, task 2D	Add proximity to Aurora's city limits.	No changes to Scope of Work will be made. Location of Airport, in relation to Aurora, is mentioned in the Plan.
0.3	6-18, task 2F	Need to collect actual data for airport operations and use ODA noise study.	All available data is used in the Plan, as well as information from the noise study.
0.4	6-18, task 2.4	Include city of Aurora land use data (vision for airport and off airport land use). Include Aurora comp plan and county UGB agreement (area of mutual concern).	Scope indicates land use documents from local government will be obtained. This comment is more applicable to Chapter Two, and this information will be supplemented in that chapter at the appropriate location(s).
0.5	7-18, task 3.2	Need to have firm data on projected critical aircraft. Why not have constraints on projected aircraft types? Current actual operations data should be used for airport demand/capacity not estimated operations.	See response to #3.1. All data available at the time of the study has been used to develop the forecasts.
0.6	9-18, task 4.2	Why not look at an airport design that fits within the current constraints of the airport?	The Facility Requirements only outlines infrastructure needed to meet the forecasted demand. The next task - Airport Alternatives - is where the Plan studies the No Build alternative, which would be a design that fits within the airport's current constraints, as well as other possible layouts.
0.7	13-18, task	(land use and noise contour drawing) Look at city zoning boundaries and noise study.	Noted, the City's zoning boundary will be evaluated, as appropriate. Traffic patterns, which at Aurora State are based on the noise study, are always a consideration in developing the noise contours.
0.8	14-18, task 7.2	Who will guarantee the bonds?	The issue of bonds, including if they are appropriate, will be discussed in Chapter Seven as stated in the Scope of Work.
Comments on Meeting Documents		**Comments received from: Nick Kaiser**	
0.9	4-6	Airport operations for 2002-2003 were 62,926 (actual count).	The RENS acoustical counting program reported 62,926 operations for that reporting cycle. However, that number is an estimate, based on seasonal samples. It is not an "actual" count.
0.10	5-6	The last master plan had a notation on the airport layout that evaluated adjacent property.	It stated the area would be acceptable for airport-related development under private ownership.

0.11	6-6	The last master plan was not adopted by the county but the CIP was completed anyway?	Elements of the CIP that were implemented went through the appropriate conditional use approvals with the County, since they were not approved outright through adoption of the Plan.
Meeting #1		**Comments received from: Nick Kaiser**	
0.12	2-7	(parameters) Will not do land use evaluations. If expansion occurs livability concerns from the local community needs to be considered.	If any deficiencies are noted the Plan will consider a variety of issues, including those that impact livability.
0.13	5-7	Aurora airport should not be a reliever airport for PDX.	As stated in Chapter 1, the Airport should continue to fulfill its role as an Urban General Aviation Airport.
General		**Comments received from: Tony Holt and City of Aurora**	
		Tony Holt	
0.14	-	Chapters 1-3 have been written prior to any discussion of a vision, goals and objectives or assumptions with the PAC. This leaves a clear impression that there is an attempt to lead the discussion in a predetermined direction.	There is no predetermined direction for this Plan. Goals and issues were a significant portion of the PAC #1 discussion, as well as the Kick-Off Meeting.
0.15	-	The process is being rushed and there is not sufficient time allocated, nor enthusiasm by the Consultant and ODA, to make sure all questions are answered at PAC meetings, that the PAC fully understands the assumptions being made and knows the sources of the data being used.	This planning process includes six PAC meetings, five open houses, and one kick-off meeting, which allows all interested parties an opportunity to review and comment on the Plan. ODA and WHPacific are attempting to address all questions and comments from the PAC; however, the meetings are designed to be working sessions and some questions must be answered off-line. These questions are being addressed in this spreadsheet and are available to the PAC and public.
0.16	-	There are obvious constraints to development and expansion of this airport (only one runway, bordered by roads on four sides, limited remaining areas for development within the footprint). Yet there is no discussion of constraints.	Chapter Five, *Airport Development Alternatives* , will address these constraints - as well as others.
0.17	-	ODA has already picked a preferred activity level forecast prior to any discussion with the PAC.	ODA's draft preferred forecast was submitted to the PAC and FAA in mid-September. Based on comments received, some changes will be made to the forecast chapter before final publication, but we do not see a need to substantially change the activity levels forecast.
0.18	-	Throughout the document many general statements mention that were collected from individuals or organizations but there is no proper attribution. There should be.	Sources will be added, as appropriate. However, some sources were given a promise of confidentiality, see response to #3.29.
		City of Aurora	
0.19	-	Has ODA hired a planning consultant for this update like in 2000 and if so, who is it?	Yes, ODA has retained WHPacific, Inc. to undertake the Master Plan Update.

0.20	-	Is there an Aviation System Plan adopted by ODA or Marion County as required by OAR 660?	Yes, the Oregon Aviation Plan was published in 2007. Please refer to ODA's website.
0.21	-	Text: Mutually beneficial to city and airport to have services provided by a utility and not under separate properties; the City of Aurora's future industrial and commercial lands will be impacted by expansion of the airport and they have mutually beneficial/reciprocal relationships; reference Aurora Comprehensive Plan goals and policies;	References will be made, as appropriate, within the plan.

Aurora State Airport Master Plan Update - Comments Received on Draft Chapter One

Comment #	Page #	Comments received from: Nick Kaiser, Susie Stevens, Tony Holt, Clackamas County, and City of Aurora	WHPacific Response	Will revisions to Chapter 1 be made based on comment?
		Nick Kaiser		
1.1	1-2	Enhance safety/noise - Need to complete VFR update of preferred traffic patterns.	Noted, this will be added to the paragraph.	Yes
1.2	1-2	Goal 2 - Livability of surrounding communities should also impact future growth of airport.	Livability of surrounding communities is a consideration for both environmental and political feasibility, which is why it wasn't mentioned outright.	No
1.3	1-3	Runway extension would disrupt the area's livability and encourage the growth of bigger and louder aircraft. Airport growth needs constraints so that the surrounding areas are not negatively impacted.	Impacts of any development will be discussed with the PAC when airport development alternatives are presented in Chapter Five.	No
1.4	1-4	Keep runway 35 as the calm wind runway for noise abatement. Instrument approach on 17 needs to have written training guidelines for calm wind use.	Noted. Chapter Four discusses this issue in more detail.	No
1.5	1-5	If the airport is changed from BII to CII will the runway have to be extended?	C-II is a classification for aircraft based on approach speed, tail height and wingspan. It does not relate directly to runway length.	No
1.6	1-6	Airport use from survey - inadequate runway length is an issue for only 8% of the respondents that don't keep their planes at Aurora.	The survey is only used anecdotally; it was not intended to be a representative sample of all airport users. Data on runway usage, in relation to runway length, was aquired by other sources in addition to this survey.	No
1.7	1-11	Chart error - II should be III	Noted, chart will be revised accordingly.	Yes
1.8	1-13	What is length of Salem airport? Troutdale is a reliever airport for PDX and has an ARC of BII. What is its runway length?	As noted in Table 1A, the length of Salem's runway is 5,811 and Troutdale's is 5,399.	No
1.9	1-14	Airport role - conclusions and recommendations. Need 3rd alternative - grow within the current (physical) constraints of the airport.	This alternative will be evaluated in Chapter Five. This recommendation states the airport should continue to fulfull its role as an Urban General Aviation Activity Airport; it makes no reference to expansion.	No
		Susie Stevens		
1.10	1-2	4th bullet - add "and cite sources."	Noted, text will be revised.	Yes
1.11	1-2	Goal 2 - Add physical constraints to feasibility.	Physical constraints are a component of the financial feasibility, environmental feasibility, and political feasibility.	No
1.12	1-2	Note: This paragraph should address physical constraints as well: one runway, adjacent roads, airport footprint, etc.	This will be discussed in Chapters Four and Five.	No
1.13	1-3	1st bullet - Remove "evaluate" and insert "involve."	Noted, text will be revised.	Yes
1.14	1-3	5th bullet - Conduct proper noise study.	A noise study was conducted in 2002 and noise contours will be prepared as part of this Plan. No other noise study will be conducted as part of this project.	No

1.15	1-3	Could the appendices please be included with the next draft chapters or posted to the website?	The appendices were mailed to all PAC members in hard copy form. For future mailings, they will also be posted on the website (note, they were later added). The appendices were not included in the initial PAC emailing, because of their filesize. However, if future appendices have smaller filseizes, they too will be included in the initial PAC emailing.	Yes
1.16	1-3	Please cite the sources for the statements made in this paragraph (runway extension). Include the survey in the appendices.	Copies of the user surveys will be included as an appendix.	Yes
1.17	1-3	Air traffic control tower section: Please cite sources for these comments.	Sources will be added, as appropriate.	Yes
1.18	1-4	1st full paragraph, revise to read "…rural character [, quality of life,] and natural…"	Noted, text will be revised.	Yes
1.19	1-4	Other Airport Improvements section: Most important to have the survey and interview data to make this paragraph credible.	See response to #1.16.	Yes
1.20	1-6	Survey paragraph: Please note that there was no random or other conventional method survey. Who received the survey? Who did not? What was the percent returned of those sent out?	We will clarify the survey was not intended to be a statistical representation of airport users, along with a list of where the survey was distributed. The rate of return is difficult to account for, since the survey was also available online and copies may have been made to those that we distributed; however, we will attempt to quantify a firm number.	Yes
1.21	1-7	2nd paragraph: This number does not appear to tied in with graph on 3-10.	We bought IFR data from 2 different providers. The 14,186 IFR ops for Oct. 2007-Oct. 2009 came from FlightAware. Addresses in that database were easy to sort, which helped to mail surveys & analyze service area. Later, the master plan was put on hold for several months. When the project started up again, we needed more up-to-date data for forecasting. We subscribed to GCR's less expensive Airport IQ Data Center to obtain IFR data used in Chapter 3. In comparing calendar year 2008, FlightAware shows 3,606 arrivals and 3,664 departures, or 7,270 operations. For the same period, GCR information shows 3,226 arrivals and 2,462 departures, or 5,688 operations. Perhaps FlightAware is capturing more of the flight plans filed after departure and those cancelled before landing. We will add a source (FlightAware) to the reference in Chapter 1 & change the estimate of IFR ops at the top of page 3-10 from "5% to 7% of total traffic" to "5% to 10% of total traffic." This does not affect the forecasts summarized on 3-32.	Yes
1.22	1-14	Troutdale airport is in Multnomah County.	Noted, text will be revised.	Yes
		Clackamas County		
1.23	1-2	Last bullet top of page. The PAC requested a vision at the beginning of the process.	Yes, however, the Plan initially did not include a vision statement at all (see PAC #1 summary: "The Plan will not: … develop a vision statement for the Airport.") This was a compromise.	No

1.24	1-2	Goal 2 - 1st sentence. This is not an accurate statement. Not all the PAC members stated this as a concern. Some PAC members share the community's concern.	It is our recollection the PAC members who are airport users expressed this opinion. However, text will be revised to state "Some PAC members who are airport users fear …"	Yes
1.25	1-3	Runway Extension - entire paragraph. This statement is based on 2009 survey? Survey responses should be available on webpage for review.	See response to #1.16.	Yes
1.26	1-3	Air Traffic Control Tower - last sentence. What is meant by "slowed down?"	The FAA and ODA have postponed some critical decision-making points in the ATCT process to include information from the Plan once it becomes available.	No
1.27	1-4	Other Airport Improvements. The survey responses should be available on wepage and to the PAC.	See response to #1.16.	Yes
1.28	1-5	Aurora State Airport's Regional Role. Is the reference to "spin-off" addressing off site businesses the airport serves?	From the 2007 OAP: "Spin-off impacts are calculated using impact multipliers, which are used to reflect the recycling of dollars through both the regional and state economy… Spin-off impacts are often reported as indirect and induced impacts."	No
1.29	1-6	5th paragraph. Implies that there is a possibility that Airport will become a reliever. Is that really the intent here, especially when it is concluded on page 1-15 that commercial service is not an appropriate future role for the Aurora Airport. Consultant clarified reliever airport during meeting - does not include commercial aircraft but does include business aircraft that meets the standards in chapter 1, page 11.	Correct, reliever airports do not provide commercial (airline) service.	No
1.30	1-15	Bullet at top of page. See comment for page 1-6.	See response to #1.29.	No
1.31	1-15 & 1-16	4th paragraph, last paragraph 1-16. What would be the "trigger" to designate the Aurora Airport as a reliever airport, and why Aurora when it was stated above the Salem [airport] is the better choice? What is the process?	The "trigger" points are generally those described in the bullets on pages 1-15 and 1-16. However, each airport is reviewed on a case-by-case basis. Most likely, at Aurora State, the trigger would be if any of the three entities (ODA, Port of Portland, or FAA) initiated an individual review.	No
		Tony Holt		
1.32	1-2	Goal 2 Heading says "as feasible" Several areas of feasibility are listed. However, this section needs to recognize the physical constraints to airport expansion such as one runway, bordered by roads on four sides, limited areas remaining available for development within the footprint, etc.	See responses to #1.11 and 1.12.	No

1.33	1-3	First bullet, change word "evaluate" to properly describe the meaning of this bullet (it is meaningless currently)---including assessing the effect of any proposed changes on the livability of airport neighbors. **Add bullet**-Perform noise study (to measure potential impacts of proposed developments). **Runway Extension paragraph**-- Please provide proper attribution to the many statements loosely made in this paragraph such as 'Some Airport users and businesses favor a runway extension of up to 1,500 feet'—which?. 'Airport neighbors are concerned that a runway extension would unduly disrupt the area and encourage more and louder aircraft' --who stated that? **Air Traffic Control Tower paragraph**—again, need proper attribution for statements made.	See responses to #1.13, 1.14, 1.16, and 1.17. Sources will be added for statements regarding airport neighbors and noise, as well.	Yes
1.34	1-4	2nd para "Airport neighbors are----". **Add to this sentence** 'and their quality of life'. **Calm Wind Runway Change section** Need to explain this move has never lessened the noise over Charbonneau so to revert to 17 is not a major concern. **Other Airport Improvements** for complete transparency, need a list of individuals interviewed and those given survey with an explanation of how they were chosen, either here or in a table.	See responses to #1.18, 1.27, and 3.29. The calm wind runway section will be supplemented.	Yes
1.35	1-5	2nd Section, first sentence. How has Aurora Airport suddenly changed from a **rural** GA airport to an **urban** GA airport? Note: the Oregon 'Through the Fence' Bill only applies to rural airports.	Aurora State has always been defined as an Urban GA Airport, as it lies on the southern extents of the Portland-Vancouver-Beaverton Metropolitan Statistical Area (MSA) and is within the Salem MSA. It was included in SB 680 explicitly as an exception to the rural airport requirement.	No
1.36	1-7	2nd para the **14,186 IFR operations** does not seem to tie to the graph on page 3-10	See response to #1.21.	Yes
1.37	1-14	Page 1-14 6th para-error-**Troutdale is not in Washington County**.	See response to #1.22.	Yes
1.38	14-Jan	Para 7-again refers to Aurora as an urban airport.	See response to #1.35.	No
1.39	1-16	4th para- refers to 79,953 operations at Aurora on a 10 year average. **This calculation needs to be carefully explained to the PAC.**	The footnote on p. 1-16 mistakenly says it is a ten-year average, when in fact 1998-2008 is 11 years. That footnote will be corrected to say 11 instead of ten. Using averages instead of individual years discredit year-to-year fluctuations. 79,953 is the average of the 1998-2008 total operations in Table 3K, p. 3-23.	Yes
1.40	-	--"PAC members who are airport users fear community concerns will unduly constrain growth."	See response to #1.33.	Yes
1.41	-	--"Some airport users report there are times that they must lessen their airplanes weight in order to depart---"	See response to #1.33.	Yes
1.42	-	--"Some Airport users and businesses favor a runway extension of up to 1,500 feet." (but not mentioned in the survey)	See response to #1.33.	Yes
1.43	-	--"Airport neighbors are concerned that a runway extension would unduly disrupt the area and encourage more and louder aircraft."	See response to #1.33.	Yes
1.44	-	--Re changing calm wind runway back to 17, "noise impact would move with traffic, a concern for Airport neighbors."	See response to #1.34.	Yes

1.45	-	One goal is “evaluate all communities and jurisdictions in the Airport’s influence area.” Meaning?	See response to #1.33.	Yes
1.46	-	When did Aurora Airport go from being classified as a Rural General Aviation Airport to an Urban General Aviation Airport.	See response to #1.35.	No
1.47	-	-You want to “determine” Airport’s future role rather than predict it.	There is no predetermined direction for this Plan.	No
1.48	-	-No discussion of possible constraints to growth such as one runway, hemmed in by roads, current zoning, etc.	See responses to #1.11 and 1.12.	No
1.49	-	-No mention of livability of airport neighbors as goal.	See response to #1.2	No
1.50	-	-An MP goal should be to predict demand as accurately as possible.	It is, see bullet #4 on page 1.2.	No
1.51	-	-An MP goal should be to evaluate potential noise and traffic impacts for any new development.	These are included as Goal #3, "Consider all the off-airport impacts of Airport development." Impacts to ground transportation are cited specifically, and noise contours will be developed as part of the Plan.	No
1.52	-	-Should show a list which individuals/organizations responded to the survey?	See response to #1.16.	Yes
1.53	-	-Should show a list of which individuals/organizations were interviewed?	Sources will be added, as appropriate. However, some sources were given a promise of confidentiality, see response to #3.29.	Yes
1.54	-	-How do the Oct 2007 to Oct 2009 IFR numbers on page 1-7 fit with Exhibit 3D, page 3-10?	See response to #1.21.	Yes
1.55	1-16	Says the average operations at Aurora from 1998-2008 were 79,953 operations; how calculated and isn’t this meaningless?	See response to #1.39. Average operations at both Aurora and PDX were used to perform the calculations associated with the reliever designation. Using averages instead of individual years discredit year-to-year fluctuations. The reliever calculations help assess the role of the Airport. In the past, reliever airports received set-aside funding in the Airport Improvement Program (AIP). This is not the case with the current (expired) legislation covering the AIP, although reliever airports receive higher priority than general aviation airports for some discretionary funding, according to the AIP Handbook. Because the authorizing legislation for the FAA has expired and the content of new legislation is unknown, we were hesitant to go into much detail. We will summarize this information and add it to the chapter so that it seems more meaningful.	Yes
		City of Aurora		
1.56	1-2	Goal 3 has good language that needs to be referred to often in other parts of the plan update, “Consider all the off-airport impacts of Airport development; minimize negative impacts and maximize positive impacts”	All goals are used to evaluate the proposed preferred alternative in Chapter 5, and are used in the decision-making process.	No

1.57	1-3	"For example, the lack of sewer service is a major constraint for having a restaurant at the Airport…" Add text: "While Oregon Department of Aviation recognizes the complexities of Oregon's land use system and potential need for upgrades to City of Aurora utilities prior to annexation, ODA is generally supportive of annexation of the Aurora Airport by the City of Aurora due to the economic growth potential for the airport if it were connected to city services".	Noted, text will be revised.	Yes
1.58	1-12	Page 1-12 under Aurora State Airport heading, add text: "Located less than a quarter mile from the City of Aurora"	See response to #2.1.	Yes

Aurora State Airport Master Plan Update - Comments Received on Draft Chapter Two

Comment #	Page #	Comments received from: Nick Kaiser, Susie Stevens, Tony Holt, Clackamas County, and City of Aurora	WHPacific Response	Will revisions to Chapter 2 be made based on comment?
		Nick Kaiser		
2.1	2-1	Airport location - correction - airport is 1/3 mile from the city limits.	Noted, text will be revised.	Yes
2.2	2-7	Airspace - Need written guidelines for IFR on 17 when calm wind runway 35 is used during VFR conditions.	Chapter Two reports existing conditions. ODA is working with FAA to create procedures to reduce the noise impact to surrounding communities.	No
2.3	2-8	Use noise study	A detailed discussion of the noise study is in Chapter Four.	No
2.4	2-8	Land use - Airport is public Zone - If airport becomes an airport zone what changes other than outright uses will be allowed?	No other changes would occur.	No
2.5	2-9	RPZ - How will this change with runway extension?	Chapter Five discusses alternative Airport Layouts, along with design standards.	No
2.6	2-9	Human factors - consultants indicate there are currently 87,000 operations and the plan projects there will be 100,000 by the end of 2010? Does no make sense? There continues to be noise sensitive issues because of flight over populated areas.	See response to #3.19. 87,345 is the number for 2008 from the Terminal Area Forecast. 100,224 is the number estimated by multiplying 2010 based aircraft (432) by average operations per based aircraft (232). Will revise p. 2-9 to be more clear.	Yes
2.7	2-10	Golf course is on Airport Road. (correct)	Noted, text will be revised.	Yes
2.8	2-10	Social impact - If the state has to acquire land and business and homes are relocated, that is beyond constraint.	This is a general statement, quantifying what would be considered a "social impact" per the National Environmental Policy Act definition. Any proposed land acquisition would undergo NEPA review and the impact would be further assessed.	No
2.9	2-11	Farmland - What happens during the process of coordinating with NRCS?	NRCS coordination is conducted by FAA per NEPA requirements, once a project is identified and if the project includes a taking of farmland. Through consultation, the NRCS would need to be shown there's no feasible and prudent alternative to taking farmland for the use.	Yes
2.10	2-13	Wetlands - Are they not jurisdictional?	A wetland delineation was not conducted, so this is unknown. A delineation would be prepared if any development action could affect the areas in question.	No
2.11	2-14	Controversy - Not correct - There are opinions that the airport should exist but growth should have some constraints to insure livability in the community.	Noted, text will be revised.	Yes
2.12	2-15	Terminal area forecast of operations at 87,345 is shown as "actual data." How is this measured?	See response to #3.13. We will change the word "actual" to "estimated."	Yes
2.13	2-16	Fuel fees - 2010 down 12% from 2009 and down 8% from 2008. This is indication that airport activity is going down.	See response to #3.3. Not all fees were paid on time.	No
		Susie Stevens		
2.14	2-7	Other Support Facilities: Please add Wilsonville to this paragraph.	Wilsonville will be added.	Yes

2.15	2-7	Airspace: Note - From the City of Aurora only, but not to the north. What is the source of this sentence?	Overall complaints have been reduced and source will be given. Text will clarify that overall complaints have reduced, but complaint levels from the north have remained at a consistent level.	Yes
2.16	2-11	Farmland: Please add information from the Oregon Department of Agriculture on the designation of Foundation farmland.	Information will be added.	Yes
2.17	2-14	Other Issues: Add a paragraph on (vehicular) traffic.	Issues relating to vehicular traffic will be added to the environmental conclusion section.	Yes
2.18	2-15	Regarding the Terminal Area Forecast: It would be more informative to have a couple sentences explaining how this forecast is determined.	See response to #3.45.	Yes
		Clackamas County		
2.19	2-2	Area Topography. Incorrect: Not part of Mt. Hood National Forest	Marion County reports the forest extends into Marion County, as does the Clackamas River Ranger District Office.	No
2.20	2-2	Community and Airport History. Why not include when tower was 1st put on ALP? This will provide clarification on all structures planned.	Noted, this will be included.	Yes
2.21	2-3	Airfield Facilities. How often is runway rated? What type of aircraft does runway support - commercial, business? Is there a limitation on runway strength and future strength?	The runway is rated every three years. The runway supports General Aviation, which includes private and business operators but does not include commercial (airline) operators. Discussions relating to runway limitations are provided in Chapters Four and Five.	Yes
2.22	2-8	3rd paragraph. Unclear sentence, please restate for clarity. Are you saying that allowed uses on adjacent lands must be compatible with the airport imaginary surface overlays?	Statement will be clarified. The FAA does require that airport sponsors - to the extent of their ability - restrict zoning on adjacent lands and lands within an airport's immediate vicinity to compatible land uses.	Yes
2.23	2-8	Surrounding Area Land Use. This statement gives the impression that adjacent lands are RRFF5 and the golf course. Restate as "… further north of the airport are RRFF-5 zoned lands and a golf course."	Statement will be clarified.	Yes
2.24	2-8	Surrounding Area Land Use. Did not address local, regional or state land use laws and regulations. As long as there is not a proposal to expand the airport runway or locate a facility off of the ALP boundaries the MP does not have to address these regulations, however any expansion will require addressing local, regional and state laws to include an exception process. Then again the FAA guidelines in accordance with the FPPA will prohibity the expansion of the airport boundary on high value farm lands.	This chapter presents the existing conditions. Any actions proposed in this Plan - in subsequent chapters - will address local, regional and state land use laws and regulations.	No
2.25	2-9	1st paragraph. Clackamas County's Capital Improvement Plan (CIP) 2006-2008 Update shelved the Arndt Rd/99E (#267) in 02-23-05.	Noted, text will be revised.	Yes

2.26	2-9	2nd to last sentence. Is this an FAA requirement in response to PAC and community's concerns relating to noise impacts?	No, this is a standard planning requirement for airports. Occasionally FAA will waive this requirement for smaller airports. It has always been in the Scope of Work for this project.	No
2.27	2-10	1st paragraph. In the 2002 noise mitigation study, where was the noise redirected with the implementation of use of Runway 35? Need to see this runway on a map to know where it is.	Please refer to the exhibits for a visual of Runway 17/35. Aircraft landing Runway 35 are approaching from the south.	No
2.28	2-11	4th paragraph. This implies that extension of the airport lands cannot be achieved. The surrounding farmlands are considered high value farmland according to the 1985 soil survey of Clackamas County Area, Oregon, that identifies surrounding soils as type #3 Amity silt loam and #88 Willamette silt loam. Other high value soils surrounding the airport property include #68 and #69 Newberg loam.	Any proposed improvement off airport would undergo NEPA review, in which this concern would be addressed. See response to #2.9.	No
2.29	2-14	Conclusion. The Master Plan goals stated in the beginning of this document also commit the MP to include"… evaluation and minimum impacts of airport growth to include transportation."	See response to #2.17.	Yes
		Tony Holt		
2.30	2-7	4th para, second last sentence-**"complaints from neighboring Aurora have dropped---"**should note that they have not dropped at Charbonneau which is now suffering the wide spectrum of take-off noise.	See response to #2.15.	Yes
2.31	2-9	last para-the PAC needs to properly understand how the current annual operations number quoted of 87,345 was arrived at. Also, the sentence 'Because the majority of the adjacent land is in agricultural use, the number of noise sensitive uses is minimal' is ludicrous given the adjacent residential areas of Aurora and Charbonneau	See response to #3.45. When compared to other urban airports, there are fewer noise sensitive land uses. However, that statement does not negate the impacts at Aurora State.	
2.32	2-11	3rd para should also quote the Oregon Department of Agriculture study classifying areas as either Foundation or Important or Conflicted farmland. The area around the Airport is classified as Foundation farmland the D of A's top rated classification.	See response to #2.16.	Yes
2.33	2-14	2nd para who are the community members who **'desire closure of the Airport'**? 3rd para- under "Other Issues" traffic impacts should be mentioned.	See response to #2.17. Source will be added.	Yes
2.34	2-15	**Table 2D Operational Records**. The PAC needs to know how this was developed. It is fundamental to the key forecasts.	See response to #3.45.	Yes
2.35	2-14	Page 2-14, "There are some members of the community who are against airport growth and desire closure of the Airport and release of the land to other uses." Who are they??	Source will be added.	Yes
2.36	-	"An accurate inventory helps produce an aviation demand forecast---"	--	--

2.37	2-7	"Complaints from neighboring Aurora have dropped since this designation (calm wind 35) was enacted." Maybe, but not from Charbonneau.	See response to #2.15.	Yes
2.38	2-9	Under 'Human Factors' and 'Noise' talks about noise sensitive land uses and says "the number of noise sensitive land uses is minimal' because the majority of the adjacent land is in agricultural use.	See response to #2.31.	No
2.39	2-11	Under 'Farm Preservation' should also reference the Oregon Department of Agriculture study.	See response to #2.16.	Yes
2.40	2-14	'Conclusion' "Beyond controversy over noise and airport expansion, there do not appear to be any significant environmental issues on the Airport or in the airport vicinity." What about traffic??	See response to #2.17.	Yes
		City of Aurora		
2.41	2-1	Page 2-1 under Airport Location and Access hearing: "The city of Aurora is located approximately ~~one~~ **one-quarter** mile southeast of the Airport".	See response to #2.1.	Yes
2.42	2-6	Page 2-6 under Airport Support Facilities heading: Add text: "Surrounding communities have expressed concerns that additional growth at the airport and the potential for airport expansion will have negative impacts upon their water supplies and/or water quality. Advanced planning and feasibility assessments regarding the airport's ability to meet water, sewer, and fire protection needs for development and expansion are of concerns. While not required as part of the Airport Master Plan Update and not included in this document, the ODA recognizes the importance of completion of this work in the future. ODA is supportive of pursuing funding options for such studies and supports surrounding communities in their pursuit of funding for such studies".	Noted, text will be added.	Yes
2.43	2-6	Page 2-6 under Airport Support Facilities heading and Utilities subheading, add text: "While Oregon Department of Aviation recognizes the complexities of Oregon's land use system and potential need for upgrades to the City of Aurora utilities prior to annexation, ODA is generally supportive of annexation of the Aurora Airport by the City of Aurora due to the economic growth potential for the airport if it were connected to city services."	A reiteration of this point will be made. See response to #1.57.	Yes
2.44	2-8	Page 2-8 under the Surrounding Area Zoning and Land Use heading, please make reference to the Urban Growth Boundary Coordination Agreement with Marion County that has a section on the Airport and surrounding lands as an Area of Mutual Concern, and the IGA signed between ODA, Marion County and the City of Aurora. I can provide copies of these documents if needed.	Noted, text will be supplemented.	Yes

2.45	-	Reference should be made to the following City of Aurora Comprehensive Plan Goals and Policies (I can make a copy of the Comp Plan available if needed):	Noted, text will be supplemented.	Yes
	-	Goal 14- Growth and Urbanization. Policy 4: The city will seek the funding to evaluate the impacts of development of the industrial and commercial properties at the Aurora Airport and on surrounding lands to determine the role of the Aurora Airport in relationship to the Overall Objectives of the Aurora Comprehensive Plan and to identify formal and informal relationships needed to achieve mutually beneficial goals.		
	-	Goal 9- Economic Policies. Policy 1: The City will work closely with Marion County, the Oregon Department of Aviation, and the Oregon Department of Economic and Community Development to evaluate and balance the net value (cost/benefit) of the industrial and commercial potential of the Aurora Airport and surrounding lands. The City will strive to minimize potential land use conflicts within the mutual planning area in an effort to maximize the livability of the community.		
	-	Goal 11-Public Facilities. Policy 2 and 8: The City shall consider extension of a sewer and water line to the Aurora Airport industrial district if it is determined by the City and county that: a. The City is the most logical service provider; and b. The extension benefits the City economically; and c. Precautions prevent hook-ups to the line by property owners in the rural area between the urban growth boundary and airport; and d. In full compliance with applicable laws.		

Aurora State Airport Master Plan Update - Comments Received on Draft Chapter Three

Comment #	Page #	Comments received from: Nick Kaiser, Susie Stevens, Tony Holt, and Clackamas County	WHPacific Response	Will revisions to Chapter 3 be made based on comment?
		Nick Kaiser		
3.1	General	Why are the projections unconstrained? There should be some parameters. The last master plan one of the constraints was an ARC of BII.	Airport master plan forecasts of aviation demand are usually unconstrained. ODA did not feel it necessary to constrain the forecasts, particularly since there is undeveloped land at the Airport (ODA and private) for hangars, etc. ODA may elect to constrain the forecasts later in the planning process, as happened in the 2000 master plan update. (During the last master plan, ODA decided to constrain the forecasts by not meeting design standards for Airport Reference Code C-II.) Identifying how to constrain the future is much easier when you have an idea what the unconstrained future might be. The FAA typically produces unconstrained forecasts. The FAA's annual Terminal Area Forecast (TAF) (http://www.faa.gov/data_research/aviation/taf_reports/media/TAF%20Summary%20Report%20FY%202009%20-%202030.pdf) contains forecasts for over 3,000 airports. Page 3 of the TAF report published December 2009 says, "The TAF assumes an unconstrained demand for aviation services based upon local and national economic conditions as well as conditions within the aviation industry. In other words, an airport's forecast is developed independent of the ability of the airport and the air traffic control system to furnish the capacity required to meet demand." This information will be added to Chapter Three to more clearly indicate why the forecasts are unconstrained.	Yes
3.2	3-2	"Critical Aircraft" current analysis is an unconstrained mix. Where do you draw the line on size of plan?	Decisions about the size of the plan will be made later.	No
3.3	3-3	2010 trend is still down so how can operations go up?	Nationwide aircraft shipments were down the first quarter of 2010, although billings were up (p. 3-3). At Aurora, IFR traffic was up 22% for partial year 2010 (p. 3-10) and fuel flowage resumed growth in 2009 (p. 3-8).	No
3.4	3-5	Need to label the charts 3A and 3B.	Exhibits 3A and 3B have titles and sources, so the comment intent is not clear.	No
3.5	3-7	With the slight increase in US active aircraft and Oregon trending below that how can we show such a large increase in base aircraft? How can you conclude that operations will increase at the same rate as based aircraft?	Aurora's historical 2000-2009 growth is 7.0% annually (233 based aircraft in 2000 growing to 427 in 2009), while the national increase for 2000-2009 is 0.6% annual (Table 3A on p. 3-5). So, it is reasonable that Aurora's future growth is higher than the national forecast (1.36% compared to 0.9%). Using a constant OPBA for forecasting future general aviation operations is common in airport master plans. Historical info at Aurora shows operations sometimes go down when based aircraft go up and vice versa.	No
3.6	3-8	Aviation gas dropped 47% in 2008 and the increase in 2009 and 2010 is mainly jet fuel. Jets are a small portion of based aircraft so operations should have not increased at levels indicated.	Fuel is sold to transient as well as based aircraft. Jets have larger fuel tanks and on average are flown more hours than other fixed wing aircraft. This explanation will be added.	Yes
3.7	3-9	2002 & 2003 operaions were measured at 62,926. Chart 3C shows approximately 78,000?	See Table on p. 3-23 for the numbers in Exhibit 3C and see response to #3.13.	No
3.8	3-10	IFR operations in 2009 is approximately the same as 2002-2003. 2010 continues to be a bad year.	See response to #3.3. IFR is growing in 2010.	No
3.9	3-13	I don't see the correlation between the population growth in the core area and licensed pilots.	We did not specifically correlate population growth with pilot growth.	No
3.10	3-16	Based Jet aircraft went from 33 in 2007 to 21 today.	Noted. However, the number in 2006 was only 6. We tried to look at trends over time.	No

3.11	3-18	Based aircraft increase is not following the socioeconomic trends.	Based aircraft forecast is 1.36% annual growth. Average annual population growth in service area is 1.53% (p. 2-13). Metro forecasts for nonfarm employment are between 0.7% and 1.8% annual (p. 3-14).	No
3.12	3-21	Using preferred forecast 1.36% the based aircraft is too optimistic. It will not follow population growth or other socioeconomic trends. For based aircraft to increase at the forecasted rate there will need to be a lot more hangar space. (constraint?)	See response to #3.11. Hangar space needed for forecasts will be in Chapter Four.	No
3.13	3-22	The last actual operations recorded was 2002/2003 at 62,900. No actual data was taken in 2008.	Acoustical counts in 2002/2003 were estimates based on samples (as reported on ODA's website). We have not been able to account for the difference in operations reported from acoustical sampling on ODA's website and the operations reported in the Terminal Area Forecast, which the FAA says come from ODA. We will change the word "actual" to "estimated".	Yes
3.14	3-23	OPBA of 232 means there is little itinerant traffic (according to FAA guidelines). Table shows heavy itinerant traffic? The OPBA from the survey doesn't make sense?	We noted that FAA's OPBA guidance does not relate well with Aurora having considerable itinerant traffic, hence the discussion on p. 3-23 and 3-24. The survey was a random sample, but it did cover a wide range of aircraft types and convey average OPBA per fixed wing aircraft similar to FAA's historical records of aircraft and operations.	No
3.15	3-25	Preferred forecast 1.9% - At 232 OPBA the itinerant will be lower so how do you get to 1.9%/year?	In 2008, operations were 87,345 and the number of based aircraft was 422. The OPBA was 207, below the average of 232. 1.9% average annual growth is from 87,345 in 2008 to 131,312 in 2030.	No
3.16	3-26	Why large growth in itinerant from 51,000 to 85,000?	Itinerant operations are those that are not local (touch and go training, primarily) and are performed by both based and transient aircraft. The assumption is that training operations will comprise a slightly lower portion of total operations in the future, which often happens when airports grow busier. However, the growth in itinerant operations (2.1% per year) is not much different than the growth rate for total operations.	No
3.17	3-27	With 21 jets in 2010 what is the correct % of the jet capable airports.	We do not have 2010 information about the other airports, so cannot calculate that.	No
3.18	3-27	With 21 based jets and 432 total based aircraft (5%) how do you get to 13% of operations growing to 18%?	Business jet aircraft are used more often than piston aircraft. From Tables 3A and 3B, compare national averages by aircraft type. Piston aircraft are flown 83 hours per year and jet aircraft are flown 252 hours per year on average. Also, since it is jet capable, and most of the 46 other airports in the service area are not, Aurora will be used more by transient jet aircraft than most of the other airports. This explanation will be added.	Yes

3.19	3-28	There is a sensitivity to using an inflated operations per year number. Just going from 100,000 to 87,000 the peak hour operations goes from 40 to 34 and 80,000 gets you 32.	This comment is one of several concerned with inaccurate or inflated numbers of aircraft operations. The FAA uses aircraft operations estimates from airport owners to determine the number of aircraft operations at non-towered facilities, and assesses them for their reasonableness before publishing them in the Terminal Area Forecasts. See p. 3-22 through 3-24 for a discussion of different ways to measure operations at non-towered airports, FAA guidance for ratios of operations per based aircraft, and analysis of Aurora's operations per based aircraft compared to other airports in the region. The FAA's records of aircraft operations at over 2,000 airports across the nation are estimates, so reliance on estimates for planning is not unique to Aurora State. Here is how the number of aircraft operations could affect the requirements in Chapter Four: . The capacity analysis uses operations numbers. (However, the analysis will show that the runway has the capacity for many more operations than are estimated to occur at the Airport now or in the 20-year future.) Also, peak operations are used to project the amount of transient aircraft parking apron needed in the future. These projections help in planning the future layout of the Airport. However, neither ODA nor private entities will build more apron until actual need is demonstrated.	No
3.20	3-29	What % of the Aurora based jets is the runway design for?	Airports are designed for transient airplanes as well as based airplanes; this is not something a master plan would normally calculate.	No
3.21	3-29	Do we want to go to ARC C and open the door to much larger jets? What is max weight of jets in C category?	The standards for ARC C-II will be spelled out in Chapter Four, along with weight information about jets in C category that use the Airport. The decision about meeting those standards will be made later.	No
3.22	3-29	How many planes listed in the II category fit the weight restrictions (45,000 dual) currently at the airport? What increase would the runway weight capability have to be to fit the critical aircraft?	All or nearly all the current based aircraft have maximum takeoff weights below 45,000 pounds. The current and forecast critical aircraft mentioned on pages 3-30 and 3-31 weigh 23,500 and 36,100.	No
3.23	3-30	I thought that the current ARC was BII?	The Airport is now designed to meet ARC B-II standards. Operations at the Airport now meet the threshold for the ARC to be C-II.	No
3.24	3-30	What are the weight design specs fro ARC CII? What are the weight design specs for the Astra 1125 and Cessna Citation (X)? Is it 36,000# for both? Are the dual wheel? Footnote shows that ARC CI and CII have the same max takeoff weight?	ARC is based on approach speed, wingspan, and tail height, not weight. Aircraft in one ARC can and do have different weights. More information about different weights of business jets will be in Chapter Four.	No
3.25	3-30	Since 2009 C category jet operations are low and if you used 2009 and 2010 you would probably be below the 500 critical operations.	See p. 3-10. IFR Traffic is up 22% in 2010 compared to 2009, so that is probably not the case.	No
3.26	3-30	What are the runway design specifications for ARC CII? What is the Runway length specs for the Critical aircraft?	This will be in Chapter Four.	No
		Susie Stevens		
3.27	3-1	1st paragraph: Constrained projections should be part of the Master Plan if there is the possibility that ODA may choose to not meet the unconstrained projections.	See response to #3.19.	-
3.28	3-5	Oil prices: This seems unrealistic; perhaps a couple of other sources will provide credibility.	The oil price assumption is in the FAA's forecast for aviation activity nationwide (*FAA Aerospace Forecasts Fiscal Years 2010-2030* , March 2010) and is based on Global Insight's October 2009 oil price forecast. This is simply part of the description of the FAA's latest national forecasts. We don't have sufficient data about Aurora activity to distinguish the effect of high fuel prices in 2008 from effects of the recession or other factors in 2008. High fuel costs usually influence discretionary/recreational flying more than business travel.	No

3.29	3-10	Regarding business interviews: It would be helpful to know which businesses provided this information.	We promised those businesses confidentiality because they compete with each other. If there are any businesses at the Airport that believe this paragraph misrepresents their activity or projections for the future, we will delete the paragraph.	No/Yes
3.30	3-12	I suggest a paragraph that notes that Marion County is the entity that approves zoning and land use changes.	See Chapter Two, page 2-9: "The entire Airport is zoned ... in the Marion County Zoning Code. Marion County is the planning and building permit authority for the Airport."	No
3.31	3-16	Last paragraph: It would be interesting to see, maybe in the appendix, the Table 3I recalculated without Southend Airpark's growth. Sort of like eliminating high and low numbers to get a better average.	We may have mistakenly implied that the Southend Airpark was the only cause of the market shift and will revise the text to mention that the development and removal of hangars at other airports in the region may have contributed to the shift in market share. For example, the privately owned Evergreen Field in Vancouver with up to 165 aircraft closed in 2006 (http://www.airfields-freeman.com/WA/Airfields_WA_SW.html#evergreen). Several other private airports in the region closed between 1998 and 2007. In 2008, Portland International Airport removed 18 hangars for a road improvement project.	Yes
3.32	3-21	Preferred Based Aircraft Forecast: I realize PAC members may feel like we are going backwards, but this is such a critical paragraph. I suggest we discuss the assumptions made in choosing the Preferred Forecasts.	Noted for Dec. 9 meeting.	-
3.33	3-22	It's frustrating that we can't get an accurate count. Using the estimated forecast results in an operation every 6 minutes, 24 hours a day, 365 days per year. This seems too high.	See response to #3.19.	-
3.34	3-23	It would be good to note how the survey was done; how many sent, how many returned, etc.	See Appendix C. It is difficult to estimate how many questionnaires were distributed, but we'll try to quantify this more. See response to #1.20.	Yes
3.35	3-29	Last paragraph: It would be helpful to have a table showing the numbers of piston and turboprop aircraft operations, even if they are estimates. This relates to the ideas expressed at the first PAC meeting of a "vision" for the airport - what do the majority of users want. In 2000, ODA decided to constrain the forecast by keeping the ARC BII (pg 3-28). We should discuss this idea.	See Table 3M, p. 3-27. For a response to the comment about vision, see the response to comment #1.23.	No
3.36	3-32	With over 70% of the projected operations by piston or helicopter for the next 20 years, improvements should be geared to serve the majority of users.	Chapter Four will address the needs of piston and helicopter users. Following FAA guidance, airfield design is for the most demanding aircraft in regular use and then the airfield is adequate for all the less demanding aircraft.	No

3.37	-	In reference to the data and text on pages 3-28 through 3-31, is a designation of ARC C-II mandatory?	Probably not. The obligation to improve the Airport to meet demand is not in the 39 assurances that ODA makes when accepting Federal Airport Improvement Program grants. However, it is possible that the FAA will not fund a future airfield project if does not meet the design standards for the ARC. The FAA's guiding principles for investing in airports include: "Airports should be safe and efficient, located at optimum sites, and developed and maintained to appropriate standards," and "Airports should be flexible and expandable, and able to meet increased demand and to accommodate new aircraft types." On the other hand, cost beneficial investing is another guiding principle for the FAA, along with "Airports should be compatible with surrounding communities, maintaining a balance between the needs of aviation and the requirements of residents in neighboring areas." We believe the best time for deciding whether or not it is feasible to meet ARC C-II standards is after we know the impact of meeting those standards, later in the process. (The guiding principles are in the National Plan of Integrated Airport Systems (NPIAS) 2011-2015, p. 3, http://www.faa.gov/airports/planning_capacity/npias/.)	No
		Clackamas County		
3.38	-	Forecast Growth Rate for Jets. … It would seem that the linear trend would not be a valid predictor of future growth. Is there any factual basis for predicting that the rapid growth that resulted from the opening of the Southend Airpark will or can continue? Is there room within the existing airport boundaries or sufficient land available outside the airport? Zoning maps indicate that there is not. Is the ODA aware of any plans to change the surrounding zoning?	We agree that growth in based jet aircraft will not continue at the 5.9% historical growth rate. The 4.5% growth rate for based jets is substantially less than the historical rate, but comparable to the 4.3% annual growth from 2010 to 2030 that the FAA projects for jets nationwide (Table 3A). The forecasts are unconstrained. Evaluating the amount of land available will be in Chapter Four. If any change in zoning is contemplated, it will be later in the planning process.	No
3.39	-	Critical Aircraft. Is there any reason why the "critical aircraft" is different than the predominant aircraft of last year? How does this meet the "regularly" or "substantially" standards set forth on page 3-28?	The prevalent or predominant jet aircraft is the model that uses the Airport the most. This discussion just expands on what Table 3P shows. The most used aircraft is not the critical aircraft. The critical aircraft is the most demanding that regularly uses the Airport. The predominant jets in 2007 and 2009 were Airport Reference Code (ARC) B-I and B-II. ARC C-II has more demanding design standards (generally larger safety clearances) than ARC B-I or B-II, as Chapter Four will show. We will try to explain the distinction between predominant and critical for better clarity.	Yes
		Tony Holt		
3.40	3-1	1st para, 3rd sentence-**"These projections are unconstrained and assume ODA or others will be able to develop the various facilities necessary to accommodate based aircraft and future aircraft operations."** This is a fatal flaw in the conclusions so far. Constraints to growth must be considered in producing any accurate operations forecast(s).	See response to #3.1.	-
3.41	3-5	last para, the statement that **oil prices will not exceed $100 before 2025** is ridiculous given the limited supply of new sources of petroleum and increases in demand once the current worldwide recession is over. What is the source?	See response to #3.28.	-
3.42	3-9	**Exhibit 3C Historical Aircraft Operations at Aurora State Airport**. On the following page it is admitted that this is an estimate so Exhibit 3C should show that. How were these data it compiled? Sentence above Exhibit 3C says' The FAA keeps records of airport operations reported by airport owners'. Please explain this.	We will add that the airport owners estimate the operations they report to the FAA. Airport operators report estimated operations on periodically updated http://www.gcr1.com/5010web/airport.cfm?Site=UAO) and the FAA Airport District Office in Seattle reports numbers to Headquarters annually.	Yes

3.43	3-10	Exhibit 3D It is hard to believe that out of supposedly **90,000 total operations at Aurora in 2009 only 5,000 were IFR!!** Please confirm and supply source	We realize from our line-by-line analysis of jet IFR operations that quite a few IFR operations are not documented in the IFR records from GCR (http://www.airportiq.com/) because flight plans are filed after takeoff or cancelled before landing. We documented those unrecorded jet operations to identify the appropriate airport reference code, but jets account for less than half of the IFR records. When charting the IFR operations trend in Exhibit 3D, we felt using the data exactly as provided by GCR would be the best course of action. We are increasing the estimate of IFR operations to up to 10% of total operations to account for unrecorded operations. 36% of operations are classified local (touch-and-go) operations that are nearly all VFR. Underestimating or overestimating the IFR operations proportion of total operations has no impact on the facility requirements in Chapter Four, although the FAA might consider IFR operations numbers when contemplating new or different instrument approaches in the future. The consequences of underestimating or overestimating total operations is described in the response to #3.19.	Yes
3.44	3-15	**Based Aircraft Forecast**-explain how various forecast models were developed and the preferred one selected.	The explanation is in the chapter and can be discussed more at the meeting Dec. 9.	-
3.45	3-22	3rd para- the **FAA's Terminal Forecast** is mentioned frequently. What is it, how is it developed and explain how it is relevant.	The Terminal Area Forecast (TAF) is the FAA's annual forecasting for terminal control centers and for the approximately 3,300 individual airports that are in the National Plan of Integrated Airport Systems (NPIAS). According to the Terminal Area Forecast Summary, Fiscal Years 2009 – 2030, p. 3, "The TAF is prepared to assist the FAA in meeting its planning, budgeting, and staffing requirements. In addition, state aviation authorities and other aviation planners use the TAF as a basis for planning airport improvements." The TAF provides a benchmark for individual master plan forecasts. The FAA may modify or update the TAF based on an approved master plan forecasts. If an airport master plan forecast for operations exceeds the TAF by more than 10% in the first five years, they are sent to FAA Headquarters for review. According to Par. 428.a, FAA Order 5100.38C, AIP Handbook, the lack of FAA acceptance of forecasts may delay any further planning or capital improvements depending on them. See Appendix H for the comparison of Aurora's master plan forecasts and the TAF. We will add this explanation to the chapter. For more information about the TAF, see http://www.faa.gov/data_research/aviation/taf_reports/media/TAF%20Summary%20Report%20FY%202009%20-%202030.pdf.	Yes
3.46	3-29	last para-**"The airport has now passed the 500 operations threshold for Aircraft Approach Category C"**. How do we know? Where is it documented and by whom? **But there are not 500 operations for ARC C II.**	There are at least 500 operations for Aircraft Approach Category C and at least 500 operations for Airplane Design Group II, hence the ARC is C-II. Table 3P shows the number of Aircraft Approach Category C operations in FY 2007 and FY 2009 (665 and 377)—these include Airport Reference Code (ARC) C-I, C-II, and C-III. The average of these two years is 521. We consider this average a fair representation of activity because within the last ten years, 2007 was the peak year and 2009 was the valley year. To get these numbers, we counted individual jet operations in IFR records, adding VFR arrivals and departures as required. Here's an example of the backup for Table 3P. The table lists 293 ARC C-I operations in FY2007. These ops are: BAE 125-122, Israel 1124-15, Learjet 36-2, Learjet 45-4, Learjet 55-2, Learjet 31/31A-12, Learjet 35A-14, and Hawker 400/400A-122. A sample from the IFR data is copied below these comment responses.	No
3.47	-	All activity forecasts presented are unconstrained; that is unrealistic.	See response to #3.1.	-

3.48	3-5	The oil price prediction needs references as to source/basis. The prediction is totally unrealistic.	See response to #3.28.	-
3.49	3-10	Exhibits 3C and 3D indicate that of an estimated 88,000 operations at Aurora in 2008, only some 5,800, or 7% were IFR. That seems unrealistic.	See response to #3.10.	-
3.50	3-29	How do we know "the airport has now passed the 500 operations threshold for Aircraft Approach Category C, so the current ARC should be C-II"? What proof? Why C II ?	See response to #3.46.	-

ADDITIONAL INFO FOR DOCUMENTATION OF ARC

Exhibit 3D on page 3-10 lists IFR operations for all types of aircraft, piston and turboprop as well as jet aircraft. Table 3P is only jet aircraft.
The jet operations in Table 3P result from reviewing IFR records line-by-line and adding additional arrivals and departures as needed.
See the footnote on p. 3-29. Here is an example of an IFR record:

Aircraft - **N600ST** Make and Model **CESSNA 550** Class **JET**
ROBERTS FIELD to AURORA STATE - 02/13/2007 at 08:01 AM
REDDING MUNI to **AURORA STATE** - 02/13/2007 at 03:55 PM
ROBERTS FIELD to **AURORA STATE** - 03/07/2007 at 07:44 AM
AURORA STATE to **ROBERTS FIELD** - 03/07/2007 at 08:19 AM
ROBERTS FIELD to **AURORA STATE** - 03/07/2007 at 02:45 PM
AURORA STATE to **ROBERTS FIELD** - 03/07/2007 at 03:12 PM
ROBERTS FIELD to **AURORA STATE** - 06/11/2007 at 09:25 AM
AURORA STATE to **REDDING MUNI** - 06/11/2007 at 10:28 AM
SACRAMENTO MATHER to **AURORA STATE** - 06/11/2007 at 06:59 PM
BOEING FIELD/KING COUNTY INTL to **AURORA STATE** - 07/18/2007 at 12:19 PM
AURORA STATE to **ROBERTS FIELD** - 07/18/2007 at 04:18 PM
Total Operations 11

Operations need to be added to get the airplane from Aurora to Redding Muni on 2/13, from Aurora to Roberts Field between 2/13 and 3/7, and from Aurora to Boeing Field between 6/11 and 7/18.

Nick Kaiser (submitted March 24, 2011)

3.51	3-22	1.36% growth in based aircraft will be dependent on what facilities are available at Aurora vs. other airports. What data other than population and Employment shows that Aurora will get this kind of growth?	It is an unconstrained forecast that assumes capacity will be built to meet demand. Chapter Three discusses historical growth at the airport, national and state aviation trends, other forecasts for the airport, and anecdotal projections by some businesses at the Airport.	No
3.52	3-24	According to the FAA guidelines having 240 OPBA indicates little itinerant traffic but according to the Aurora airport operations chart over half of the operations are itinerant?	The FAA uses two different meanings for the word "itinerant". Itinerant operations are those travelling more than 20 miles to/from the airport, and are performed by aircraft based at the airport and by aircraft based at other airports. Operations that are not "itinerant" are "local". Local operations are mostly touch-and-go and other training operations that stay within 20 miles of the airport. Local operations are also performed by both based and visiting aircraft. By saying that 250 OPBA is typical at a rural GA airport with little itinerant traffic, the FAA means little activity by aircraft based at another airport. Aurora State Airport's activity is not consistent with this guidance regarding OPBA, as discussed on pages 3-24 and 3-25 of Chapter Three.	No

Aurora State Airport Master Plan Update - Comments Received on Draft Chapter Four

Comment #	Page #	Comments received from: Tony Holt, Nick Kaiser, Bruce Bennett, Roger Kaye, and City of Aurora	WHPacific Response	Will revisions to Chapter 4 be made based on comment?
		Tony Holt		
4.1	General	Repeating a question I asked at the last meeting, to ensure a response: Current runway length is 5004ft. What is the current length of the required 'safety zones' (sz) at the north end and the south end? What is the distance from the ends of the current safety zones to the airport fence (F) at the north end and the south end? For example, what are the following distances: F---------I---sz----I---------- runway----------I----sz----I----------F	Safety zones are referred to as Runway Protection Zones (RPZs) per FAA Advisory Circular 150/15300-13. Table 4C (page 4-8) shows the RPZ dimensions for the existing condition (ARC B-II with approach minima greater than 1 statute mile), as well as for ARC C-II (all approach minimums). The dimensions you requested are shown below, along with the Runway Safety Area (RSA) lengths (Runway 17 end is to the north, and Runway 35 end is to the south): RPZ length beyond Runway 17: 1,200' RPZ length beyond Runway 35: 1,200' Runway 17 RPZ end to fence: 847' Runway 35 RPZ end to fence: -154 (RPZ extends south of Keil Rd) RSA length beyond Runway 17: 300' RSA length beyond Runway 35: 300' Runway 17 RSA end to fence: 1,747 Runway 35 RSA end to fence: 746'	No. Chapter 5 addresses these issues.
4.2	General	If the runway was lengthened as much as possible without expanding outside the current airport fence, what would be the new runway length and how long would the new 'safety zones' be?	Draft Chapter 5 shows an alternative that extends the runway, while keeping within the current Airport footprint. The appropriate RPZs and RSAs are shown in each alternative.	No. Chapter 5 addresses these issues.
4.3	General	Chapter 5 of the FAA Advisory Circular on Airport Master Plans talks about 'Environmental Considerations' and spends considerable time talking about noise pollution. It mentions noise levels as one of the three most common environmental concerns, talks about a noise compatibility planning program and noise overlay zones. When will this master planning exercise talk about noise? Hopefully it will be before a choice of "possible development alternatives" is made since that must surely be a factor in basing a decision.	Per the Scope of Work, noise contours are developed for Draft Chapter 5. Within Chapter 5 each alternative, including the no build alternative, will be shown with the noise contours. The FAA's Integrated Noise Modeling (INM) program is used to develop the contours. Additionally, an environmental overview for each alternative is given in Draft Chapter 5, wherein noise is an important component for analysis. The noise contours and subsequent analysis will assist decision-making for the "Preferred Alternative."	No. Chapter 5 addresses these issues.
4.4	General	Regarding the survey, it is interesting that of the 61 respondents only 10, or 16%, would publicly say that they have constrained operations. It is interesting also that these 10 operators are content to use KUAO, rather than move to Hillsboro or elsewhere, even though they claim to be constrained. It is also interesting that one operator claims to be about to purchase a new Citation X even though he knows that aircraft may be constrained. It makes one wonder why considerable taxpayer money may be expended to make these already happy operators even happier.	Two surveys were distributed for this planning project: Airport User Survey and Runway Length Survey. The responses you reference are from the Airport User Survey. This survey was distributed at FBOs on Airport and at nearby airports, and on the project website. Many of the respondents were operators of single engine, piston-driven aircraft that have vastly different needs than business jet users. The Runway Length Survey (Appendix I) was distributed to a targeted group identified by IFR flight records that would likely be constrained due to runway length. The runway length analysis identified 358 constrained annual operations based on those survey returns (this number will likely change, as more surveys continue to be returned), see page 4-13. Many factors are used by operators to determine where they base their aircraft - or operate in and out of - in addition to runway length (*i.e.* , location, hangar availability, etc.).	No

4.5	4-2	1st paragraph, talks again about the ARC being C-II. This claim is based on arbitrarily picking two years (2007 and 2009) and averaging them with the defense that one is the decade's highest activity year and 2009 is apparently the decade's lowest year. That is not a robust enough analysis to justify big changes in airport facilities at KUAO. And while we're on that topic, the fact that one operator talks about buying a Citation X surely cannot justify announcing it as the new, official, 'critical aircraft'.	The averaging of two years was a reasonable way to account for the extraordinary impact of the recession. We did not examine more than two years because tallying this information is very labor intensive. There are airports that upgrade their ARC based on forecasts only, without having already surpassed the 500 operations threshold as Aurora has. The ARC represents a family of aircraft and the representative aircraft chosen as the critical aircraft is the one in that ARC that uses Aurora the most. Since the forecast chapter was prepared, an Astra aircraft (ARC C-II) has based at Aurora. (The Astra was listed as the current critical aircraft in the forecast chapter, due to operations by transient aircraft.) Astras were introduced in the mid-1980s. The Citation X is a newer business jet model in ARC C-II and so is likely to remain in the business jet fleet longer than the Astra. If the Aurora tenant purchases a Citation X, the number of Citation X operations will increase considerably in the future from the number occurring now. The Citation X is neither the heaviest airplane using the airport nor the one needing the longest runway, as shown in Table 4E. Consequently, there is no need to fear that future airport design will be focused on that one aircraft. ODA has not yet decided to upgrade the airport from ARC B-II to ARC C-II and will not before considering the development alternatives that show both ARCs.	No
4.6	4-5	The table at the bottom of the page, I presume the hourly capacities mentioned for VFR and IFR are either /or, not additive? It is interesting that one respondent to your questionnaire says "---we have only a single runway which under normal economic conditions is close to the maximum traffic possible now."	Yes, the capacities are not additive, because weather is either visual or instrument. One user may feel the runway is close to maximum traffic, but examples of busier airports with one runway include McClellan-Palomar (Carlsbad, CA) with over 170,000 annual ops and Scottsdale with over 190,000 annual ops.	No
4.7	4-14	Runway Pavement Strength---currently 45,000lbs for dual wheel and taxiway currently 60,000lbs, so if mtow of ARC CII aircraft is more than 45,000lbs and they are using the runway, why is "the current strength rating adequate for the current runway length and using aircraft"?	As shown in Table 4E, not all ARC C-II aircraft have a maximum takeoff weight (MTOW) greater than 45,000 lbs (seven aircraft are shown to have MTOW's greater than 45,000 lbs, regardless of ARC). While this list is not all inclusive of business jets, it is representative of the common business jet fleet, which shows MTOWs can vary greatly. Rarely do aircraft operate at MTOW, due to constraints such as runway length or high ambient temperatures, nor do operators fill the fuel tanks completely if the flight does not require it for safe operations. As such, it is our analysis that because of constraints, such as runway length limitations, few operators will be able to take off with weights greater than 45,000 lbs. ODA, in some instances, has issued waivers for heavier aircraft to operate at the Airport. If the runway were extended, however, operators would be less constrained and more likely to put on more fuel, for instance, thus increasing the aircraft's weight and the need for the pavement strength to be increased. Even with increased pavement strength, operators are not likely to operate at MTOW.	Yes, clarification will be added as to why the current strength rating is adequate for the existing runway length and aircraft fleet.

4.8	4-17	1st bullet, if FAA approves this additional departure procedure will it (and a 90-degree left turn) become mandatory, even without a tower?	Departure procedures, unless flying under instrument flight rules (IFR), are not mandatory for aircraft operators. An air traffic control tower (ATCT) would be able to direct both IFR and visual flight rules (VFR) traffic on the departure procedures. The purpose of an ATCT is to provide aircraft separation and sequencing. Without an ATCT it is solely the pilot's discretion on how to operate safely.	Yes, clarification will be given.
4.9	4-17	3rd bullet, please explain “allow a back course approach”.	Runway 17 has a localizer approach. A "back course" approach would utilize the Runway 17 localizer to give approach guidance for Runway 35. See the drawing below. The hatched chevrons show the localizer, while the solid chevron represents the back course approach. Tracking the back course approach inbound gives reverse sensing unless the aircraft has an HSI (horizontal situation indicator) installed; meaning if the indicator shows course deflection to the left, the pilot would actually correct to the right to get back on the localizer course. For this to work at Aurora State, the distance measuring equipment (DME) associated with the localizer would require an upgrade. Utilizing a back course approach to Runway 35 would reduce the conflict of flight students practicing the Runway 17 localizer approach during calm wind conditions (Runway 35 is the preferred calm wind runway). 	Yes, clarification will be given.
		Nick Kaiser		
4.10	General	In the 2000 master plan update it was noted that the operations acoustical counts for 1997 were not totally accurate but the procedures would be improved for 1998. Were there acoustical counts taken in 1998 or beyond?	According to ODA records (http://www.aviation.state.or.us/Aviation/docs/RENSSummary94-02.pdf), four counts have occurred since the 1997 cycle. The results were: 1998-99 = 74,056 ops; 1999-2000 = 57,823 ops; 2001-02 = 58,479 ops; and 2002-03 = 62,926 ops. The RENS counts are estimates, based on seasonal acoustical samples. While procedures were improved, flaws with the RENS program are inherent (*i.e.* , aircraft noise not "triggering" the system, false-positives, etc).	No
4.11	4-7	How does the C II design standards affect land use outside the airport boundary if the RSA requirements goes from 300’ to 1000’ and the RPZ goes from 1000’ to 1700’? What can be built in the RSA and RPZ? Where do you start the measurement for the increased RSA and RPZ requirements?	If the RPZ extends off airport, the FAA recommends ODA acquire the property; however, in some cases avigation easements would be allowed. Regardless of ARC, the RPZ begins 200' beyond the runway end. While it is desirable to clear all objects from the RPZ some uses are permitted, provided they do not attract wildlife, are outside of the Runway object free area (OFA), do not allow assembly of people, do not allow bulk fuel storage, and do not interfere with navigational aids. If the RSA extends off airport, ODA would acquire the property. Table 4C shows the RSA length beyond runway end for ARCs B-II and C-II. The RSA must remain free of objects, except for objects that need to be located in the RSA because of their function (those objects higher than 3 inches above runway grade should be constructed on frangible mounted structures).	No. Chapter 5 addresses these issues.
4.12	4-10	Is there a category of mid size airplanes that could be applied to table 4D?	No. These are the categories included in FAA's design program.	No

4.13	4-18	Will wastewater land requirements be considered when the final land needs are identified for the various airport designs?	Wastewater land requirements for development needs on state-owned property will be identified in Chapter 5.	No. Chapter 5 addresses these issues.
4.14	4-26	(land use planning) The city of Aurora's comprehensive plan and vision plan have references to current and future airport opportunities and issues and should be reviewed in the master planning process. Also the City has an Urban Growth Boundary Coordination Agreement with Marion County that has a section on the Airport and surrounding lands as an Area of Mutual Concern.	These planning documents will be reviewed and included, as appropriate.	Yes. Documents cited in Chapter 2.
		Bruce Bennett		
4.15	General	Should the current weight restrictions of both based and visiting aircraft be mentioned in the length sections?	See response to 4.7.	No
4.16	General	Please be advised a 27,400 pound Hawker 800A s/n 2580055 (federal registration N855BC pending) has flown into Aurora and is based here until eventual sale, it is not now flyable but will be when registration is complete and US Airworthiness established and issued.	Noted.	No
4.17	General	I request the addition of the attachment to the master plan; this follows up on my comments at the last meeting and on my attempt to keep things in perspective. (attachment shown below)	The information will be included in an appendix of the Final Draft Master Plan Update.	No
4.18	4-11	Table 4E. JHRD does base their Citation CJ3 at UAO.	Noted, table will be corrected.	Yes
4.19	4-16	We do have precision instrument approaches (GPS 17 & 35) although with high (1 mile) visibility.	The Airport has LPV (localizer performance with vertical guidance) approaches, which are considered nonprecision.	No

Aurora Airport Relative Runway Length & Strength Comparison

Based on FAA Airport Facility Directory dated 18 NOV 2010
Compiled by Aurora Aviation December 13, 2010

Airport	MAX Strength	Runway Length
UAO- Aurora State	45K	5004
AST- Astoria	119K	5796
Baker	82K	5095
Bend		5200
Burns	90K	5100
Christmas Valley		5200
Toketee		5350
Corvallis	100K	5900
Cape Blanco	340K	5100
John Day		5220
Joseph		5200
K-Falls	230K	10301
LaGrande	130K	5600
Lakeview	109K	5306
Madras	180K	5089
McDermitt		5900
McMinnville	80K	5420
Newport	170K	5398
OTH- N. Bend	190K	5980
Ontario	50K	5011
PDT- Pendleton	210K	6301
TTD- Troutdale		5399
RDM- Redmond	200K	7038
RBG- Roseburg	88K	4602
Scappoose	90K	5100
Sunriver		5455
The Dalles		5097
Tillamook	125K	5001

		Roger Kaye (asked at the PAC #3 meeting)		
4.20	4-26	The zoning/planning discussion should be deferred to Chapter 5. If were to remain in Chapter 4, there could be conflicting data.	The recommendations given would remain, regardless of alternatives presented in Chapter Five, as they are broad and conform with State guidance given in the Oregon Aviation Plan.	No
		Nick Kaiser (submitted March 24, 2011)		
4.21	4-13	Constraints have increased from 358 to 473 and at the last PAC meeting it was said that it was now even higher. Does ODA have a way to verify these constraints?	Names, phone numbers, addresses, N numbers, and aircraft types can be verified through public records.	No
		City of Aurora		
4.22	4-24	Add text to the effect that public services/facilities should be planned in accordance with needs and capacities rather than be forced to respond to development as it occurs.	Chapter Four identifies facilities that would be required to meet the forecasted demand. Planning and the phasing of specific projects, including utilities, is more appropriate in later chapters of the Plan.	No
4.23	4-25	Under Utilities subheading, add text, "The City of Aurora has express concerns that additional groundwater wells or expansion of water facilities at the Aurora State Airport will have negative impacts upon the City's current water supply. Drinking water quality is also a concern for the City. Continued development and/or potential expansion of airport facilities without proper advanced planning and feasibility assessments regarding the airport's ability to meet water, sewer, and fire protection needs concerns the City.	Noted, text will be supplemented.	Yes
4.24	4-25	Under Utilities subheading, add text, "While it is not within the scope of the Airport Master Plan Update to collect data on surrounding properties and potential expansion of the airport boundary and whether expansion of the airport boundary would be able to provide adequate water or sanitary sewer service (septic or otherwise), the City has requested that the Master Plan Update provide additional documentation as to the adequacy of water, sewer, and other proposed utilities of existing facilities and within the existing airport boundary prior to adoption of the plan document. It is the City's position that adequate consideration of impacts to public facilities and services such as water, sanitary sewer, storm water, and traffic should be given as part of the Plan Update".	This request is outside of the Plan's Scope of Work. Issues relating to utilities will be addressed, as specific projects are identified.	No
4.25	4-5	Under Airfield Capacity: Reference should be made to the Airport Planning Rule here and the requirement that land use applicants should *show* that the proposed increased capacity and projections for flight growth/need *cannot* be reasonably accommodated in the existing airport boundary.	This section is relating to runway capacity; therefore, this addition would not be appropriate.	No

Aurora State Airport Master Plan Update - Comments Received on Draft Chapter Five

Comment #	Page #	Comments received from: Fred Netter, Dan Riches, Nick Kaiser, Tony Holt, City of Wilsonville, City of Aurora, Marion County, and Dave Waggoner	WHPacific Response	Will revisions to Chapter 5 be made based on comment?
		Fred Netter		
5.1	General	Since our role is safety and we strive to be "the safety experts", we place this as our number one concern. We support any proposals that enhance safety as well as protecting the other patrons of our district from economic hardship or undo inconvenience.	Noted.	No
5.2	General	After evaluating all of the proposals, we concluded that a fire facility consisting of two apparatus bays should be included in any plan, even the "no build". We believe this facility should be located by the airport water supply facility along Airport Rd. This location best serves ARFPD for accessibility and eliminates the problem of security. Since this facility is necessitated by airport use and business, it should be paid for by airport generated funding.	Noted, the Preferred Alternative will reserve land for a facility in the location supported by the ARFPD. Funding sources will be identified at a later time. As an Airport Rescue and Fire Fighting facility is not required at the Airport, funding from FAA or ODA is unlikely.	No
5.3	General	We would support the expansion of the runway both north and south as long it does not impinge on the use of private property, both farm and non farm, or result in increased response times or call volume for ARFPD without funding increases.	A runway extension has been shown to be infeasible at this time.	No
5.4	General	Necessary changes in area intersections and roadways must be part of any plan with a focus on safety.	Traffic impacts of proposed development will be evaluated as projects are defined.	No
		Dan Riches		
5.5	General	Columbia Helicopters supports modernization and possible extension of the … Airport runway to provide for a safer operating environment … however, it cannot support any proposal that would restrict business development of our property.	See response to #5.3.	No
		Nick Kaiser		
5.6	General	Need to correct the calm wind runway in chapter 5 pages 9 , 15 , 20.	Yes, these errors will be corrected.	Yes
5.7	5-2	ODA and FAA will establish departure procedures for both runway 35 and 17 to avoid flight over noise sensitive areas.	Runway 17 will be included in the text.	Yes
5.8	General	I still feel that the number of actual operations used, as base data in this study is too high. There should be an actual count made over the various seasons of the year to validate the number and type of operations.	See response to #3.19.	No
5.9	General	The number of operations for critical aircraft that exceeded 500 is still borderline.	See response to #3.25.	No
5.10	General	Constrained operations need to be further validated. The timing of implementing any alternative that is based on constrained operations should be looked at again after further study.	See response to #4.21.	No
5.11	General	There should be a category of airplanes that is used in the study that is medium size not just small and large. The study mix that includes medium size might show a better fit.	The aircraft called "large jets" in the noise input are actually medium-sized according to the industry (see Table 4A in Chapter Four).	No
5.12	General	The preferred alternative should not extend past the current airport boundary, including the RPZ.	Noted.	No
5.13	General	The weather is below 1 mile visibility a small % of the time so having an approach that is usable in lower visibility minimums might not be necessary.	Noted.	No

5.14	General	Calm Wind runway 35 has worked to help abate noise over populated areas and should be continued.	Agreed. See response to #5.6.	No
5.15	General	Having a control tower will help with Safety and Noise.	Noted.	No
5.16	General	In the short term no change in the airport (except for a run-up area for runway 17) is needed and should be adequate to accommodate planned business growth.	Noted.	No
5.17	General	A longer-term look could accommodate a build alternative like number 1 and still stay within the boundaries of the airport.	Noted.	No
5.18	General	All livability issues from the surrounding communities need to be considered when Airport development changes are planned and all long-term impacts are not thoroughly understood.	The planning team has tried to consider these needs, as outlined in the Goals and Issues section of the Master Plan.	No
5.19	General	How did you use the noise data from the 2002 noise study to help develop the noise contours for each alternative?	The 2002 noise data was utilized to determine the model aircraft type and the percentage of operations in a given group (i.e. turboprop, small prop, large prop, jets, and heli). The operations data from this older study was not used to determine the number of operations – just the group makeup. The same group composition (percents and aircraft) was used for each alternative, with the only change the operation numbers between existing conditions and the future conditions.	Yes
		Tony Holt		
5.20	General	Constrained Operations: Given the proviso that the FAA requires airport sponsors to document at least 500 annual itinerant aircraft operations before considering funding of a runway extension (Chapter 4, page 4-11), it is vitally important that proper and accurate documentation be provided by operators demonstrating past constrained operations. Simply sending surveys to based aircraft operators and a wide selection of non-based operators, including some aircraft brokers in California, and asking them how many constrained operations they estimate they have had (or even would have) at Aurora Airport, is insufficient and can lead to possible manipulation of the data. There needs to be a more rigorous attempt at accurate documentation from logbooks or other records. Given that more surveys were returned and mentioned at the last PAC meeting I believe this is a valid topic for Chapter 5.	See response to #4.21. The mailing list for the questionnaire was compiled from IFR records of aircraft that operated frequently at the Airport.	No
5.21	General	Predicted Noise Contours: It is notable that the maps shown as Exhibits 5E-5H have predicted (after a tower is installed and new departure rules are approved by the FAA) noise contours that stop short of Wilsonville City Limits. Clearly, the noise does not stop at the 55 dBA contour. The contours should continue northward to show what noise level is experienced over the City of Wilsonville, including that caused by landings on runway 17. The noise analysis was poorly explained at the last PAC meeting, in my view, and more time should be spent discussing the basis for the conclusions.	The FAA requires noise contours to the 65 dBA line be shown, we have shown contours to the 55 dBA line. The contours show an averaging of noise exposure and we acknowledge there may be noise events of the City of Wilsonville that exceed the average contour line.	No
		City of Wilsonville		
5.22	General	The Wilsonville City Council recognizes the Oregon Department of Aviation master planning obligations, and supports an Aurora State Airport Master Plan alternative that achieves the following outcomes:		
5.23	General	Improves management of aircraft approaching and departing Aurora State Airport that results in minimized noise and enhanced safety to the City of Wilsonville;	Noted.	No
5.24	General	Eliminates the need to expand the runway to the North in a way that impacts current facilities;	Noted.	No

5.25	General	Preserves foundation farmland by restricting future airport development to the property suitable for airport use and bounded by the Hubbard Cutoff to the West, Airport Road to the East, and Arndt Road to the North;	Noted.	No
5.26	General	Supports concurrency by recognizing surface transportation impacts on Airport Road resulting from future development and allowing for cooperation with Clackamas and Marion Counties on the scope and funding of any future improvements that may be required;	Noted.	No
5.27	General	Recognizes a preference for preserving the existing use of Keil Road.	Noted.	No
		City of Aurora		
5.28	5-2	When addressing demand, please specify whether land is public or private or a combination of both to meet hangar demand, aprons and aircraft parking, cargo apron, fuel tanks, etc. (bullets under "Landside Requirements")	As shown in the alternatives, the allocation of these items vary by alternative. Therefore, it would be inappropriate to allocate specific acreages.	No
5.29	5-3	It is my understanding that the Aurora Rural Fire Protection District has not yet identified the site for their new facilities and this was confirmed with the fire chief. While the fire district may have identified the need to park a vehicle at the airport, this distinction needs to be made. Also, please specify how much land is being dedicated/set aside for the fire district under Landside Requirements.	The acreage allocation will be added. ODA and the District acknowledge a specific site has yet to be determined. The alternative merely show areas that would be suitable.	No
5.3	5-3	3rd bullet from the top re: Airport Road. Improvements to Airport Road will occur as improvements occur and will require Traffic Impact Analysis (TIA) from Marion County. This bullet should be completely removed as it is not a statement of fact. ODA and private owners WILL BE required to work with Marion County and City of Aurora as improvements to Airport Road are REQUIRED as a result of development. Funding for improvements are based upon traffic impacts of development. I can provide suggested language from Marion County if requested.	Noted, section will be revised as appropriate.	Yes
5.31	5-3	2nd to last paragraph, please clarify whether the needs for 40 developable acres to meet demand includes: ODA land, private land, or a combination or both. This is clarified later in the text (pages 5-4) but it should be made clear from the beginning. Also include information regarding whether the 40 acres includes needs for water and sewer to accommodate this growth (i.e. Septic fields)	This paragraph states ODA only has nine developable acres, implying development will be a combination of private and public lands. The 40 acres includes allowances of 3 to 4 times the building floor or individual vehicle/aircraft parking area, to account for circulation, fire separation, inefficiency in layout, etc. Depending on how many facilities have plumbing, the land allowance may not be enough for septic fields.	Yes
5.32	5-3	2nd to last paragraph- Again, the Aurora Fire District has not identified a site for their new facility. Please remove reference to the Fire District facility.	See response to #5.29.	No
5.33	5-4	Includes the following statement, "Combining 9 acres of undeveloped State-owned property and 26 acres of undeveloped private property currently zoned for airport use this is a shortfall of approx. 5 acres… over the next 20 years…adjacent property is shown to be suitable for airport-related development. This area incorporates approximately 16 acres. This land, now used as a church camp…" Please explain how the adjacent lands cannot meet the need for 5 additional acres over the next 20 years.	We project a need for 40 acres of landside development over the next 20 years and 35 acres are available for development on either state-owned land or privately owned land that is zoned appropriately for airport use. To provide for the 5-acre shortfall, the church camp is the most suitable for converting to airport development, given its location. The explanation of our 40-acre projection begins on p. 4-18 of Chapter Four.	
5.34	5-4	"Development of private property, adjacent to the Airport, would be permitted-consistent with local and State regulations". This sentence does not provide an appropriate explanation of the land use constraints associated with rezoning EFU land to Public including application to Marion County for Oregon Planning Goal 3 exception. Language from Marion County should be requested and submitted here.	This statement is referring to the adjacent private property on-airport currently zoned as Public, which would be consistent with zoning. Clarification will be given that the No Build Alternative is only a no build for the state, private property (*i.e.* , Southend Airpark, Columbia Helicopter, etc) could still be developed. For the church camp property, a statement will be included to detail the Planning Goal exception.	Yes

5.35	5-5	"The runway extension would accommodate… Keil Road would be dead-ended". Please specify whether this Alternative would result in the loss of road access/frontage for any property owners along Keil Road.	Information will be added to text.	Yes
5.36	5-9	Alternative 2 Noise Contours should acknowledge that by moving closer to the City of Aurora and its surrounding communities would result in a significantly higher impact as the number of residential impacts is much higher than any other alternative since the City of Aurora is primarily residential in nature in the NW end of the city limits and UGB.	Text will include a statement that the 65 dBA contour line would incorporate more residential properties than the other build alternatives.	Yes
5.37	5-15	1st paragraph: Remove reference to the No Build Alternative not presenting noise concerns. The document has acknowledged that the No Build Alternative would still result in growth at the Airport, simply within the current land use boundary. As such, growth at the Airport will continue to have noise concerns/impacts of growth upon surrounding communities.	This statement relates to FAA thresholds of noise impact. A statement will be added that surrounding communities are concerned of the increased noise expected at the airport due to the increase in operations.	Yes
5.38	5-16	Please provide clarification on why avigation easements will be sought on residential lands but agricultural use lands will require acquisition. All lands south of the airport are EFU, some of which include residential uses along with their EFU zone. If the ODA is to pursue acquisition of some lands and only avigation easements over others, this needs to be explained in more detail. In addition, the document later references (on page 5-17) that the FAA may allow continuation of agricultural practices in the RPZ based upon the commodity produced. Whether or not property owners with EFU lands can pursue avigation easements rather than acquisition needs to be explained.	Please refer to the Preferred Alternative and the proposed plan for acquisition/easement within the RPZ.	No
		Marion County - Patti Milne		
5.39	General	An air traffic control tower at the airport can improve safety and reduce the impact of air traffic over residential properties in the area.	Noted.	No
5.40	General	A fire facility at the airport is necessary…	Noted.	No
5.41	General	Based on information provided throught the planning process, we favor an extension of the length of the runway and an increase in it's weight-dearing capacity to support safe and economically efficient airport operations.	Noted.	No
5.42	General	Marion County would support instrument upgrades that improve safety through improved technology.	Noted.	No
5.43	General	Marion County supports ODA's efforts to design departure procedures and designate a calm-wind runway…	Noted.	No
5.44	General	Marion County recognizes that Aurora State Airport is different from many airports in the state… Marion County encourages ODA as well as property owners in the Public Zone at the airport to continue working collaboratively with Marion County on landside development, zoning issues, and traffic impacts in the area outside the airport property.	Noted.	No
		Dave Waggoner		
5.45	General	Modify Build Alternative 1 (600' runway extension to the north) by adding a 400' Displaced Threshold.	Displaced thresholds and the use of "declared distances" (different runway lengths for different components of takeoff/landing) are not recommended at this Airport and they are not supported by the FAA for Aurora. Declared distances must be approved by the FAA. The FAA would rather invest in pavement that can be used for both landing and taking off, otherwise they are only getting half of the utility from their investment.	No

Aurora State Airport Master Plan Update - Comments Received at the Planning Advisory Committee (PAC) #4 Meeting

Comments received from PAC Members and the Audience that warrant further response/clarification	WHPacific Response
If the runway object free area (ROFA) extends, what will happen to the highway?	The highway would not be relocated. ODA would request the FAA to approve modifying the ROFA standard to allow the highway to remain. Recent conversations with the FAA indicate the request would likely be approved.
Have you considered what this project will do to the town of Aurora? Who needs this extension?	Yes, surrounding communities have been considered, including Aurora. The City of Aurora also has a seat on the PAC. As for the extension question, please refer to Appendix I.
Currently the flight plan/pattern is not followed, especially at night. Planes fly right over houses and shake the windows. Concerned about the future safety and who disciplines pilots who fly in no flight zones.	The flight pattern and noise abatement procedures are recommended, not required in most situations. The air traffic control tower will allow for better oversight of operations and sequencing of traffic.
Can we use the additional capacity at Salem Airport rather than expand Aurora?	While there may be unused capacity at Salem, users prefer to operate at Aurora.
What does it take to become a C-II Airport?	For the most part, the Airport already meets C-II design standards. Notable changes would be the increased runway object free area (ROFA) width and increased runway protection zone (RPZ) size.
Can alternative 1 become a C-II with all other elements remaining the same?	Yes, however, the ROFA, RPZ, and runway safety area (RSA) would have to increase in size.
Since we are already a volunteer fire station in Aurora, who will pay for a new fire facility?	We do not know. ODA could not obtain a grant from the FAA to pay for such a facility, since the Airport does not have airline service (therefore a fire facility is not required). Consequently, ODA would not be able to fund construction of the facility. ODA could lease land for the facility, however.
Can you request a modification to standards of the ROFA (on Highway 551) from the FAA?	Yes, see first response above.
Why do you need more clearance for a more precise approach?	A more precise approach allows landing in lower visibility conditions. Larger safety clearances increase the margin of safety - they account for the fact a pilot cannot see as far as in clear weather.
Has ODOT gotten onboard with road improvements, especially Keil Road?	ODOT has reviewed the alternatives, and has expressed concern over the possiblity of closing Keil Road.
If the current noise/flight pattern policy isn't being followed, why would a different policy be followed?	Efforts to educate pilots would continue and the air traffic control tower could provide oversight of operations.

Where is the money/funding for the project coming from?	No specific projects have been defined yet. For those projects eligible for FAA funding, the FAA could fund up to 95% of the project costs. The remaining responsibility would fall on the state or private developers (depending on the project).
Will there be any consideration for jet fumes in any of the future alternatives?	We see no appreciable difference in the alternatives regarding jet fumes. An environmental assessment for a runway improvement would look at air quality in more detail.
Who enforces the noise abatement procedures?	There is no enforcement; they are recommendations.
Will future zoning be amended due to the expanded noise footprint?	We do not know. The FAA and airport owners encourage local governments to make zoning around airports consistent with the FAA's aircraft noise/land use compatibility guidance. According to FAA guidance, any land use is normally compatible outside the 65 DNL noise contour. Guidance for land use compatibility inside the 65 DNL contour is in FAA Advisory Circular 150/5020-1, Noise Control and Compatibility Planning for Airports, Appendix 1.
What will be done to mitigate noise from maintenance on jet engines?	No mitigation is proposed at this time.

Appendix I:
RUNWAY LENGTH SURVEY

Airport Master Plan Update

Aurora State Airport

Oregon
Theodore R. Kulongoski, Governor

OREGON DEPARTMENT OF AVIATION

3040 25th Street SE ♦ Salem, OR 97302-1125
Phone: (503) 378-4880 ♦ Toll Free: (800) 874-0102
Fax : (503) 373-1688

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number:
   PC-12NG N811DD
   LR-45 N75XP
2. What is the typical stage length for each of the aircraft listed above?
   PC-12 - 800 nm
   LR-45 - 1600 nm
3. What is the maximum stage length for each of the aircraft listed above?
   PC-12 1200 nm
   LR45 - 2100 nm
4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints:
   runway not long enough on hot days
   traffic congestion - safety issues
5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft): 30-40
6. Does your insurance company require a minimum runway length for operations? ___ Yes X No
   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.
7. Do you currently operate at the Aurora State Airport? X Yes ___ No
   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   ___ Yes ___ No
8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
   Control tower

Optional - Please provide your contact information, in the event we have follow-up questions for you:
Name: Bill Grabewich Company: Premier - Air
Phone: 503 880 3254 E-Mail: premier-air@comcast.net

Oregon

OREGON DEPARTMENT OF AVIATION

3040 25th Street SE • Salem, OR 97302-1125
Phone: (503) 378-4880 • Toll Free: (800) 874-0102
Fax: (503) 373-1688

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number:
   CE-560 XL N567MC , PC-12/47E N52MW
   C-172 N943SP

2. What is the typical stage length for each of the aircraft listed above? NM = Nautical Miles SM = Statute Miles
   CE560 XL - 1800 NM (2071 SM)
   PC-12 800 NM (920 SM)

3. What is the maximum stage length for each of the aircraft listed above?
   CE 560 XL 1900 NM
   PC-12 1500 NM

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints:
   During the summer on Hot days we are limited to less than a full gross weight take off because of too short of a runway. Also, Winter months cause us to operate out of Portland, OR because of runway too short.

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
   40 operations combined

6. Does your insurance company require a minimum runway length for operations? ____ Yes X No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? X Yes ____ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   ____ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
   #1, install a control tower, #2 lengthen runway to 6500 ft. #3, install an ILS precision approach.

   Please don't hesitate to contact me with any questions.

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number:
   CJ3 N149WW

2. What is the typical stage length for each of the aircraft listed above?
   400 NM

3. What is the maximum stage length for each of the aircraft listed above?
   1,800 NM

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints:
   During hot summer days we have to take less fuel and at times incurre a fuel stop.

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft): 7

6. Does your insurance company require a minimum runway length for operations? ____ Yes X No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? X Yes ____ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   ____ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
   My company is considering buying a larger aircraft that would benefit significantly from having a longer runway

Optional - Please provide your contact information, in the event we have follow-up questions for you:

Name: Manny Martinez
Company: JHRD Investments

Fax: (503) 373-1688

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number:
   Cessna Citation CE-650 N896RJ

2. What is the typical stage length for each of the aircraft listed above?
   900 + miles

3. What is the maximum stage length for each of the aircraft listed above?
   1500 N.M. if conditions are perfect at Aurora. In summer we cannot takeoff full fuel & Pax.

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints:
   We are currently limited on take off weight due to runway length. This is especially critical in summer.

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
   30 +

6. Does your insurance company require a minimum runway length for operations? ____ Yes __X__ No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? __X__ Yes ____ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   ____ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
   Our current aircraft is limited due to current runway length. We are changing aircraft to a larger model. The new model will be restricted more than the current aircraft. We would be able to operate safely with full fuel at a 7000' runway.

Optional - Please provide your contact information, in the event we have follow-up questions for you:

Follow Up Flag: Follow up
Flag Status: Flagged

Hi Sarah,

We are looking at a Citation X. We need to go non-stop to the east coast and Bahamas.
We are currently restricted with our current aircraft due to runway length requirements being to short for fuel loads required for the long trips.
When we get the Citation X, we will be more restricted. This of course means wasted time for fuel stops and extra costs involved.
During the summer months we cannot take off from Aurora without making a fuel stop for any trip over two hours.
We conduct on average 12-15 operations per month. Figure about 150-175 operation as a minimum per year.
I hope this information helps. If you need anything else from me, just let me know.
Thank-you,
Tod Coombs

Subject: Aurora State Airport

Mr. Coombs,

I am writing this email as a follow-up to a survey you completed for the Aurora State Airport Master Plan Update last winter regarding runway length. Due to financial constraints the project was put on hold, but now we are proceeding once again.

In the survey response you mention that you are currently constrained in your operations at UAO, but that constrained operations would be increasing as the company intends to purchase a more demanding aircraft. What type of aircraft is it that you are looking to purchase? What is your estimate for future constraints with this new aircraft? Also, you mention that current constrained operations are 30+: how many total operations per year do you conduct at UAO?

If you could assist me with these follow-up questions I would be greatly appreciative.

If you have any questions, please do not hesitate to contact me.

Oregon
Theodore R. Kulongoski, Governor

OREGON DEPARTMENT OF AVIATION

3040 25th Street SE ♦ Salem, OR 97302-1125

Fax : (503) 373-1688

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number: ASTRA JET | N41AL

2. What is the typical stage length for each of the aircraft listed above? 6000 feet of Runway, TRIPS OF 500-2000 N.M.

3. What is the maximum stage length for each of the aircraft listed above? 2500 N.M.

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints: ON OCCASION I would need to take more fuel to Be able to Fly nonstop, however, the Runway is too short for Full Fuel & payload.

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft): 50 Take OFFS & Landings

6. Does your insurance company require a minimum runway length for operations? ____ Yes X No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? X Yes ____ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   X Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport? LONGER RUNWAY By at least 1000 feet. 1500 feet would Be ideal.

   With increasing traffic a control tower would be a great addition!

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number: Global Express (N724AF), Gulfstream V (N531AF) and Twin Otter (N711AF)

2. What is the typical stage length for each of the aircraft listed above? Global Express – 4500NM, GV – 4500NM and Twin Otter – 100NM

3. What is the maximum stage length for each of the aircraft listed above? Global Express -- 6200NM, GV – 6500NM and Twin Otter – 300NM

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints: In the two larger aircraft, we are constrained by maximum takeoff weight and could also be constrained by runway length if a higher weight were allowed

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
   4-5 Operations

6. Does your insurance company require a minimum runway length for operations? ____ Yes _X_ No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? __X__ Yes ____ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   ____ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?

Optional - Please provide your contact information, in the event we have follow-up questions for you:

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number: ___CL-604, CL-601, G200

2. What is the typical stage length for each of the aircraft listed above? __2 to 4 hours_____

3. What is the maximum stage length for each of the aircraft listed above? _____6 – 8 hours_____

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints: __reduced passenger load due to runway length, possible diversion upon arrival if rain due to runway lenght_____

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
___once a month_____

6. Does your insurance company require a minimum runway length for operations? ____ Yes _X___ No

    a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? _X___ Yes ____ No

    a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
    ____ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
___Our policy manual and me the director of operations make restrictions that apply to this shorter type runway. It also is very hard to plan for our executives since we never know if we can land in UAO since the possibility of rain is high in Oregon. If we arrive into that area and the runway is wet we would have to divert to PDX costing our passenegr a major delay and possible missing the meetings they are flying out there for. One event like that and my orders will be never to fly into there again. I know it sounds odd, but if I plan the drive from PDX then the passneger will not miss the meeting. Don't forget, the type passneger that is on this airplane "IS" the reason for the meeting and many people are awaiting her arrival.__DON'T FORGET THE MAIN REASON YOU SHOULD DO THIS IS FOR INCREASED SAFETY MARGIN FOR ALL!

Oregon
Theodore R. Kulongoski, Governor

RECEIVED

Fax : (503) 373-1688

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number:
   Our company currently does not operate from KUAO.
   We do however occassionly operate from KHIO, KADX and KMFR
   GLOBAL EXPRESS, N881WT and GULFSTREAM 550, N885WT
2. What is the typical stage length for each of the aircraft listed above?
   4500 NM
3. What is the maximum stage length for each of the aircraft listed above?
   N881WT 5700 NM
   N885WT 6100 NM
4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints:
   Fuel limited by maximum Takeoff weight allowable at KUAO
5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
   We currently do not operate from KUAO due to location and runway length.
6. Does your insurance company require a minimum runway length for operations? ____ Yes X No
   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.
7. Do you currently operate at the Aurora State Airport? ____ Yes X No
   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   ____ Yes ____ No Not yet considered. Would have to evaluate.
8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
   Our flight department has never operated from Aurora State Arpt.
   If the runway extension were to equal or exceed the KHIO runway 12/30
   facility, we would possibly consider operations from KUAO
   occassionally.

3040 25th Street SE ◆ Salem, OR 97302-1125
Phone: (503) 378-4880 ◆ Toll Free: (800) 874-0102
Fax : (503) 373-1688

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number:
   PC-12/47E N812GS
   PC-12/47E N812FS

2. What is the typical stage length for each of the aircraft listed above?
   Typical flight length is 800 miles.

3. What is the maximum stage length for each of the aircraft listed above?
   Maximum length is 1500 miles

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints:
   No constraints.

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
   0

6. Does your insurance company require a minimum runway length for operations? ____ Yes X No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? X Yes ____ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   X Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
   In the vicinity of Hangar K we need a wider taxi way. Recent hangar construction has caused a chock point and no place to stage aircraft.

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number: ____C-152 N64942, C-172(s) N172JV & N2457X, PA-28R N425JV, C-421(s) N513SJ, N2668A & N700MR, BE-200B N411KC_____

2. What is the typical stage length for each of the aircraft listed above? ___40 NM, 60 NM, 110 NM, 200 NM, and 250 NM_____

3. What is the maximum stage length for each of the aircraft listed above? ____240 NM, 450 NM, 600 NM, 950 NM and 1200 NM_____

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints: ____Yes, but not currently (see below)_____

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
_____Approx. 500 (See below)_____

6. Does your insurance company require a minimum runway length for operations? __X__ Yes ____ No

    a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement. Our Policy is voluminous but requires a balanced field length.

7. Do you currently operate at the Aurora State Airport? __X__ Yes ____ No

    a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed? __X__ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
___We have operated off here since 1968 including Commercial Air-Carrier ("on call –charter under FAR 135) since 1980, from 2003 to 2007 this included Jet Charter (RA-390, BE-400, HS-125 & DA-900) which was constantly limited by runway length, resumption of this service would be expedited by an improved runway. Our jet fuel sales are currently limited by runway length and strength.___

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number: We do not presently operate our Global Express into Aurora State Airport since it only has 5,000 foot runway. N823DF

2. What is the typical stage length for each of the aircraft listed above? 4,500 NM

3. What is the maximum stage length for each of the aircraft listed above? 5,900 NM

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints: With the runway at its present length. We would not be able to depart Aurora State Airport with enough fuel to reach any destination in Europe or Asia. The minimum length would we would need would be 6,000 feet.

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
50

6. Does your insurance company require a minimum runway length for operations? ____ Yes __X__ No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? ____ Yes __X__ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   __X__ Yes ____ No

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number:
ASTRA #034 N541RL TRANSCONTINENT JET, LLC.

2. What is the typical stage length for each of the aircraft listed above?
1000 - 2000

3. What is the maximum stage length for each of the aircraft listed above?
2400

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints:
RUNWAY LENGTH DUE TO TEMP.

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
60-70 (SINGLE AIRCRAFT)

6. Does your insurance company require a minimum runway length for operations? ____ Yes ✓ No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? ✓ Yes ____ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   ✓ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
(1) CONTROL TOWER ASAP –
(2) RUNWAY EXTENSION –

Optional – Please provide your contact information, in the event we have follow-up questions for you.

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number:
Currently N/A due to runway length. We operate two Challengers - N601RC and 605RC as well as one Hawker 800XP - N800RC

2. What is the typical stage length for each of the aircraft listed above?
6000 NM each

3. What is the maximum stage length for each of the aircraft listed above?
N601RC - 3000 NM, N605RC - 4000 NM,
N800RC 2700 NM

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints:
Reduced max T.O. weight resulting in additional fuel stop to return to destination (Essex). Unable to use when runway contaminated

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
If runway extended - would use 12-15 Times/year

6. Does your insurance company require a minimum runway length for operations? ____ Yes X No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? ____ Yes X No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   X Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?

Optional - Please provide your contact information, in the event we have follow-up questions for you:

2. What is the typical stage length for each of the aircraft listed above?
   2-5 hrs 500 nm

3. What is the maximum stage length for each of the aircraft listed above?
   4-5 hrs 1000 nm

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints:
   TEMP's ABOVE 20°C / WET

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
   15

6. Does your insurance company require a minimum runway length for operations? X Yes X No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? X Yes ____ No

N/A a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   ____ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
   ILS
   EXTENDENDED RNWY 500' - 1000'
   TOWER

Optional - Please provide your contact information, in the event we have follow-up questions for you.

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number:
   N6780Q Beech A36

2. What is the typical stage length for each of the aircraft listed above?
   200 nm

3. What is the maximum stage length for each of the aircraft listed above?
   1000 nm

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints:

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):

6. Does your insurance company require a minimum runway length for operations? ____ Yes X No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? X Yes ____ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   ____ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
   Need a Control Tower; Several Near misses when entering or departing.

Optional - Please provide your contact information, in the event we have follow-up questions for you.

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number: CJ3 – N417C

2. What is the typical stage length for each of the aircraft listed above? ___400 nm

3. What is the maximum stage length for each of the aircraft listed above? 1700 nm

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints: Shortened runway would affect balanced field length, which would affect range and payload. Not good for us.

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft): For us, 2

6. Does your insurance company require a minimum runway length for operations? _____ Yes _X___ No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement.

7. Do you currently operate at the Aurora State Airport? __X__ Yes _____ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed? __X__ Yes _____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport? Not at this time

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number: ___British Aerospace BAE 125 Series (Hawker) 800A N855BC_____

2. What is the typical stage length for each of the aircraft listed above? ___900 NM,_____

3. What is the maximum stage length for each of the aircraft listed above? __2000 NM, _____

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints: ___ reduced payload (fuel, baggage or passengers) for takeoff due to runway length and balanced field safety requirements_____

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft):
   _____60/year_____

6. Does your insurance company require a minimum runway length for operations?*__X__ Yes ____ No
   *Not certain distance but does require legal operations which includes balance field lengths.
   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement. (on request)

7. Do you currently operate at the Aurora State Airport? __X__ Yes ____ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   __X__ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
   _____A Control Tower is very badly needed and the transient parking/ramp area on the state ramp (adjacent A2) needs work i.e. paving / seal-coating and better lighting_____

Aurora State Airport Runway Length Questionnaire

1. Please list the aircraft currently operated by your company into the Aurora State Airport, along with the aircraft's tail number: None because the runway is too short. We operate a Citation Encore. Jet N550PF

2. What is the typical stage length for each of the aircraft listed above? Hour and 30 min.

3. What is the maximum stage length for each of the aircraft listed above? Six hours

4. If aircraft operations at the Aurora State Airport are constrained (i.e., reduced payload for takeoff), identify those constraints. The runway is to short to even consider

5. Identify the number of annual operations at the Aurora State Airport that require a runway extension (this can be a cumulative number based on constrained operations of multiple aircraft, if you have a fleet of various aircraft): We would consider using it 10 times a year

6. Does your insurance company require a minimum runway length for operations? ____ Yes __X__ No

   a. If you responded Yes to #6, please provide a letter from your insurance company stating the minimum runway length requirement

7. Do you currently operate at the Aurora State Airport? ____ Yes __X__ No

   a. If you responded No to #7, can you assure that your company intends on operating at the Aurora State Airport, if a runway extension that meets your criteria is constructed?
   __X__ Yes ____ No

8. Are there any other comments/suggestions you have for improving the Aurora State Airport?
   Just make the runway longer

Optional - Please provide your contact information, in the event we have follow-up questions for you.

To: Anderson, Rainse; CUMMINGS Christopher * ODA; WILSON John P * ODA
Subject: RE: Aurora airport counts [auto-ip][senderbase]

All; I applied factors to the counts to estimate a annual average daily traffic (AADT) at the sites. These should be taken with a great plus or minus. The AADT is derived by multiplying the count ADT by a seasonal factor by an axle factor. The count ADT is just the average from the seven days it was counted. The seasonal factor is just an adjustment based on our nearby Hubbard automatic traffic recorder (ATR) that is a ratio of that count week to the year (in this case a rolling year from Nov 2009 to Oct 2010, because 2010 is not yet complete. That factor was 0.97. The axle factor adjusts for the fact that the counter just sees every two axles as a vehicle. Since there were few trailers that we saw, I just applied an axle factor of 0.99. Since all that is such a long shot, I also rounded as much as I could get away with. The chart below presents the sites in clockwise order around the airport. If you have any questions, please let me know. Don

Site ID	Description	Count ADT	Estimated Annual ADT	Peak Hour
21127	Columbia North Exit	106	100	37
21165	Columbia North Entrance	142	140	50
21157	Columbia East Entrance	926	890	396

Subject: RE: Aurora airport counts

Don,

Thanks for the data. Could you let me know what other reports you can provide....also I assume that these number are total axle counts so at a minimum they are one half of the total correct?

Thanks

Rainse

Rural Road Functional Classification Characteristics

Principal Arterial
- Continuous segments with trip length and travel density indicative of statewide or interstate travel; and
- Serve all of the large urban areas and most of the moderate sized cities.

Arterial
- Link cities, larger towns, and other major traffic generators; and provide interstate and inter-county service: and
- Spaced such that all developed areas of the region are within reasonable distance of an arterial; and
- Serve a higher travel density, trip length, and overall travel speed than collector and local systems.

Major Collector
- Provide service to larger towns not directly served by higher classed roads and to other traffic generators of equivalent intra-county importance (including parks, tourist attractions, significant resource areas, etc.); and
- Link these places with nearby towns and cities, or routes of higher classification; and
- Serve the more important intra-county travel corridors.

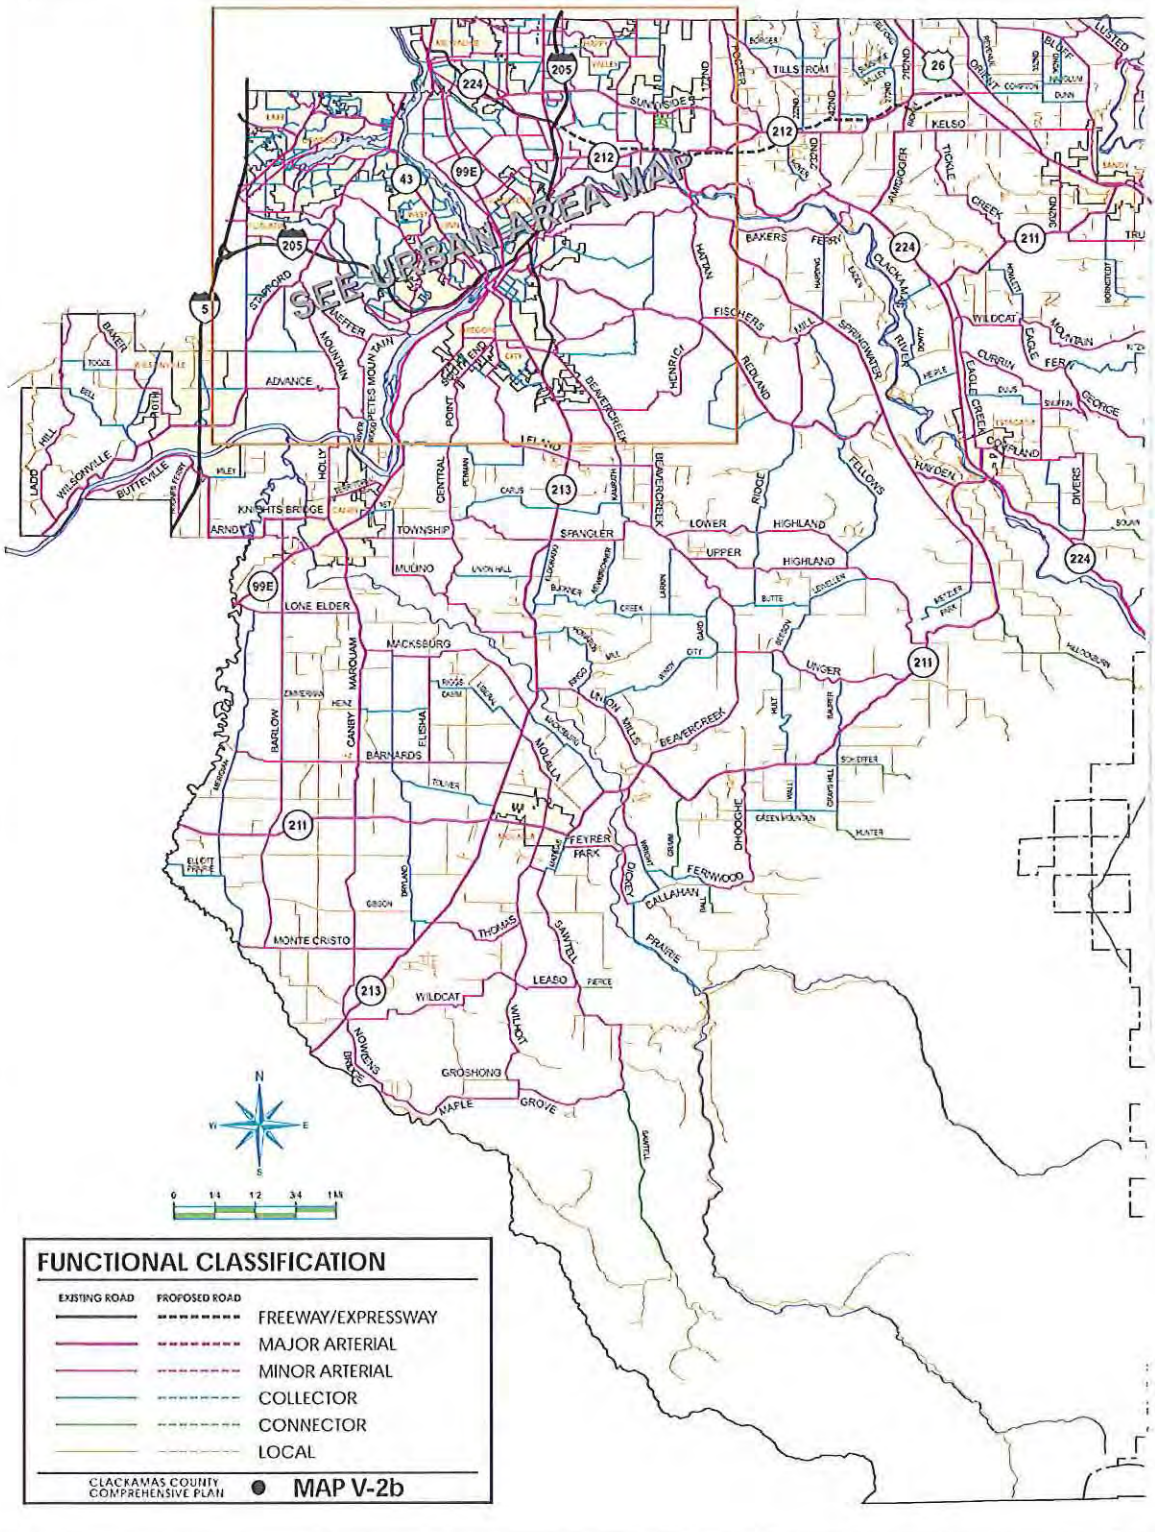
Minor Collector
- Spaced at intervals to collect traffic from local roads and bring all developed areas within a reasonable distance of a collector road; and
- Provide service to any remaining smaller communities and traffic generators; and
- Link locally important traffic generators with their local constituents.

Local
- Primarily provide access to adjacent lands; and
- Provide relatively short travel distances compared to higher classed facilities.

The original (1998) RTSP included a list of roadways and their functional classification. As part of this 2005 Update, some changes are being made as shown in **Table 5-2**, which better reflect the current and future function of each roadway.

FUNCTIONAL CLASSIFICATION GUIDELINES

Classification	Number of Traffic Lanes	Purpose	Access Impacts	Examples
Freeway Expressway	4-8	Serves Interregional and Intrareginal Trips. Carries heavy volume at high speed.	Freeways and expressways are intended to move traffic and not provide direct access to land use activities. Access to these facilities will be from other arterials.	I-205 Milwaukie Expressway
Major Arterial	3-7 Urban 2-4 Rural	Carries local and through traffic to and from destinations outside local community, connects cities and rural centers. Moderate to heavy volume, moderate to high speed.	Direct Access to major arterials will be limited. Access should be restricted to major generators.	Sunnyside Road Boones Ferry Road Highway 26
Minor Arterial	2-5	Connects collectors to higher order roadways. Carries moderate volume at moderate speed.	Direct access will be limited, however to a lesser degree than major arterials. The number and location of driveways should be controlled.	Oatfield Road Beavercreek Road Borland Road



Classification	Number of Traffic Lanes	Purpose	Access Impacts	Examples
Collector	2	Principle carrier within neighborhoods or single land use areas. Links neighbor-hoods with major activity centers and arterials. Generally not for through traffic. Low to moderate volume; low to moderate speed. New collectors should intersect minor arterials rather than major arterials.	Collectors provide access to abutting land and to the arterial system. Access to individual parcels is usually allowed.	Roethe Road Welches Road Pilkington Road
Connector	2	Collects traffic from and distribute traffic to local streets within neighborhoods or industrial districts. Usually longer than local streets. Low traffic volumes and speeds. Primarily serves access and local circulation functions. Not for through traffic	Connectors provide direct access to abutting properties	Risley Ave Harold Ave Pleasant Ct
Local	2	Provides access to abutting property and connects to higher order roads. New local roads should intersect collectors or, if necessary, minor arterials.	Local streets provide direct access to abutting properties. Adjacent land is normally residential.	Blanton Street Windy City Road La Bonita Way

Minor Arterial	2 to 5	60' – 115'	36' – 90'	Yes In urban areas only	Yes	Yes In urban areas
Collector	2 to 3	60' – 85' Less if volume and land use density are low and terrain allows	32' – 61'	Yes In urban areas only	Yes	Yes In urban areas
Connector	2	55'	28' – 34' Residential 28' – 40' Industrial	Yes In urban areas only	If ROW allows	Yes In urban areas
Local	2	40' – 50'	28'	Yes***	No	Yes In urban areas
Alley	2	16'	16'	No	No	No

* - Preferred dimensions are not adjusted for adjacent land uses; additional right-of-way may be required for slope, sign, sidewalk and utility easements.

** - Required unless acquiring right-of-way is impractical due to wetlands, topographic conditions, resource protection, or preexisting development patterns.

*** - Sidewalks are required on all new streets within the Urban Growth Boundary and when development or redevelopment occurs on existing streets. (1/17/08)

I. EXECUTIVE SUMMARY

DEVELOPMENT DESCRIPTION

A zone change and conditions use application are required for development of the proposed Helicopter Transport Services facility. The site is currently zoned Exclusive Farm Use (EFU) and the proposed zone is Public (P). An airport use is a conditional use in the Public zone. It has been determined the zone change from EFU to P does not result in an increase in trip potential, so only the condition use application is addressed for conditions at buildout of the site.

The Helicopter Transport Services facility is a repair station for the company's helicopters. The company's helicopters are located around the world at different sites, and generally are brought back to this maintenance facility once a year in the late fall for major overhaul and repair during the winter months. After a several month overhaul and repair, the helicopters, pilot crews, mechanics, and fuel tank drivers, then return to service in the spring to specific locations based on contract needs for firefighting services with the company's clients. Thus, the activities within the facility are all related to helicopter maintenance. In addition, there is supporting administrative and management activities for the helicopter maintenance operation.

During the fire season, which runs from May through October/November, only support staff remain in the building, with an estimate of up to 30 employees working an 8:00 am - 5:00 pm shift. During the off-season, running from November through April, employment at the building will increase to up to 70 employees.

The site plan and access locations are still in development. Access will be provided to Keil Road, and will comply with Marion County access and spacing standards.

MAJOR FINDINGS

Trip generation estimates for the Helicopter Transport Services facility were prepared using the Institute of Transportation Engineers *Trip Generation*, Land Use – 110 (General Light Industrial) based on the anticipated peak seasonal 70 employees. A total of 211 daily, 34 AM peak hour and 36 PM peak hour trips are anticipated. Truck trips are expected to be less than 30 per day.

The intersection of OR 551 with Ehlen Road does not currently meet ODOT standards of v/c 0.70. The addition of site trips does not decrease the v/c in the critical PM peak hour. Improvements are planned, as noted in the Draft 2010-2013 STIP (key number 16121), to include building left turn lanes on Ehlen Road and a traffic separator to limit Boones Ferry to right turns. The Marion County 2005 Rural Transportation Plan, Table 8-5 also identifies improvements that are needed at the OR intersection.

- The Airport Road/Ehlen Road intersection is expected to operate at a level of service "F" in 2010 PM peak hour conditions regardless of site development, which is below Marion County standards. AM peak hour operation would remain at level of service "C". The City of Aurora is considering adding a traffic signal at this intersection in their TSP.

Queuing calculations were prepared for the OR 551 intersections in accordance with ODOT standards using SimTraffic software. The addition of trips from the proposed Helicopter Transport Services facility has little impact on the anticipated queue lengths at the study intersections. Long queues are currently experienced on the Ehlen Road eastbound approach to OR 551, cansed by the lack of a dedicated left turn lane. Both ODOT and Marion County have identified the need for dedicated left turn lanes, which would address the long queues currently occurring.

- Traffic signal warrants presented in the Manual on Uniform Traffic Control Devises were reviewed for the intersection of Ehlen Road with Airport Road, specifically Warrants 1 – Eight Hour Vehicular Volume, 2 – Four Hour Vehicular Volume, and 3 – Peak Hour. ODOT's sixteen hour volumes were used as a basis for review of the eight and four hour warrants. With the addition of site trips, Warrants 1 and 2 not met, and Warrant 3 is just met. Based on this analysis, a traffic signal is not recommended at this time.

  The need for right and left turn lanes at the study area intersections was reviewed using ODOT's turn-lane criterion. Right turn volumes on OR 551 at Keil Road will not meet ODOT's Right Turn Lane Criterion for either AM or PM peak hours.

  No left turn lanes are provided on OR 551 at the intersection with Keil Road. Given the high through volume on the highway, the left turn lane criterion is met with only 10 left turns in an hour. The criterion is met with existing AM peak hour volumes, but not with the PM peak hour volumes for the southbound left turn movement.

- The need for a left tnrn lane was also reviewed on Ehlen Road at the intersection with Airport Road, where no turn lanes are currently provided. The ODOT left turn criterion is met for both the Pre-Development AM and PM peak hour conditions.

MITIGATION MEASURES PROPOSED

With improvements already identified for the intersections of Ehlen Road with OR 551 and Airport Road, and costs that would exceed the proportionate impacts of the Helicopter Transport Services facility, it is recommended the project contribute a proportionate share of planned improvements.

II. INTRODUCTION

This transportation impact analysis has been prepared to support the proposed zone change and Conditional Use Permit for the 126,000 square foot Helicopter Transport Services facility in Aurora, Oregon. The site is currently zoned Exclusive Farm Use (EFU) and the proposed zone is Public (P). An airport use is a conditional use in the Public zone. The subject area is bound by the Aurora Airport to the west, vacant land to the north, Keil Road to the south, and Airport Road to the east. Figure 1 is a vicinity map indicating the property location.

PROJECT DESCRIPTION

The site is approximately 27.48 acres and is identified by Assessor's Map Township 4 Range 1W Section 11 Tax Lot 100 and Township 4 Range 1W Section 12b Tax Lot 400. There are currently two dwelling units on the property.

The Helicopter Transport Services facility is a repair station for the company's helicopters. The company's helicopters are located around the world at different sites, and generally are brought back to this maintenance facility once a year in the late fall (November) for major overhaul and repair during the winter months. After a several month overhaul and repair, the helicopters, pilot crews, mechanics, and fuel tank drivers, then return to service in the spring (April/May) to specific locations based on contract needs for firefighting services with the company's clients. Thus, the activities within the facility are all related to helicopter maintenance. Such use generally includes airframe, rotor, engine, electronics, and radio repair items. In addition, there is supporting administrative and management activities for the helicopter maintenance operation.

During the fire season, which runs from May through October/November, only support staff remain in the building, with an estimate of up to 30 employees working an 8:00 am - 5:00 pm shift. During the off-season, running from November through April, employment at the building will increase to up to 70 employees.

Site access is proposed to Keil Road at several locations. The number and location of access points will be refined based on site conditions and will comply with Marion County access and spacing standards. Figure 2 attached is the preliminary site plan.

SCOPE OF REPORT

As identified in our March 17, 2009 scope letter to Marion County, the zone change from EFU to P does not result in an increase in trip potential. For this reason, only the condition use application is addressed for conditions at buildout of the site.

Due to the project location, both the Marion County and the Oregon Department of Transportation (ODOT) have jurisdiction over certain study area intersections. Based on the March 17, 2009 scope letter, May 14, 2009 trip generation letter and conversations with County staff, the analysis study area includes the following intersections as well as the site access to Keil Road:

MACKENZIE

ODOT
- OR 551/Keil Road
- OR 551/Ehlen Road

Marion County
- Airport Road/Keil Road
- Airport Road/Ehlen Road

Analysis was conducted for the AM and PM peak hour for the following scenarios:

- 2009 Existing
- 2010 Pre-Development
- 2010 Post-Development

All correspondence is included in the appendix.

III. EXISTING CONDITIONS

TRANSPORTATION FACILITIES

The following summarizes the study area roadway classifications and descriptions:

TABLE 1 – ROADWAY CHARACTERISTICS						
Roadway	ODOT/City Classification	Posted Speed	Travel Lanes	Bike Lanes	On-Street Parking	Sidewalks
OR 551	Rural Arterial – Regional Hwy	50	2	No	No	No
Ehlen Road	Arterial	35/55	2	No	No	No
Airport Road	Major Collector	35/55	2	No	No	No
Keil Road	Local Road	25	2	No	No	No

Currently, the OR 551/Ehlen Road intersection is signalized. The other intersections are stop controlled for the minor street approach.

Figure 3 illustrates study area intersection existing lane configurations and traffic controls.

EXISTING TRAFFIC COUNTS

Traffic volume data was either collected at the study intersections between 7 AM – 9 AM and 4 AM – 6 PM in April, 2009 or agency supplied. Sixteen hour counts for the intersection of Ehlen Road/Airport Road were conducted by ODOT in 2008 and were used in review of signal warrants for that intersection.

Turning movement counts for OR 551 were not conducted in the peak month (August); therefore, a 3.2% seasonal volume adjustment was made using the 2008 Seasonal Trend Table, in accordance with ODOT standards. Calculations and raw count data are included in the appendix.

Figures 4A and 4B present 2009 intersection traffic volumes including the seasonally adjusted volumes on OR 551.

PLANNED PUBLIC IMPROVEMENTS

ODOT

The Draft 2010-2013 STIP (key number 16121) indicates improvements are scheduled to begin in 2012 at the OR 551/Ehlen Road intersection. Identified improvements include building left turn lanes on Ehlen Road and a traffic separator to limit Boones Ferry to right turns.

Marion County

The Marion County 2005 Rural Transportation Plan, Table 8-5 also identifies improvements are needed at the OR 551/Ehlen Road intersection. Potential improvements may include "*Left Turn Lane on Ehlen; possible realignment; possible traffic signal at Boones Ferry coordinated with State Highway signal*".

City of Aurora
The City of Aurora is currently in the process of a TSP update with public hearings scheduled for July 2009. According to City and County staff, a recommendation for a signal at the Ehlen Road/Airport Road intersection is expected to be included in the TSP.

CRASH ANALYSIS

When evaluating relative intersection safety, consideration is given to the total number and types of crashes occurring and the number of vehicles entering the intersection. This leads to the concept known as "crash rate", usually expressed in terms of the number of crashes occurring per one million vehicles entering the intersection (mev). Intersections having a crash rate less than 1.0/mev are generally considered relatively safe and with crash rates higher than 1.0/mev, consideration may be given to correcting operational problems.

Crash data for the study area intersections were provided by the ODOT Crash Analysis and Reporting Unit (CARU) for January 2003 through December 2007. The following table represents calculated crash rates at the study intersections for the five-year data period. Annual traffic entering the intersections was estimated by multiplying the average daily traffic (ADT) entering the intersection by 365. ADT was estimated by multiplying the intersection PM peak hour volumes by a factor of 10, which coincides with volumes found in the 2007 Oregon State Flow Map.

TABLE 2 – CRASH DATA

Intersection	2004	2005	2006	2007	2008	Total	Crash Rate
OR 551/Keil Road	2	5	1	4	1	13	0.72
OR 551/Ehlen Road	4	2	10	8	7	31	1.09
Airport Road/Keil Road	0	0	0	0	0	0	0.00
Airport Road/Ehlen Road	1	0	0	2	0	3	0.14

All study intersections have crash rates below the 1.0 mev threshold with the exception of the OR 551/Ehlen Road intersection, with a crash rate of 1.09/MEV.

The OR 551/Ehlen Road intersection is currently listed in the ODOT Highway Safety Improvement Program (HSIP) Top 5% Report. The report describes the problem as 43% of crashes turning related, with angle and rear-end type crashes also. It noted the Boones Ferry Road intersection approximately 260 feet to the west causing issues with back to back left turns and traffic backing up through the highway. It lists potential remedies as designated left turn lanes on Ehlen Road and a traffic separator restricting turn movements to and from Boones Ferry Road. The Draft 2010-2013 STIP (key number 16121) indicates improvements are scheduled to begin in 2012. A copy of the HSIP page is located in the appendix.

GROUP MACKENZIE

IV. PRE-DEVELOPMENT CONDITIONS

IN-PROCESS TRAFFIC VOLUMES

In-process traffic volumes are generated by approved projects not yet complete at the time of this analysis. County Staff has stated there are no significant in-process projects to be included in the analysis.

BACKGROUND TRAFFIC GROWTH

Background growth is general traffic growth not related to specific projects. These volumes represent anticipated growth in the project area over the planning period. Individual neighborhoods and streets may have higher growth rates in the short term, but the overall growth rate is averaged over the planning period.

The background traffic growth rate was based on the Marion County Rural Transportation Systems Plan (RTSP) and Automatic Traffic Recorder (ATR) 24-016 data. The RTSP, Table 6-2, included in appendix, presents anticipated 2025 daily traffic volumes. Growth rates for the study area roadways range from 1.8% to 2.5%.

ATR 24-016 is located 0.22 miles south of Ehlen Road on OR 551. Being near the study area and on the major study area roadway, this ATR is a fair representation of traffic growth in the area. The ATR data presents daily traffic volumes for years 1998-2007. The 10 year growth rate is 2.0% and the 5 year growth rate is 1.0%.

For the purposes of this study a conservative 2.5% growth rate was used for all future year analyses. Figures 5A and 5B illustrates one year of background traffic growth volumes for the AM and PM peak hour.

PRE-DEVELOPMENT TRAFFIC VOLUMES

Pre-Development traffic volumes are the sum of existing traffic volumes and background traffic growth. Figures 6A and 6B presents the 2010 Pre-Development volumes in the AM and PM peak hours.

V. SITE DEVELOPMENT

TRIP GENERATION

The Helicopter Transport use is best categorized using Institute of Transportation Engineers *Trip Generation,* Land Use – 110 (General Light Industrial). Based on the anticipated operation for Helicopter Transport, it is more appropriate to estimate trips based on employees than on building size. For purposes of this analysis, the higher winter employee estimate has been used to provide a "worst case" scenario. Based on discussions with County staff, average trip rates for the peak hour of the generator will be used in the trip generation estimates.

The anticipated trip generation is presented in the following table based on the number of employees.

TABLE 3 – TRIP GENERATION

Land Use (Code)	Employees	ADT	AM Peak Hour			PM Peak Hour		
			Total	Enter	Exit	Total	Enter	Exit
Light Industrial (110)	70	211	34	28	6	36	8	28

The proposed facility is anticipated to generate an additional 211 ADT, 34 AM and 36 PM peak hour trips. Truck trips are expected to be less than 30 per day.

TRIP DISTRIBUTION AND TRAFFIC ASSIGNMENT

Trip distribution and traffic assignment were based on a review study area traffic patterns and engineering judgment. In general, 30% of site trips are anticipated to travel north on OR 551, 10% south on OR 551, 20% both west and east on Ehlen Road, and 10% east on Arndt Road. Figures 7A and 7B illustrate trip distribution and traffic assignment for the AM and PM peak hours, respectively.

POST-DEVELOPMENT TRAFFIC VOLUMES

Post-Development traffic volumes are the sum of Pre-Development and proposed development traffic volumes. Figures 8A and 8B illustrate the 2010 Post-Development traffic volumes for the AM and PM peak hour, respectively.

VI. INTERSECTION AND ROADWAY ANALYSIS

OPERATION ANALYSIS DESCRIPTION

Intersection operation characteristics are generally defined by two measurements: volume-to-capacity (v/c) ratio and level-of-service (LOS). ODOT uses v/c ratio and the County uses LOS and delay to determine intersection performance. Since both agencies have roadways within the project impact area, both measurements are included in the analysis.

V/c ratio is a measurement of capacity used by a given traffic movement for an entire intersection. It is defined by the rate of traffic flow or traffic demand divided by the theoretical capacity. Based on the 1999 Oregon Highway Plan (OHP), OR 551 is a Regional Highway. The OHP requires a maximum v/c ratio of 0.70 be maintained on OR 551 at the study area intersections.

LOS is a measure of the average control delay (in seconds) experienced by drivers at an intersection and is described by a letter on the scale from 'A' to 'F'. LOS 'A' represents optimum operating conditions and minimum delay. LOS 'F' indicates over capacity conditions causing unacceptable delay. LOS 'D' is considered the acceptable minimum by Marion County (Marion County Department of Public Works Transportation Impact Analysis (TIA) Requirements).

PEAK HOUR FACTOR

The peak hour factor (PHF) is used to determine the design hour flow rate and is defined as the ratio of total hourly flow to the peak flow rate within the hour. For analyses contained in this report, 15-minute time increments are used to measure intersection approach volumes; therefore, the PHF is the total hourly volume of all approaches divided by 4 times the peak 15-minute total approach volume. As roads approach capacity, their peak hour factors approach 1.0.

PHFs were calculated for all study area intersections. For the 2010 analysis year, PHFs were assumed to remain consistent with existing 2009 PHFs. PHF calculations are included on the volume summary sheet.

OPERATION ANALYSIS

Operation analysis was conducted for the AM and PM peak hours using Synchro software and the Highway Capacity Manual Methodologies, and following ODOT's Analysis Procedures Manual. The following scenarios were analyzed:

- 2009 Existing
- 2010 Pre-Development
- 2010 Post-Development

In accordance with ODOT standards for areas outside the Portland MPO a saturation flow rate of 1,750 passenger cars per hour of green per lane was used in the analysis. This is consistent with Marion County's standard of 1,800 unless justified by a measurement at that location.

Calculation results are summarized in the following tables. Calculation sheets from the Synchro analysis are included in the appendix.

TABLE 4 – INTERSECTION OPERATIONS										
Intersection	Time Period	2009 Existing			2010 Pre-Development			2010 Post-Development		
OR 551/Keil Road	AM	22.7	0.26	C	23.7	0.27	C	24.9	0.30	C
	PM	31.8	0.28	D	33.7	0.30	D	35.6	0.36	E
OR 551/Ehlen Road	AM	30.0	0.74	C	32.0	0.76	C	32.6	0.77	C
	PM	32.5	0.81	C	35.1	0.83	D	35.6	0.83	D
Airport Road/Keil Road	AM	10.6	0.02	A	10.7	0.02	A	10.7	0.03	A
	PM	10.7	0.09	A	10.8	0.09	B	11.1	0.13	A
Airport Road/Ehlen Road	AM	17.0	0.14	C	17.5	0.15	C	17.9	0.15	C
	PM	46.7	0.75	E	53.6	0.80	F	59.0	0.84	F
Keil Road/Site Access	AM	-	-	-	-	-	-	8.7	0.01	A
	PM	-	-	-	-	-	-	8.8	0.03	A

Signalized/Unsignalized Criteria: Delay-v/c-LOS (unsignalized v/c reported for the critical movement)

The Keil Road approach to OR 551 is anticipated to operate at a 0.36 v/c and a level of service "E" with the addition of site trips. This is consistent with ODOT and Marion County standards for an unsignalized intersection.

The OR 551/Ehlen Road intersection does not meet ODOT's mobility standard of a 0.70 v/c, with an anticipated 0.83 in the PM peak hour pre-development scenario. The addition of site trips does not change the v/c, so no mitigation is required with the project. Both ODOT and Marion County have identified that dedicated left turn lanes are needed at this intersection to improve safety and capacity; identified on ODOT's Draft 2010-2013 STIP .

The Airport Road/Keil Road intersection will continue to operate at a level of service "A" with the addition of site trips.

The Airport Road/Ehlen Road intersection is expected to operate at a level of service "F" in 2010 PM peak hour conditions regardless of site development. AM peak hour operation would remain at level of service "C". The City of Aurora is considering adding a traffic signal at this intersection in their TSP. The project is expected to add 15 PM peak hour trips or a 1.3% increase over existing volumes.

For purposes of this analysis, one access was assumed to Keil Road. The number and locations of site accesses has yet to be determined.

QUEUING ANALYSIS

Queuing calculations were prepared for the OR 551 intersections in accordance with ODOT standards using SimTraffic software. The following table presents the queuing results at each of the study intersections.

TABLE 5 – QUEUE LENGTHS (FEET)								
Intersection	Approach	Movement	2009		2010			
			Existing		Pre-Development		Post-Development	
			AM	PM	AM	PM	AM	PM
OR 551/ Keil Road	EB	Lt, Th, Rt	75	50	50	50	75	75
	WB	Lt, Th, Rt	25	75	50	75	50	75
	NB	Lt, Th, Rt	25	25	25	25	50	25
	SB	Lt	50	25	50	25	75	25
OR 551/ Ehlen Road	EB	Lt, Th, Rt	975	2100	1500	2025	1300	2150
	WB	Lt, Th, Rt	375	300	550	300	300	275
	NB	Lt	125	100	125	75	125	75
		Th	350	275	375	575	425	275
		Rt	50	25	75	25	50	25
	SB	Lt	100	325	75	325	75	300
		Th	175	675	175	750	175	625
		Rt	100	200	100	200	100	200
Airport Road/ Keil Road	EB	Lt, Rt	25	50	25	50	50	50
	NB	Lt	25	0	0	0	0	0
Airport Road/ Ehlen Road	EB	Th, Rt	75	75	75	50	100	75
	SB	Lt, Rt	50	175	75	175	75	175

The addition of trips from the proposed Helicopter Transport Services facility has little impact on the anticipated queue lengths at the study intersections. Long queues are currently experienced on the Ehlen Road eastbound approach to OR 551, caused by the lack of a dedicated left turn lane. Both ODOT and Marion County have identified the need for dedicated left turn lanes, which would address the long queues currently occurring.

SIGNAL WARRANT ANALYSIS

The City of Aurora is currently considering including a traffic signal at the intersection of Ehlen Road with Airport Road in their TSP. Traffic signal warrants presented in the Manual on Uniform Traffic Control Devises were reviewed for this intersection with the post-development traffic volumes. Specifically, Warrants 1 – Eight Hour Vehicular Volume, 2 – Four-Hour Vehicular Volume, and 3 – Peak Hour were reviewed.

For Warrant 1 – Eight Hour Vehicular Volume, ODOT's 16 hour counts were used in the review. The count was conducted in 2008, so two years of background growth were added to the hourly volumes to estimate conditions in 2010, and 10 trips were added to both the minor and major streets (this is a worst case estimate as only 15 PM peak hour trips are added). The volume threshold is only met for three hours for both conditions A and B of the warrant. This warrant is not met, as eight hours must meet the volume thresholds.

Warrant 2 - Four-Hour Vehicular Volume was also reviewed using ODOT's 16 hour counts and the addition of background growth and site traffic. As shown on the warrant figure in the appendix, only three of the hours meet the volume standards. This warrant is not met.

The peak hour warrant was reviewed using PM peak hour volumes for the post-development scenario. The warrant is just met as shown in the attached figure.

With Warrants 1 and 2 not met with development of the site trips, and Warrant 3 just met, a signal is not recommended at this time.

Copies of the warrant worksheets and volume summaries are included in the appendix.

TURN LANE WARRANT ANALYSIS

The need for right and left turn lanes at the study area intersections was reviewed using ODOT's turn-lane criterion.

No right turn lane is currently provided on OR 551 at Keil Road northbound. With development of the site, volumes will not meet ODOT's Right Turn Lane Criterion for either AM or PM peak hours. ODOT's right turn figure is included in the appendix.

No left turn lanes are provided on OR 551 at the intersection with Keil Road. Given the high through volume on the highway (over 900 AM and 1200 PM vehicles per hour in both directions), the left turn lane criterion is met with only 10 left turns in an hour. Pre-development conditions include 23 AM peak hour. The addition of site trips increases the AM left turn volume to 29 trips. The PM volumes are only 6 left turns in the pre-development scenario, and 8 left turns with the addition of site trips. Only the AM peak hour volume meets the Left Turn Lane Criterion.

The need for a left turn lane was also reviewed on Ehlen Road at the intersection with Airport Road, where no turn lanes are currently provided. The ODOT left turn criterion is met for both the pre-development AM and PM peak hour conditions.

PEDESTRIAN AND BICYCLE

None of the roadways within the study area have striped bike lanes or sidewalks. A paved shoulder is currently provided on Ehlen Road.

VII. MITIGATION

The intersections of Ehlen Road with OR 551 and Airport Road currently do not meet operating standards even without the proposed Helicopter Transport Services facility. The project will add less than 2% to these intersections and have little impact above the pre-development conditions. Both intersections have improvements identified, including a traffic signal at Airport Road and dedicated left turn lanes at Ehlen Road. A warrant analysis indicates a traffic signal is not needed with the addition of site trips.

Existing traffic volumes at the intersection of OR 551 meet ODOT's left turn criterion for the AM peak hour. The site will add to the southbound left turn movement, increasing from the existing 22 to 29 left turns.

Costs for all of the identified future improvements would likely exceed the proportionate impacts of the Helicopter Transport Services facility. Therefore, it is recommended that the project contribute a proportionate share of planned improvements.

VIII. SUMMARY

This transportation impact analysis has been prepared to support the proposed zone change and Conditional Use Permit for the 126,000 square foot Helicopter Transport Services facility in Aurora, Oregon. The site is currently zoned Exclusive Farm Use (EFU) and the proposed zone is Public (P). An airport use is a conditional use in the Public zone. The 27.48 acre site is bound by the Aurora Airport to the west, vacant land to the north, Keil Road to the south, and Airport Road to the east. There are currently two dwelling units on the property.

As identified in our March 17, 2009 scope letter to Marion County, the zone change from EFU to P does not result in an increase in trip potential. For this reason, only the condition use application is addressed for conditions at buildout of the site. Both Marion County and the Oregon Department of Transportation (ODOT) have jurisdiction over study area intersections. This analysis addresses requirements of both jurisdictions. Analysis was conducted for the AM and PM peak hour for the 2009 Existing, 2010 Pre-Development and 2010 Post-Development.

The Helicopter Transport Services facility is a repair station for the company's helicopters. The company's helicopters are located around the world at different sites, and generally are brought back to this maintenance facility once a year in the late fall for major overhaul and repair during the winter months. After a several month overhaul and repair, the helicopters, pilot crews, mechanics, and fuel tank drivers, then return to service in the spring to specific locations based on contract needs for firefighting services with the company's clients. Thus, the activities within the facility are all related to helicopter maintenance. In addition, there is supporting administrative and management activities for the helicopter maintenance operation.

During the fire season which runs from May through October/November, only support staff remain in the building, with an estimate of up to 30 employees working an 8:00 AM -5:00 PM shift. During the off-season, running from November through April, employment at the building will increase to up to 70 employees.

The site plan and access locations are still in development. Access will be provided to Keil Road, and will comply with Marion County access and spacing standards.

Traffic volume data was either collected at the study intersections between 7 AM – 9 AM and 4 AM – 6 PM in April 2009, and sixteen hour counts for the intersection of Ehlen Road/Airport Road were conducted by ODOT in 2008. A seasonal volume adjustment was made to OR 551 volumes using the 2008 Seasonal Trend Table, in accordance with ODOT standards.

Improvements are planned at the OR 551/Ehlen Road intersection, as noted in the Draft 2010-2013 STIP (key number 16121), to include building left turn lanes on Ehlen Road and a traffic separator to limit Boones Ferry to right turns. The Marion County 2005 Rural Transportation Plan, Table 8-5 also identifies improvements are needed at the OR 551/Ehlen Road intersection. Potential improvements may include "*Left Turn Lane on Ehlen; possible realignment; possible traffic signal at Boones Ferry coordinated with State Highway signal*".

The City of Aurora is currently in the process of a TSP update with public hearings scheduled for July 2009. According to City and County staff, a recommendation for a signal at the Ehlen Road/Airport Road intersection is expected to be included in the TSP.

Crash data for the study area intersections were reviewed to determine crash rates. Only the intersection of OR 551 with Ehlen Road has a crash rate above 1.0 crashes per million entering vehicles, as has been noted in the ODOT Highway Safety Improvement Program (HSIP) Top 5% Report. The planned left turn improvements are expected to address the high crash rate.

Pre-development traffic conditions were estimated by adding one year of 2.5% background growth to existing volumes. County staff has stated there are no significant in-process projects to be included in the analysis.

Trip generation estimates for the Helicopter Transport Services facility were prepared using Institute of Transportation Engineers *Trip Generation,* Land Use – 110 (General Light Industrial) based on the anticipated peak seasonal 70 employees.

Based on discussions with County staff, average trip rates for the peak hour of the generator will be used. A total of 211 daily, 34 AM peak hour and 36 PM peak hour trips are anticipated. Truck trips are expected to be less than 30 per day.

Capacity calculations were prepared in accordance with ODOT standards using Synchro software, which follows the Highway Capacity Manual methodologies.

The intersection of OR 551 with Ehlen Road does not currently meet ODOT standards of v/c 0.70, and the addition of site trips does not decrease the v/c in the critical PM peak hour. Improvements have been identified for this intersection to include left turn lanes on Ehlen Road.

The Airport Road/Ehlen Road intersection is expected to operate at a level of service "F" in 2010 PM peak hour conditions regardless of site development, which is below Marion County standards. AM peak hour operation would remain at level of service "C". The City of Aurora is considering adding a traffic signal at this intersection in their TSP.

Queuing calculations were prepared for the OR 551 intersections in accordance with ODOT standards using SimTraffic software. The addition of trips from the proposed Helicopter Transport Services facility has little impact on the anticipated queue lengths at the study intersections. Long queues are currently experienced on the Ehlen Road eastbound approach to OR 551, caused by the lack of a dedicated left turn lane. Both ODOT and Marion County have identified the need for dedicated left turn lanes, which would address the long queues currently occurring.

Traffic signal warrants presented in the Manual on Uniform Traffic Control Devises were reviewed for the intersection of Ehlen Road with Airport Road, specifically Warrants 1 – Eight Hour Vehicular Volume, 2 – Four-Hour Vehicular Volume, and 3 – Peak Hour. ODOT's sixteen hour volumes were used as a basis for review of the eight and four hour warrants. With the addition of site trips, Warrants 1 and 2 not met, and Warrant 3 is just met. Based on this analysis, a traffic signal is not recommended at this time.

The need for right and left turn lanes at the study area intersections was reviewed using ODOT's turn-lane criterion. Right turn volumes on OR 551 at Keil Road will not meet ODOT's Right Turn Lane Criterion for either AM or PM peak hours.

No left turn lanes are provided on OR 551 at the intersection with Keil Road. Given the high through volume on the highway, the left turn lane criterion is met with only 10 left turns in an hour. The criterion is met with existing AM peak hour volumes, but not with the PM peak hour volumes for the southbound left turn movement.

The need for a left turn lane was also reviewed on Ehlen Road at the intersection with Airport Road, where no turn lanes are currently provided. The ODOT left turn criterion is met for both the pre-development AM and PM peak hour conditions.

With improvements already identified for the intersections of Ehlen Road with OR 551 and Airport Road, and costs that would exceed the proportionate impacts of the Helicopter Transport Services facility, it is recommended the project contribute a proportionate share of planned improvements.

CHAPTER 1: INTRODUCTION AND SUMMARY

This study evaluates the transportation impacts for the proposed Fred Meyer development located on the northeast corner of Boones Ferry Road and Bailey Street in the City of Wilsonville, Oregon. It also recommends mitigation measures to offset the impacts.

The currently proposed development includes a 155,881 square-foot Fred Meyer building (which includes the Fred Meyer store as well as 10,100 square feet of additional tenant space[1]), six other buildings (which include 50,879 square feet of retail/office use and a 3,316 square-foot restaurant), and 60 residential apartment units.[2] The site has four access points to the public street system: two on SW Boones Ferry Road and two on SW Bailey Street.

The study area for the project is shown in Figure 1 and was determined based on discussions with City staff. Within the study area, there are seven study intersections where traffic operations are analyzed:

- Boones Ferry Road/Wilsonville Road
- I-5 Southbound Ramps/Wilsonville Road
- I-5 Northbound Ramps/Wilsonville Road
- Town Center Loop West/Wilsonville Road
- Boones Ferry Road/Fred Meyer north access
- Boones Ferry Road/Fred Meyer south access
- Boones Ferry Road/Bailey Street

Project traffic impacts were evaluated at the study intersections for the weekday PM peak hour. The impact analysis includes trip generation, trip distribution, PM peak hour project trips through the two City of Wilsonville I-5 interchange areas, and future traffic operating conditions. The analysis also accounts for developments in the area that have Stage II approval, including those under construction but not yet occupied. Recommended mitigations are then described and analyzed. Included in the mitigations section of Chapter 3 is a conceptual cross-section layout for Boones Ferry Road between Bailey Road and Wilsonville Road (see Figure 5).

Other issues addressed in this report include Saturday peak hour safety analysis and a project site evaluation (which addresses access location and spacing), sight distance, project frontage adjustments, traffic signal warrants, internal circulation, and parking. At the end of the report, a summary is presented of the recommended transportation mitigation measures that are expected to offset the negative transportation impacts of future traffic growth.

Table 1 lists important characteristics of the study area and proposed project.

[1] Tenant space within a Fred Meyer building is typically occupied by businesses providing additional goods or services, such as coffee shops or banks.

TABLE 1: Study Area and Proposed Project Characteristics

Study Area	
Number of Study Intersections	7
Analysis Periods	Weekday PM Peak (4:00 p.m. to 6:00 p.m.) Saturday Midday Peak (11:00 a.m. to 1:00 p.m.)
Proposed Development	
Total Weekday PM Peak Hour Project Trips	1,255 (627 in, 628 out)
Non Pass-by[a] Weekday PM Peak Hour Project Trips	937 (468 in, 469 out)
Net New Weekday PM Peak Hour Project Trips	488 (244 in, 244 out)
Estimated Weekday PM Peak Hour Project Trips Through I-5/Wilsonville Road Interchange[b]	612 (768 new trips – 156 grandfathered trips)
Estimated Weekday PM Peak Hour Project Trips Through I-5/Elligsen Road Interchange	2
Vehicle Access Points	Four full access points: two on SW Boones Ferry Road and two on SW Bailey Street.
Project Vicinity	
Pedestrian Facilities	Sidewalks to be constructed along project frontage of Boones Ferry and Bailey Street with connection to Wilsonville Road.
Bicycle Facilities	Sidewalks and bike lanes on Boones Ferry Road and Wilsonville Road
Nearest Transit Stop	Boones Ferry Road (SMART Routes 1X and 203)

[a] Non-Pass-by project trips account for pass-by and internal trip reductions.
[b] The Wilsonville Road interchange area includes the Boones Ferry Road/Wilsonville Road intersection. Some of the new project trips that pass through this intersection are diverted trips.

Project Traffic Impact

To determine project impact at the study intersections, traffic operating conditions were analyzed at the study intersections during the weekday PM peak hour for the following four scenarios:

- Existing Conditions
- Existing plus Project
- Existing plus Stage II
- Existing plus Project plus Stage II

The study intersection operating conditions (assuming the existing roadway network) for the "Existing," "Existing plus Stage II," and "Existing plus Project plus Stage II" scenarios are listed in Table 2. Under existing conditions, all study intersections meet the City of Wilsonville LOS "D" standard and the Oregon Department of Transportation (ODOT) 0.99 volume-to-capacity (V/C) standard during the PM peak hour. With the addition of stage II traffic, both northbound and southbound ramps exceed operating standards. When project traffic is also added, all four study intersections on Wilsonville Road exceed operating standards. In addition, the two Fred Meyer development accesses on Boones Ferry Road operate below desired levels.

TABLE 2: Study Intersection Operating Conditions (PM Peak Hour)

Intersection	Operating Standard	Existing Conditions			Existing + Stage II			Existing + Stage II + Project		
		Delay	*LOS*	*V/C*	*Delay*	*LOS*	*V/C*	*Delay*	*LOS*	*V/C*
Signalized										
Boones Ferry Rd / Wilsonville Rd	LOS D	36.0	D	0.77	44.5	D	0.89	>80	**F**	>1.0
I-5 SB Ramps / Wilsonville Rd	LOS D, 0.99 V/C	36.1	D	0.90	79.1	**E**	**>1.0**	>80	**F**	**>1.0**
I-5 NB Ramps / Wilsonville Rd	LOS D, 0.99 V/C	37.2	D	0.91	70.9	**E**	**>1.0**	>80	**F**	**>1.0**
Town Center Loop W / Wilsonville Rd	LOS D	37.7	D	0.80	51.2	D	0.94	56.2	**E**	0.97
Unsignalized										
Boones Ferry Rd / North Project Access	-	12.7	A/B	0.13	13.9	A/B	0.18	>50	A/F	>1.0
Boones Ferry Rd / South Project Access	-	11.9	A/B	0.14	12.4	A/B	0.15	>50	A/F	0.71
Boones Ferry Rd / Bailey St	LOS D	10.9	A/B	0.06	11.6	A/B	0.06	13.8	A/B	0.12

Signalized intersections:
Delay = Average Stopped Delay per Vehicle (sec) for All Movements
LOS = Level of Service of Intersection
V/C = Volume-to-Capacity Ratio of Intersection
Bold Underlined values do not meet standards.

Unsignalized intersections:
Delay = Average Stopped Delay per Vehicle (sec) at Worst Movement
LOS = Level of Service of Major Street/Minor Street
V/C = Volume-to-Capacity Ratio of Worst Movement
Bold Underlined values do not meet standards.

Planned Wilsonville Road Improvements

Due to capacity constraints at the I-5/Wilsonville Road interchange, improvements are planned that will provide additional capacity along Wilsonville Road between Boones Ferry Road and Town Center Loop West. Recently, the City has signed an intergovernmental agreement to construct the first phase of improvements, which will consist of a Wilsonville Road 6-lane enhanced alternative that focuses on ramp improvements and on adjustments to intersection lane configurations.

For the four study intersections on the Wilsonville Road corridor, a Synchro™ model of the improved Wilsonville Road cross-section was used to analyze intersection operating conditions for each of the three

future PM peak hour traffic scenarios (i.e., "Existing plus Project", "Existing plus Stage 2", and "Existing plus Project plus Stage 2"). The results of the analysis are listed in Table 3. As shown in the table, all four study intersections on Wilsonville Road comply with the City of Wilsonville LOS D operating standard for each of the three scenarios. The two I-5 ramps also meet the Oregon Department of Transportation (ODOT) 0.99 volume-to-capacity (V/C) standard.

TABLE 3: Future Operating Conditions of Wilsonville Road Intersections with Six-Lane Enhanced Alternative Improvements (PM Peak Hour)

Intersection	Operating Standard	Existing + Project + Improvements			Existing + Stage II + Improvements			Existing + Project + Stage II + Imps.		
		Delay	*LOS*	*V/C*	*Delay*	*LOS*	*V/C*	*Delay*	*LOS*	*V/C*
Signalized										
Boones Ferry Rd / Wilsonville Rd	LOS D	37.7	D	0.66	31.1	C	0.67	39.3	D	0.75
I-5 SB Ramps / Wilsonville Rd	LOS D	20.6	C	0.64	22.0	C	0.72	22.7	C	0.76
I-5 NB Ramps / Wilsonville Rd	LOS D	22.9	C	0.64	23.6	C	0.74	24.7	C	0.78
Town Center Loop W / Wilsonville Rd	LOS D	35.7	D	0.66	40.3	D	0.75	43.2	D	0.78

Delay = Average Stopped Delay per Vehicle (sec)
LOS = Level of Service of Intersection
V/C = Volume-to-Capacity Ratio of Intersection
Bold Underlined values do not meet standards.

Project Impact Mitigations

To mitigate impacts at the north and south project accesses onto Boones Ferry Road, three Boones Ferry Road site frontage improvements are needed (these are in addition to the planned improvements to Boones Ferry Road that are shown on the Fred Meyer site plan):

- At the north Fred Meyer access, install a median along Boones Ferry Road to restrict movements to right-in/right-out for both the Lowries Marketplace and Fred Meyer developments; this will increase safety by removing turn lane needs at this access and will provide for better traffic flow (i.e. queuing spillback that impact Wilsonville Road). It will also accommodate turn lane placement and storage needs for the Boones Ferry Road/Wilsonville Road intersection's northbound approach traffic. Also, if desired, the north Fred Meyer access may be converted to a right-out only driveway and narrowed to one lane, which would allow additional space on the project site that could be used to increase a building pad size, the number of parking stalls, etc.
- Between the north and south Fred Meyer accesses, extend the second northbound through lane (which becomes a right turn lane at the Wilsonville Road intersection) to ensure approximately 600 feet of storage is provided for the northbound right turn lane at Wilsonville Road. This distance meets the short-term Fred Meyer needs and the long-term 20-year Wilsonville Road Interchange design needs.
- At the south Fred Meyer access, install a traffic signal to facilitate egress movements from the Lowries and Fred Meyer developments. There should also be two egress lanes (i.e., a right turn lane and a through-left lane). It is expected that warrants will be met in the near future due to the

addition of nearby developments. Installing the traffic signal with the Boones Ferry Road improvements will assure continuity between the improvements and the traffic signal construction. The signal should be coordinated with the Boones Ferry Road/Wilsonville Road signal. To enable the coordination, interconnect conduit and cable will need to be installed between the signals.

A conceptual layout of Boones Ferry Road that shows all improvements and mitigations is presented in Figure 5, which can be found in Chapter 3: Impact Analysis. The mitigated analysis results are listed in Table 4 for the north Fred Meyer access and the Boones Ferry Road/Bailey Street intersection and in Table 5 for both traffic control options at the south access (i.e., a traffic signal and four-way stop control). As shown in the tables, the three intersections have good operation levels and the two traffic control options for the south access are comparable to one another. The main benefits from the installation of the traffic signal are the ability to service platoon flow from the Boones Ferry Road/Wilsonville Road intersection and increased future capacity that will be available.

TABLE 4: Boones Ferry Road Mitigated Future Operating Conditions (PM Peak Hour)

Intersection	Operating Standard	Existing + Project + Stage II + Mitigated		
		Delay	*LOS*	*V/C*
Unsignalized – Two-way Stop Control				
Boones Ferry Rd / North Project Access	-	13.8	A/B	0.41
Boones Ferry Rd / Bailey St	LOS D	17.0	A/C	0.15

Delay = Average Stopped Delay per Vehicle (sec) at Worst Movement
LOS = Level of Service of Major Street/Minor Street
V/C = Volume-to-Capacity Ratio of Worst Movement
Bold Underlined values do not meet standards.

TABLE 5: South Project Access Mitigated Future Operating Conditions (PM Peak Hour)

Traffic Control at South Project Access	Existing + Project + Mitigated		
	Delay	*LOS*	*V/C*
Signalized (Option 1)	22.0	C	0.49
Four-way Stop Control (Option 2)	20.1	C	0.75

Delay = Average Stopped Delay per Vehicle (sec) for All Movements
LOS = Level of Service of Intersection
V/C = Volume-to-Capacity Ratio of Intersection
Bold Underlined values do not meet standards.

Additional Project Oriented Transportation Mitigations

In addition to the Boones Ferry Road mitigations, the following project related measures would typically be required as conditions of approval if the project were approved:

Site Accesses

- The south Fred Meyer access on Boones Ferry Road should be aligned with the south Lowries Marketplace driveway (i.e., near Albertsons). In addition, regarding the Fred Meyer accesses on Bailey Street, the east access should be aligned with the driveway on the south side of the street and the west access should be located in a manner that it does not create conflicting turn movements with any nearby driveways on the south side of the street.
- The radius for the right-out movement at the north access on Boones Ferry Road should be designed to allow trucks to perform a right turn without encroaching on neighboring lanes.

Intersection Alignment

- Improvements to the Boones Ferry Road/Bailey Street intersection should be constructed to ensure that the east and west legs of Bailey Street are properly aligned (these legs currently are offset).

Sight Distance

- All proposed site driveways should meet American Association of State Highway and Transportation Officials (AASHTO) sight distance requirements[3], and prior to occupancy, sight distance at the access points will need to be verified, documented, and stamped by a registered professional Civil or Traffic Engineer licensed in the State of Oregon.
- The sight triangle at each driveway should be clear of objects (large signs, landscaping, parked cars, etc.) that could potentially limit vehicle sight distance.

Boones Ferry Road Adjustments

- The Fred Meyer development site frontage will require adjustments to accommodate the increased cross-section on Boones Ferry Road (as shown in Figure 5, which is found in Chapter 3: Impact Analysis). Adjustments at the southwest corner of the site may also be needed to ensure that the east and west legs of the Boones Ferry Road/Bailey Street intersection are properly aligned (currently, these legs are offset). Because the site plan does not show the curb locations on the west side of Boones Ferry Road or south side of Bailey Street, it is not clear what exact adjustments are needed.

Internal Circulation

- Site plan changes are recommended to convert the south access into the main access. One optional method for making the conversion is presented in Figure 8 (found in Chapter 5: Site Evaluation), which shows two conceptual changes: (1) realigning the internal roadways so that priority is given to vehicles coming and going to the south access and (2) installing four-way stop-control at the internal intersection near the south access.
- The site plan is not clear in the vicinity of the buildings, but it appears that the site would provide adequate pedestrian circulation. It should be ensured that the site indeed provides pedestrian access to the buildings and to the nearby crosswalks and paths (in particular, to the paths on the north side of the site that connect to Wilsonville Road).
- All sidewalks within the site should conform to ADA requirements.[4]

[3] *Geometric Design of Highways and Streets,* AASHTO, 2004; Case B1, p. 661.
[4] *ADA Accessibility Guidelines for Buildings and Facilities,* Department of Justice, January 1998.

Traffic Signal Warrants

- Though signal warrants are not met at any unsignalized study intersection for the "Existing plus Project plus Stage II" scenario, it was determined that the peak hour warrant will be met in the near future at the south Fred Meyer access; therefore, a traffic signal should be installed in conjunction with the Fred Meyer development. This will assure continuity between the Boones Ferry Road improvements and the traffic signal construction. The signal should be coordinated with the Boones Ferry Road/Wilsonville Road signal. To enable the coordination, interconnect conduit and cable will need to be installed between the signals.

Parking

- The proposed site provides only 885 parking stalls. This is not sufficient to meet City of Wilsonville code requirements, which specifies that a minimum of 962 stalls should be provided (based on the types of uses and the total building square footage of each use). During peak parking periods (such as holiday shopping periods), not meeting code requirements may cause parking demand to exceed the number of available stalls and oblige vehicles to park in adjacent commercial and/or residential areas; therefore, either 962 parking stalls should be provided to reduce potential off site parking impacts or a parking management plan should be prepared outlining how peak parking demand needs shall be met.
- The 138 bicycle parking spaces meet City code requirements and should be distributed throughout the development and should be located near building entrances in order to provide convenient access to each building.

PFB15.	Sidewalks and pedestrian linkages shall be in compliance with the ADA Accessibility Guidelines (ADAAG), as amended in 2004, and the 2005 Draft Public Rights-of-Way Accessibility Guidelines.
PFB16.	Prior to the City issuing a construction permit, the applicant shall submit the sanitary sewer construction plans to the Department of Environmental Quality for review and approval.
PFB17.	No surcharging of sanitary or storm water manholes is allowed.
PFB18.	The project shall connect to an existing manhole or install a manhole at each connection point to the public storm system and sanitary sewer system.
PFB19.	A City approved energy dissipation device shall be installed at all proposed storm system outfalls. Storm outfall facilities shall be designed and constructed in conformance with the Public Works Standards.
PFB20.	The applicant shall provide a 'stamped' engineering plan and supporting information that shows the proposed street light locations meet the appropriate AASHTO lighting standards for all proposed streets and pedestrian alleyways.
PFB21.	All required pavement markings, in conformance with the Transportation Systems Plan and the Bike and Pedestrian Master Plan, shall be completed in conjunction with any conditioned street improvements.
PFB22.	The proposed site plan and landscape plan shall depict adequate sight distance at all project driveways. The applicant shall maintain all landscaping to ensure that it does not interfere with adequate sight distance requirements at any project driveway.
PFB23.	Access requirements, including sight distance, shall conform to the City's Transportation Systems Plan (TSP) and be approved by the City Engineer.
PFB24.	Applicant shall design interior streets and aisles to meet specifications of Tualatin Valley Fire & Rescue, Allied Waste Management (United Disposal) and South Metro Area Regional Transit (SMART) for access and use of their vehicles.
Specific Comments:	
PFB25.	At the request of Staff, DKS Associates completed a Transportation Impact Study (TIS) dated November 22, 2004. This study looked at a 166,887 s.f. Fred Meyer store with additional 9,000 s.f. of retail pads and a 6,000 s.f. restaurant; total proposed development of 182,000 s.f.. At the request of staff, a new TIS was completed by DKS dated August 19, 2008. This new study looked at a 165,981 s.f. Fred Meyer building with an additional 51,879 s.f. of retail/office pads, a 3,316 s.f. restaurant and 60 residential apartment units; total proposed development of 221,176 s.f. plus 60 residential apartments. The applicant's traffic consultant has suggested a different methodology for calculating trips. Pursuant to the DKS study, the project is estimated to generate the following traffic impacts. Estimated Weekday PM Peak Hour Trips 1,255 Estimated Weekday PM Peak Hour Trips 768 Through Wilsonville Road Interchange Area Allowing for grandfathered trips from U.S. Bank and the demolished gas station, as well as accounting for pass-by trips and internal trips, the project is hereby limited to no more than the following impacts. Estimated Net New Weekday PM Peak Hour Trips 728 Estimated Weekday Net New PM Peak Hour Trips 612 Through Wilsonville Road Interchange Area
PFB26.	Applicant shall dedicate to the City sufficient rights-of-way along frontage on Boones Ferry Road to allow construction of the roadway sections as shown in Figure 5 of the DKS TIS

	report and from material submitted by the Old Town Square development team, specifically: From Wilsonville Road to north access driveway: 5-lane section (12-ft travel lanes and 14-ft northbound left turn lane with minimum 5-ft landscape median/pedestrian refuge) with two 5-ft bike lanes and on east side from back of rainwater flow-through planter a minimum 10-ft sidewalk/landscape area. From north access driveway to south access driveway: 4-lane section (12-ft travel lanes and 14-ft southbound left turn lane with minimum 5-ft landscape median/pedestrian refuge), with two 5-ft bike lanes, and on east side from back of rainwater flow-through planter a minimum 10-ft sidewalk/landscape area. From south access driveway to Bailey Street: 3-lane section (12-foot travel lanes with 14-ft northbound and southbound left turn lanes with minimum 5-ft landscape median/ pedestrian refuge), with two 5-ft bike lanes, and on east side from back of curb a 10-ft sidewalk/landscape area.
PFB27.	Applicant shall dedicate to ODOT/City of Wilsonville sufficient rights-of-way along frontage on Wilsonville Road to allow construction of a second westbound 14-ft left turn lane and a third eastbound 12-ft travel lane, and from back of curb a 12-ft wide sidewalk/landscape area.
PFB28.	Applicant shall dedicate to the City sufficient rights-of-way along frontage on Bailey Street to allow construction of the roadway section as shown in material submitted by the Old Town Square development team and from back of curb a 5-ft wide sidewalk area.
PFB29.	On Bailey Street, left turn pockets shall meet recommended lengths as determined by DKS Associates and approved by the City. Center lane areas not required for queue lengths shall be constructed as landscape medians.
PFB30.	Applicant shall provide sufficient PUE to allow the franchise utilities to construct necessary improvements, including installation of vaults, peds, conduit, and/or other facilities needed. Applicant shall coordinate on-site landscaping and pedestrian areas to incorporate the franchise utility improvements. The City will allow PGE to have conduit and cable in the easternmost 4 feet of the proposed Boones Ferry Road right-of-way.
PFB31.	Access to public rights-of-way shall be limited to the two proposed driveways on Boones Ferry Road and the two proposed driveways on Bailey Street. Proposed southern access driveway to Boones Ferry Road shall align centerlines with driveway on opposite side of roadway. Proposed eastern driveway to Bailey Street shall align centerlines with driveway on opposite side of the roadway.
PFB32.	The northern access driveway to Boones Ferry Road shall be limited to right-in / right out traffic movement only. The other three proposed driveways are allowed to have full turning access.
PFB33.	Applicant shall place adequate signage at the north and south access driveways on Boones Ferry Road to indicate the truck turning movements and prohibited movements as shown on submitted material.
PFB34.	The northern access driveway to Boones Ferry Road shall be designed with a sufficient radius to allow egress by WB65 trucks with limited impact on the middle travel lane and no impact on adjacent pedestrian sidewalks.
PFB35.	At the eastern access driveway to Bailey Street, material submitted indicates ingress turning movements for WB-65 trucks and buses are made from the through travel lane and not the left turn lane, and even so the movements are shown to conflict with the egress left turn lane. Applicant shall redesign this entrance so as to eliminate these conflicts and turning movements are made in a legal manner consistent with the Oregon Vehicular Code.

Airport Master Plan Update

Aurora State Airport

WHPacific
OREGON DEPARTMENT OF AVIATION

Aurora State Airport Master Plan

Planning Advisory Committee (PAC) Meeting #4

March 10, 2011
North Marion Intermediate School, Aurora, OR

MEETING SUMMARY

Attendees

Oregon Department of Aviation (ODA) – Chris Cummings, Sandra Larsen and Mitch Swecker (also a PAC member)

WHPacific – Rainse Anderson, Sara Funk, Sarah Lucas and Casey Storey

JLA Public Involvement – Vaughn Brown, Adrienne Dedona and Sylvia Ciborowski

Public Advisory Committee (PAC) – Bruce Bennett, Jim Bernard, Jim Hansen, Tony Holt, Steve Hurst, Nick Kaiser, Rick Kosta, James Meirow, Ted Millar, Fred Netter, Dan Riches, Ray Phelps, Charlotte Lehan (for Jim Bernard), Craig Wilmes and Dave Waggoner.

Public Attendees – see attached sign in sheets

Welcome and Introductions

Chris Cummings, ODA, introduced himself and welcomed everyone to the meeting. He noted this meeting had the best public turnout so far.

Chris reviewed the meeting agenda, explaining there would be a presentation from WHPacific prior to breaking out into a public workshop. After the workshop, the PAC will reconvene for a discussion of the alternatives. Chris instructed participants to ask as many questions as possible during the workshop and indicated that there is also the opportunity to provide written comments.

Rainse Anderson, WHPacific, introduced himself and provided an overview of the study to date. He noted that at previous meetings he had told members several times to hold their comments until we review Chapter 5. Rainse explained that Chapter 5 and the draft alternatives is what we've been building up to. He said reviewing and discussing the draft alternatives in order to develop a preferred alternative is the most exciting and important part of the study. Rainse asked the remainder of the consultant team to introduce themselves and reminded everyone to sign in. He drew attention to the comment form and let people know this would be a helpful guide when reviewing the draft alternatives.

Rainse reviewed the agenda further and explained there would be a review of the forecast updates, traffic analysis and the draft alternatives prior to the public workshop. He also said there would be a discussion of the alternatives with the PAC, and at the end of the meeting, there will be time for public comments.

Presentation

Project Overview: Rainse reviewed the project purpose and explained that there are seven (7) chapters total in the Master Plan Update. The first four draft chapters have been completed and draft chapter 5 will be reviewed tonight. Following completion of the document, the draft will be submitted to FAA for review. This process typically takes 90 days prior to final publication. After this meeting, the project team will take the feedback received and begin developing the preferred alternative. The draft preferred alternative will include a public review and comment period. Once that is completed, the Airport Layout Plan (ALP) and the Capital Improvement Plan (CIP) will be developed. The ALP and CIP will be the topics for review and discussion at the next PAC meeting; tentatively scheduled for the end of June.

Traffic Analysis: Rainse said that at the first PAC meeting there was a discussion about vehicular traffic and since that time, the project team has done some analysis to look at traffic coming from and around the airport. He explained that this data was gathered from various available sources. ODOT traffic specialists were enlisted to conduct counts around the airport. Data was gathered at 11 of the gates in during a 1 week period to determine the average annual daily traffic (AADT) and peak hour traffic volumes. The result was 2,400 AADT. Located at the NE corner, Columbia Helicopters generates 47% of the total traffic (1,130 AADT). Rainse explained that this is not a typical Fixed Base Operator (FBO) tenant since they don't use the runway. The traffic analysis included HTS (Helicopter Transport Services), under construction on the corner of Keil and Airport Road, and projected 211 AADT once developed. On Airport Road itself, 2007 data shows that approximately 2,600 vehicles travel along the road between Ehlen and Arndt Road. Rainse mentioned that this data is somewhat low; when it is updated in 2011, it's expected to increase. The data will be updated by studies completed by Marion County later this year. Rainse went on to explain that there is a lot of pass-through traffic going to and from I-5. He added that the impact from the airport on the Boone Bridge was also analyzed and it was determined that the airport generates about 1.5% of the total traffic on the bridge. Currently the employment numbers at the airport are approximately 750 employees, which equates to 3.2 trips per employee. Once a 1.19% annual employment growth rate is applied, the total employment for 2030 is 950 employees, equating to an airport generated AADT of 3,040. Rainse added that additional data and background information on the traffic analysis can be found in the report and could be discussed further during the workshop session.

Traffic Analysis Recommendations: Rainse said that ODA will continue to work with Marion County and the City of Aurora as improvements to Airport Road are considered and the appropriate considerations will have to be made with regard to airport businesses and entrances along Airport Road. He added that it is likely that there will be sharing of the costs in the system development, similar to what HTS did with their system development, but this will need to be worked out between the entities.

Forecast Updates: Chris explained that the previous meeting scheduled for February was postponed because of incorrect forecast information that needed to be corrected. There was an error with previous information related to the number of aircraft based at the airport. To remedy the problem, ODA checked with tenants, sent someone out to physically count aircraft in hangars (if able), and thoroughly reviewed their database of registered aircraft. Chris said there are now new numbers and those numbers have gone down from the original count. He said this information was used to go back and correct other information previously developed in the report. Chris said that he is very confident with the count and the new forecast.

Sara Funk said that while they were doing revisions based on the aircraft count, they completed other revisions, such as:

- Information from the FAA's Terminal Area Forecast (published in December 2010).
- Comments received from the PAC previously were addressed
- Additional research was done related to the Airport Reference Code (ARC). The project team looked up what kind of airplanes there were that were previously reported as unknown.

Sara reviewed the past and current numbers of aircraft based at Aurora, including the new projections for 2030 (based upon a 1.58% annual average growth rate).

Year	Aircraft Type	Revised Forecast	Previous Forecast
2010 Historical	Single Engine	261	312
	Jets	23	21
	Multi-engine	40	59
	Helicopter	25	35
	Other	5	5
	Total	*354*	*432*
2030 Projection	*Total*	*464*	*566*
	Jets	47	51

Operations: Sara explained the takeoffs and landings changed with the based number of aircraft. This number is now estimated at 90,909 for 2010. The number was previously somewhere around 100,000. Based upon the estimated annual growth rate, the revised forecast for 2030 operations is 124,386 as compared to the previous figure of 131,312.

Sara asked the PAC if there were any questions about the traffic or forecast analysis before moving on to Chapter 5. There were no questions from the PAC.

Draft Chapter 5

Sara said that the runway length surveys have been updated to reflect at least 500 constrained annual operations, which justifies a longer runway based on the FAA criteria. Besides the additional completed surveys sent to the PAC prior to the meeting, additional surveys have been received.

Tony Holt asked about the updated survey and requested to talk about it further later.

Bruce Bennett noted that Management West is still at Aurora, although the constrained jet aircraft owned by Management West is not.

Sara explained that three build alternatives have been proposed in order to meet the facility requirements.

Sarah Lucas explained that the preferred alternative would be developed based upon the elements included in the three build alternatives and the no-build alternative and the preferred alternative would be the basis for the ALP. She explained that the various elements outlined in the comment form could be mixed and matched to develop the preferred alternative.
Sarah explained the various comparative elements within the alternatives:

- Airport Reference Code (ARC)
- Runway length and strength
- Instrument approach capability
- Hangar/tiedown locations
- Cargo apron location
- Fuel tank location
- Air traffic control tower (ATCT)
- Aurora Rural Fire Protection District Facility

Approximately 40 developable acres are needed to meet the forecasted demand for the activity at Aurora. Currently ODA has about 9 acres of developable land. Development necessary for precision approach path indicators, a cargo apron, helicopter parking, vehicle parking and some additional hangars would be built on state-owned property. In all of the build alternatives, the adjacent church camp property (16 acres) is shown to be suitable for hangars and related development.

- *No-build Alternative:* The no-build alternative is ARC B-II. An air traffic control tower (ATCT) will still be constructed in this option, but a location has not yet been identified. The runway length would remain at its current length of (5,004 feet). Instrument approach capability does not change. The approach criteria minimums remain not lower than 1 statute mile. (The Runway Protection Zone (RPZ) at the end of each runway correlates to the approach minima). The pavement strength would remain the same (45,000 pounds dual-wheel gear).
  While the no-build alternative is essentially a do nothing option, it does not mean that there would be no financial impact to the airport. Most prominently, there would still be a cost associated with maintaining the current pavement and facilities.

- *Build Alternative 1:* – Alternative 1 is also ARC B-II and includes a 600 foot runway extension. The southern RPZ would extend south of Keil Road and an aviation easement would be sought. The northern RPZ would encroach into Columbia helicopters. The majority of state-owned property would be developed as hangars in this option. The state has identified three various alternatives for the location of the air traffic control tower. This alternative includes a fire station facility near the control tower. The air traffic control tower would be located midfield on the east side. Two helipads would also be built on public property. No cargo apron is included in this build alternative. Instrument approach capability does not change although the visual glide slope indicators would be upgraded to precision approach path indicators. The pavement would be strengthened to 60,000 pounds (dual-wheel gear). The fuelling tank would be relocated to the south of Aurora Aviation.

- *Build Alternative 2* – Alternative 2 increases design standards to ARC C-II. The approach minima are greater and extend RPZs further off of airport property; requiring additional easements or land acquisition. There are further impacts to Columbia Helicopters. This alternative has a fairly equal split between development of tiedown facilities and cargo aprons. The helicopter parking pads are same as in build alternative 1. The fuel facility is located near the cargo apron, northeast of Aurora Aviation. The fire station would be located near the current water suppression system, and the air traffic control tower is located near the center of the airport. The pavement would be strengthened to 60,000 pounds (dual-wheel gear). The runway and parallel taxiway would be extended to the south by 1,000 feet, which would require the closure of Keil Road (total runway length of 6,004 feet).

- *Build Alternative 3* – Alternative 3 also increases design standards to ARC C-II and shows a precision approach. The precision approach was something a lot of pilots requested during the goals and issues identification phase. There is no runway extension included in this alternative and RPZs increase significantly. The high voltage power lines would have to be relocated or put underground. The pavement strength remains the same. The helicopter operations areas are located north of the current cargo apron. The air traffic control tower is located closer to the north end and farther from the runway than in the other two build alternatives. The Fire District's building is located east of the fire suppression system. The fuel tanks would be located at the south end of state-owned property and the cargo aprons would be centrally located on state-owned property.

Steve Hurst asked if the no build option would include an air traffic control tower. Sarah clarified that the control tower is a committed project and would be built regardless, since it's already funded.

Noise: Casey Storey explained the type of noise model used and that it looked at saturated noise vs. point in time noise. He said the model accounts for more disturbances by night time noise vs. daytime noise. Casey went on to explain that they looked at the flight paths from this year and the aircraft type and mapped where those types of aircraft will fly. The flight tracks reflect the current noise abatement flight patterns and departure procedures. Casey noted that based upon the FAA criteria, residential land use is not considered compatible within the 65 dBA (average decibel) contour. Casey reviewed the noise projections for each of the proposed alternatives:

- All 2020 alternatives have the same type of and quantity of aircraft and show an increase in noise over time.
- Build Alternative 1 shows a slight bulge/increase in noise to the north due to the expanded runway.
- Build Alternative 2 contours shift south, due to the proposed southern extension to Runway 35.
- Build Alternative 3 contours remain the same as the 2020 No Build Alternative contours, since the runway configuration would not change.

Steve Hurst asked about the maps for the noise and confirmed whether or not alternative 2 was supposed show 2010 or 2020. Casey confirmed that it should have reflected 2020 and that this was a typo.

Tony Holt asked if this assumes the traffic control tower is built. Casey replied that it did not.

Mitch Swecker added that an instrument departure would be recommended for departures as well as certain flight patterns designed to keep the aircraft away from the Charbonneau area.

Tony said that he just wanted to understand what is currently in place.

Sarah explained that there are currently noise abatement procedures in place at the airport. Instrument procedures for northward departures are expected to be approved by the FAA in the fall. These procedures are in line with the current recommended noise abatement procedures for northward departures.

Tony said that he was aware of that but many operators don't pay attention to the noise abatement procedures and he asked if other flight paths were factored into the model. Casey responded that yes, they were taken into account.

Nick Kaiser said that the decibels don't change much between the alternatives and he asked if there were things that affected that. Casey explained that there is some shift based on the type of aircraft since there will be more jets in the future.

A member of the public asked what is happening to noise abatement around Aurora. Mitch replied that they've tried to change the flight pattern to avoid flights over Aurora and planes should depart to the south around Aurora.

Bruce Bennett said that he was involved with the FAA during the time they designed the airport departures/flight pattern and that they were designed to avoid Aurora.

Rainse explained that the preferred alternative would be presented to the Oregon Aviation Board later this month and then again in April for their concurrence. Chris said that he will send information out to the public about the meetings with the State.

Nick asked about the comment period for the draft alternatives. Chris said that there will be a two week comment period prior to the presentation to the Oregon Aviation Board.

Public Workshop

Vaughn reviewed the format for the public workshop and explained there would be 45 minutes for the public and the PAC to interact with staff to ask questions and review information about the draft alternatives. He recommended that participants take a comment form in order to review information and formulate their questions and comments. Vaughn suggested that participants think about the issues that need to be identified or considered when developing the preferred alternative. He said that the group will come back together after the workshop and the feedback heard will be discussed with the PAC for 30 minutes, then there will be time for public comment. If necessary, the public comment time would be extended and each person will be given a couple of minutes to provide testimony.

After the 45 minute public workshop, Vaughn reconvened the PAC session. He said he hoped that everyone had an opportunity to ask questions and obtain information from staff and PAC members. Vaughn explained that the PAC would now have the opportunity to discuss the draft alternatives and give input on the direction for the preferred alternative.

To start off the discussion on the preferred alternatives Sylvia Ciborowski and Adrienne DeDona reported out on the group discussion during the work session related to noise impacts and the draft alternatives. The following is a summary of the comments collected on flip charts at each of the information stations:

- If the runway object free area (ROFA) extends, what will happen to the highway?
- Have you considered what this project will do to the town of Aurora? Who needs this extension?
- I'm concerned about the impact of the RPZ on off-airport properties (alternatives 2 and 3)
- There needs to be consideration for the economic feasibility. There is no way this will pencil out economically. It will result in greater revenue from gas sales, but this will never cover the huge expenditure.
- I'm concerned about the impacts/development on the best farmland in the world. This farmland is more important for the future of food production than to pave over it.
- Currently the flight plan/pattern is not followed, especially at night. Planes fly right over houses and shake the windows. Concerned about the future safety and who disciplines pilots who fly in no flight zones.
- I'm concerned about the feasibility of Alternative 3.
- Can we use the additional capacity at Salem Airport rather than expand Aurora?
- The Run-up area is too close to hangars and private property (condo association) in Alternative 2. I'm concerned about the safety of this situation and the dust flying up in the area.
- What does it take to become a C-II Airport?
- I'm concerned about what will happen to the property values of nearby homes with the noise increase.
- I'm an airport user with five planes stationed in two hangars at Aurora. I prefer Alternative 1 with the 600 foot extension and ARC C-II.
- Can alternative 1 become a C-II with all other elements remaining the same?
- I have a concern about fumes from jets on people. The wind blows fumes into residential areas.
- The no-build option is no good because it does not have a fire facility. If we have a tower, we need a fire facility.
- Since we are already a volunteer fire station in Aurora, who will pay for a new fire facility?
- Can you request a modification to standards of the ROFA (on Highway 551) from the FAA?
- Why do you need more clearance for a more precise approach?
- Has ODOT gotten onboard with road improvements, especially Keil Road?
- Use displaced thresholds as a last resort. Sarah L. explained that a displaced threshold could be done to gain runway length for takeoff. The runway could be extended, but a displaced threshold, where aircraft land, would not be placed at the end of the extended runway pavement. The runway pavement behind the threshold could be used for takeoff, but not for landing. . .
- The Tower will enforce flight patterns (to reduce noise impacts to area neighborhoods) by keeping in contact with pilots by radio.
- Three to four days a week there are early morning airplane departures at approximately 3 a.m.

- Planes should not be allowed to take off before 7 a.m.
- If the current noise/flight pattern policy isn't being followed, why would a different policy be followed?
- Where is the money/funding for the project coming from? The Runway is already long enough. Enough money has already been spent on Aurora. Aurora doesn't have a lot of constraints as compared to the Orange County Airport (CA).
- The power lines at the north end of the airport should be removed or undergrounded for community safety reasons. The expense of doing so should be shared.
- An Educational Center for children should be built at the airport as well as a mechanic school in partnership with the local community colleges. A nearby playground is also a good idea so that kids could watch the airplanes take off and land.
- The area west of highway 551 will be severely impacted if the runway is extended. Farm equipment will be forced into the busy highway, creating safety concerns. Deer Creek Mobile Home Park will have limited access due to the closure Keil Road. Highway 551 will be the only point of access.
- Helicopters fly too low and are too noisy.
- The runway extension will increase the noise impacts to Deer Creek Estates. Residents already smell jet fuel. Airplanes take off as early as 4 a.m.
- Will there be any consideration for jet fumes in any of the future alternatives?
- The impervious surfaces drain to area farmlands since adequate drainage systems do not exist.
- Who enforces the noise abatement procedures? Orange County has a good noise abatement system.
- Will future zoning be amended due to the expanded noise footprint?
- The statement in the report that indicates that NW and Charbonneau residents will not be affected (related to Environmental Justice analysis) is inaccurate. There are 141 homes in the Deer Creek neighborhood. There will be quality of life impacts to residents.
- What will be done to mitigate noise from maintenance on jet engines?
- There seems to be a high number of planes flying over the Charbonneau area when there shouldn't be (based upon recommended flight patterns/noise abatement procedures).
- Mitigation efforts done simultaneously with airport improvements will help make things better for area residents.

PAC Discussion on Alternatives:

After the report out of public comments during the work session, the PAC reconvened for further discussion on the draft alternatives. The following is a summary of their comments and recommendations for consideration when developing the preferred alternative:

- Fred Netter said that his number one concern has consistently been regarding safety. He indicated that the no-build includes the tower, but not a fire station. He said that it would be his preference to have a Fire Station facility at the Airport near Airport Road and the water suppression system. He also indicated that closing Keil Road would a safety concern due to

emergency access and farming equipment access. Fred also requested that Airport Road be improved and called for Clackamas County to assist with funding for roadway improvements.

- Charlotte Lehan said that the traffic analysis doesn't recognize Clackamas County's role in surface transportation. She explained that Clackamas County's concerns are related to the surface transportation impacts and the impacts to area agriculture (industrial development pushes agriculture out). Charlotte added that Clackamas County has been excluded from some of the planning steps in this process.
- Dave Waggoner agreed that Clackamas County should be involved in funding the airport due to the positive impact the airport has on area economic development.
- Charlotte commented that the funding for the project hasn't been addressed.
- Steve Hurst asked if increased use of GPS and other technologies could be incorporated in lieu of a need for a runway extension.
- Bruce said that in order to make take off quieter, planes/pilots must use less power. To use less power, more runway is needed. This is a typical procedure for noise abatement elsewhere.
- Tony Holt said that the Aurora Airport is constrained by three major roads and only one runway. He indicated his support for the no-build alternative.
- Bruce agreed that the airport is constrained and should 'fill-in' for development. He added that agriculture and golf courses make good neighbors to airports and that no other building development should be allowed near airports.
- Charlotte requested that the financial impact to the public should be captured somehow and that Airport Road should be part of the financial analysis.
- Nick Kaiser stated that Airport Road gets 2,600 trips a day, but is listed as a collector street. It should be listed as an arterial street and should be designed as such. He added that in Alternative 2, the RPZ goes over the Deer Creek neighborhood and highway 551; this is a safety concern.
- Fred added that development in various communities impacts the airport too.
- Steve said that the Wilsonville City Council will discuss the Airport Alternatives at an upcoming meeting and will determine a formal position within the two week comment period.
- Ted Millar said that Aurora Airport is a category 2 airport and is an important part of the National Aviation System. He added that the Airport benefits Clackamas and Washington Counties (the cities of Wilsonville and Aurora). Ted commented that from a safety and an economic development standpoint, the runway should be expanded. There is an economic opportunity and that need should be filled. He called for an additional 1,000 feet of runway and increasing the pavement thickness of the runway.
- Rick Kosta stated that National retailers can land elsewhere in Oregon (Hillsboro, Portland, and Troutdale). He went on to say that the only alternative that doesn't impact Deer Creek neighborhood is the No-build. The noise impacts to Deer Creek residents in any of the build alternatives will be over 65 dB. What mitigation can be done for Deer Creek residents?
- Mitch Swecker said that before any mitigation were to occur, actual measuring of noise exposure would likely be conducted. If impacts are shown, they may be mitigated.

- Dave said that the current situation at the airport is dangerous for run-ups and that the run-up area in alternative 2 is impractical. It's too close to hangars and one of the hangars provides space for the Emergency Operations Center. There is no run-up space allocated in alternative 3. He called for alternative 2 to be modified to allow for a run-up area that doesn't crowd the hangars.
- Bruce said a greater than ¾ statute mile (sm) approach should be required; it's safer, quieter and saves fuel. He requested the minimums be lowered with a small extension to the south.
- Tony Holt asked how many of the user surveys were based at Aurora. He added that there should be a better, more rigorous way to collect/validate this type of data.
- Dan Riches said that Columbia Helicopters has reserved land for future development, so they cannot support any type of expansion to the north. He added that Columbia Helicopters supports safety improvements and improvements to Airport Road. Dan preferred the no-build or a hybrid of the no-build alternative.
- Nick said that the 2002 noise contour showed different planes, but there is not a huge difference. There has been a larger increase in the number of aircraft.
- Fred noted that expansion of the airport may impact other businesses' future plans and suggested that monetary compensation be offered to those businesses. Dan replied stating that Columbia Helicopters monetary compensation wouldn't work in their case because they are looking for a more long-term investment.

To wrap-up the discussion on the draft alternatives and to provide direction to the project team on the development of a preferred alternative, Vaughn directed the PAC to provide their individual recommendations/feedback on the draft alternatives in a round-robin fashion. The following summarizes their feedback:

- Dave Waggoner echoed his concerns about the run-up areas.
- Nick Kaiser said that there are a lot of variables within the four alternatives, especially with regard to noise.
- Dan Riches called for the no-build option or for an extension to the south.
- Steve Hurst said that he is looking forward to hearing the public comments.
- Fred Netter commented that safety is important and a Fire Station should be part of the plan.
- Ted Millar said that the Runway should be extended in addition to the thicker pavement surface. He suggested considering a possible hybrid alternative with a displaced threshold.
- Tony Holt said the no-build is the best option and that there are other airports in the area to operators to use. He feels the expansion of Aurora is not justified.
- Bruce Bennett said lengthening and strengthening the runway are important and that the overall safety of the airport should be increased. He added that the overall noise and environmental impacts should be decreased.
- Charlotte Lehan said that Clackamas County has not yet weighed in on the project and, at this time, she supports the Fire Station and the Airport Control Tower for safety reasons.
- Rick Kosta said he supports the no-build option since there are other airports in the area.

- James Meirow said that he would like to hear from the neighbors to the south of the airport.
- Craig Wilmes said he supports the run-up areas and displaced threshold.

Overall the PAC did not come to consensus on a preference for one single preferred alternative. However, there seemed to be somewhat shared support for safety improvements such as the Fire District's facility and the Air Traffic Control Tower. The consultant team and ODA will evaluate all comments and concerns received and consider them when developing the preferred alternative.

Public Comments:

Members of the public were each given two minutes to provide oral testimony regarding the draft alternatives. Several members provided written testimony in addition to or in lieu of oral testimony. Those statements are attached to this summary as separate documents.

- John Ranken, 26715 Baker Rd: He is an Attorney and consultant representing several property owners to the south. This area comprises 75 acres of properties in the EFU zone—from Airport Road to Hwy 551. Mr. Ranken was formerly the city attorney for the City of Aurora for 13 years and has been asked to help these property owners. The thanked PAC for its manner, and the public, and Chris C. for his efforts to help him get oriented to the project. He distributed information to the PAC showing the properties to the south that would be impacted. He said that at this point, their position is that they are interested in build alternative #1 since it seems to give everyone a little something. He added that this seemed to present a compromise.
- Mike Rite, NW Aircraft: Has been involved in aviation his whole life. He said he has been very involved in airport issues. Mr. Rite added that there have not been meetings in Mulino or McMinnville about expansion because no one wants to go there. He said that people are coming to Aurora because they want to be there. He said there is not as much going to Portland. Mr. Rite added that some complaints about noise will be addressed and that tower will help airplanes not go over neighborhoods as much. He indicated he supports extending the runway because it provides additional safety and will bring in other aircraft that aren't coming in currently.
- Larry EIschen, resident of Charbonneau: Mr. Elschen said he was representing Charbonneau neighbors. He presented a petition with 260 Charbonneau names on it, and indicated it should include more signatures. Mr. Elschen read from the petition (attached).
- Ken Ivey, representing a planning organization in Clackamas County. Mr. Ivey said he has heard a lot about safety and that airplanes are coming into a marginal airport, and they are choosing to create an unsafe condition. Mr. Ivey stated that these pilots have at least four alternatives within 30-40 miles that do have the infrastructure to safely handle those planes. He stated the group he represents would vote for the no-build alternative. He stated if you want to make the airport safer, direct those planes to those airports that have the infrastructure on the ground paid for, rather than asking us to shell out more money. I live near the airport, and I don't see a noisier airport and having to pay for the highway to get there.

- Ailin Ottinger: Mr. Ottinger said the main thing we are doing is making it possible for more commercial flights outside of Aurora. As a taxpayer, I wonder do the corporations have any part in funding all of this?
- Ben Williams, resident of Aurora and President of Friends of French Prairie: (submitted attached written comments). He said he was concerned about preservation of farmland and the impact on surface transportation. He said, we support addressing the safety requirements, but we have a 20-30 year history of the domino effect. With improvements, it will only get bigger and we'll need more improvements. The airport is surrounded by EFU farmland that needs to be preserved.
- Jack Kaley: He said he has a commercial pilot license and has been flying at Aurora 30 years. He is also the director of Positive Aurora Aviation Management Group. He attended the first PAC meeting, and noted that most placed aviation safety as their top concern. He said that is my top concern, especially safety issue for helicopter landing areas. He went on to say that Aurora has stated safety provisions for helicopters. We need to properly separate helicopter and fixed wing areas. Helicopters take off from tie down areas that are designated for fixed wing areas. There are no designated helicopter landing and parking areas on state owned property. Because of ground turbulence, it is essential that helicopters be separated from fixed wing tie down locations. Mr. Kaley distributed some diagrams explaining the problem. He said the FAA has established safety circles and helicopter standards. The safety circles have a range. In his drawing, he superimposed a helicopter pad between a fixed wing. The projected increase of helicopter traffic means we need safe operations. In the interest of overall safety, we must provide for proper separation. The master plan should plan for safe helicopter operation. The vacant state owned land east of the helicopter blade renovation building should be used for locating several helicopter pads.
- Manuel Martinez: chief pilot for JHRD investments: He said that his company moved from PDX to Aurora State due to his recommendations. His company has provided $2 million in local revenue. He has safety concerns in operating in and out of Aurora Airport. He felt a tower would enhance the safety margins, and runway length is a concern. In his 15 years as pilot, he has had 8 close encounters, mostly near Aurora Airport.
- Larry Brons: professional pilot, flying primarily out of Aurora, doing professional contract flying: He said he supports the Air Traffic Control Tower for safety. The additional 600 feet of runway would make operations safer and more economically viable. He said we are coming out of recession and we should try to stimulate the economy in the local area by making the airport more viable for business.
- Bryan Mobey, representative for Deer Creek Estates: He said they have concerns about their quality of life. He stated now with noise and the smell of fumes from jets, it affects us drastically. They cannot sit on their patios without being disturbed by aircraft. He supports the Air Traffic Control Tower to keep planes out of no fly zones and the Fire Response Facility. He felt an expansion at the airport will negatively affect their property values due to noise and jet fumes. He added that planes take off at 4 or 5 in the morning and that nobody has control of the

planes. Salem tells us to get the number of the aircraft, but we can't get their numbers at night. He said he is concerned about an accident in the future.

- Annie Kirk, Aurora resident: She said she is representing her family. She said regarding undue hardships and compensation, I have not heard anything about outside of the fence compensation for Aurora and Charbonneau residents. For impacts to Airport Road, who will bear the burden for those improvements? The road is grossly unimproved now. It needs to be taken care of, but we have more to come. I am comfortable with the tower and the fire services for safety. But I'm not convinced that any of the alternatives resolve the interest of the communities outside of the fence.
- Lolita Carl, full time farmer in Marion County: She said she is on Marion County Board of Directors for the Farm Bureau. Ms. Carl said that farming is the number one industry in Marion County. She said she is worried about encroachment on farmland and economic development. Agriculture is the second industry in Oregon, and all of us eat. All of the land surrounding Aurora Airport is the most fertile in the world. Once we start a little bit of development, it just encourages more. As a tax payer, she wonders where the money is coming from to support so few.
- Ron Sterba: He shared his concern with the power lines on north end of airport and asked what happens if a plane hits them? Where does the power grid go to? Hospitals or schools? They should be relocated. He said he would like to see an education center on the airport to share with high schools and local community colleges. Would like to see a realignment of runway so the approach is over I-5 on the north and to take the approach corridor off of Charbonneau and move the runway 75 feet to west to allow for an expansion of the taxi way without removing any buildings.

Meeting Adjournment

Rainse wrapped up the meeting and reviewed the next steps for the project. The next meeting will cover the Airport Layout Plan and the Capital Improvement Plan. This meeting is tentatively scheduled for the end of June. Rainse reminded everyone that there will be a public review and comment period for the preferred alternative and that an e-mail notification will be distributed with this information. The meeting was adjourned at approximately 8:30 p.m.

Aurora State Airport Alternatives Public Meeting
Comment Summary

30 comment forms were submitted at the March 10, 2011 Aurora State Airport meeting. 59 additional comment forms were faxed, mailed or e-mailed in after the meeting. 13 people submitted a comment form via the online survey.

Additionally, several people submitted other comments beyond the comment form at the public meeting and by email after the event. These comments are attached at the end of this summary.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Instrument Approach Capability	64 No change Approach minima to remain at visual and greater than 1 statute mile (sm)	12 No change Approach minima to remain at visual and greater than 1 statute mile (sm)	16 Improved instrument approach capability. Visibility greater than ¾ statute mile (sm)	8 Improved instrument approach capability. Visibility minima lower than ¾ statute mile (sm) (precision approaches). Parallel taxiway relocated 100 feet to the east and multiple buildings removed or altered.
Airport Reference Code	65 No change Remain at ARC B-II	16 No change Remain at ARC B-II	12 Upgrade to ARC C-II	1 Upgrade to ARC C-II
Runway Length	62 No change (total runway length: 5,004')	17 600' extension to north end of runway (total runway length: 5,604')	10 1,000' extension to south end of runway, closure of Keil Rd. (total runway length:	5 No change to length. However, relocation of the parallel taxiway is necessary for
Runway Strength	69 No change - 45,000 pounds DWG	18 Strengthen to 60,000 pounds DWG	9 Strengthen to 60,000 pounds DWG	4 No change - 45,000 pounds DWG
Air Traffic Control Tower (ATCT) Location	*Has not yet been determined.*	31 ATCT located midfield on the east side.	10 ATCT centrally located within State-owned property, but north of the location in Alternative 1.	5 ATCT located closer to the north end and farther from the runway than in the other two build alternatives.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	60 No change	18 Designation of helicopter operations area in the northwest section of State-owned property.	3 Designation of helicopter operations area, situated where the fuel tanks are currently located.	4 Designation of helicopter operations area, north of the current apron.
Fuel Station Location	64 No change	13 Fuel tank relocation south of Aurora Aviation.	6 Fuel tanks relocated northeast of Aurora Aviation.	9 Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	34 No change	23 Fire District's response building located near the air traffic control tower (ATCT).	35 Fire District's response building located adjacent to the water suppression system.	3 The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	66 No change	10 No change	4 Designation of a cargo apron facility, north of Aurora Aviation.	9 The cargo apron centrally located on State-owned property.

Additional comments provided on comment forms:

1) The number of air operations does not justify the lengthening of the runway. I support the no build alternative with the exception of the Aurora Rural Fire District facility. I am an elected board member of the Fire District. Aurora was never intended to be a "big jet" airport. It is too constrained both in length and width.
2) For the no build alternative, determination of the location for the ATCT is a critical addition.
3) Would like C-2, but don't think closing Keil Rd. is a good idea, increases traffic on Airport Rd. Prefer 600' extension to the north.
4) No additional growth.
5) 600' extension to begin with to the North. After a term of 5 years to help replenish funds extend an additional 600' on the South end (save Keil Rd.)
6) Roads are already over capacity!
7) Alternative 2 as depicted places a RWY 17 run-up area on Wiley Condo Association property very close to existing hangars with large operable doors. This property is not for sale and is not likely to be. Consideration should be given to an alternative that includes a 600' extension with run-up area at the North end and a 500' extension at the South end to create a 60000' runway with an upgrade to ARC C-11.

8) Representing property south of airport "P" zone south of Keil Rd. Totally approximately 75 acres.
9) Since you cut the trees down the noise is louder—trees are important to clean the air. I support the tower and fire station. NO expansion. I am very concerned about how the quality of my life will decrease because of the high noise along with the value of my property which will decrease. I live in Dear Creek Estates close to the end of the now runway and in 10 years the noise has increased greatly. Plus planes flying over our home taking a short cut to the airport.
10) The removal of the trees by the west opened up more noise. I support the no build plan, the tower and fire station.
11) I am a home owner in Aurora.
12) Why don't they do something at the airport to actually get pilots of jets to fly the pattern they are supposed to?
13) Property owner
14) Remove power lines on north end. If the power lines were hit by a plane how would the loss of power to our community. Hospitals, schools, fire police. Shared costs to relocate lines underground—Power Company, City, County, and Oregon Aviation Dept. Educational building for high school students interested in aviation, shared by community colleges and education districts; 2-story building. I have additional ideas. Email me please. (Ronald Sterba, saintesterba@msn.com)
15) Comment on Helicopter Parking Location for no build alternative: already done on whose approval?
16) Aurora is one of the most significant pieces of history in Oregon. Who benefits from a larger and busier airport? Could you consider doing something in the line of keeping the integrity of this small historic piece? It doesn't lend itself to this noisy alternative. Take an example from Vermont and keep this historic jewel as the treasure it should be.
17) Any/all proposed changes need to consider/mitigate the problems that will come outside "the fence" area. Such as east-west traffic and turn lanes, drainage issues, sewer and water supplies up to code, noise and vectoring of air traffic. If the above concerns are not met there will be many irate and vindictive neighbors to deal with going forward. Not a good situation! Given present and mean time future economic situation, we are better to not overbuild especially your way for the very few – the number of operations is still highly questionable! Use your new tower to get accurate numbers prior to any further changes. Runway lengthening and Build options 2 and 3 are not warranted.
18) What is tax payer liability for under improvements of Airport Rd? For the entire expansion?
    What are impacts of expansion on adjacent properties? Zoning? Usages?
    What is the number of regular operators that live in Clackamas or Marion County?
    What will be done prior to expansion mobilization to ensure City of Aurora's annexation of Airport?
    What are the wildlife and environmental impacts? When were studies completed?
19) We have hundreds of large geese in the Charbonneau area which could pose a serious threat to aircraft and civilians. I am not concerned about the lives of the geese—only the people. We have more than enough aircraft emanating from this airport now!

20) The noise level now is too high with low flying planes and helicopters who don't seem to care that people would very much appreciate a quiet neighborhood in which to find refuge. It is unfortunate that we in Clackamas County must suffer the consequences of Marion County decisions on this matter. More planes also mean more cars and trucks on our exits and entrances to the I-5 corridor which is awful right now as it is.
21) Some Charbonneau residents are curious when we see the map showing the sound pressure level (yellow line) following the exact southern boundary of Charbonneau. Also at the DOA meeting we heard SPL/Ob numbers for aircraft on this boundry to be 65 or 75 Db. Institutions such as MIT and HUD have said that the Db for flushing a toilet is 75 Db and a business office is 85 Db. I have a hard time believing that the planes going over as we dine on our patios are more quiet than a toilet or a business office.
    We have taken a straw poll of Charbonneau residents, at a recent social function and well over 95% of us are strongly opposed to the airport expansion!
22) No more noisy planes over Charbonneau!
23) It is hard for me to believe that fuel tax would pay for all the proposed changes. As a tax payer I don't want to have any part of paying for the ability to have more corporate jets landing at the Aurora Airport!
24) I have had enough as it is of planes flying over Charbonneau. I came here from Beaverton because of the rural atmosphere and less crowding. Why must it always be ruined?
25) To approve any changes is "letting the camel in the tent!" Good, bad, indifferent—the future cannot be controlled. Surely a tower and instrument approach would improve safety but that is the camel.
26) Rw 17 run-up area on Alternative 2 is not desirable to owners of Wylee property. It would add constant noise and blast to adjacent hangars. Better solution must be found, preferably adjacent to Willamette Aviation facility on runway extension to north.
27) It is my feeling that most Charbonneau residents have little sympathy for the needs and wishes of users of the Aurora Airport, because pilots presently flying in and out of the airport just don't give a shit about avoiding the airspace above Charbonneau. Improved facilities can only mean continued disregard for the neighborhood, on a larger scale.
28) Locate ATCT at mid-field west of the highway to Hubbard. This will require land acquisition but will reduce tower height with no loss of 2 acres of airport land.
    Locate the helicopter parking in the fire suppression system area. This will totally separate helicopter traffic from fixed wing, plus make room for helicopter business and hangars.
    A reasonable return on investment should always be a paramount consideration where major investment is required. I don't feel that has happened when consideration for runway strengthening or extension is being considered. To spend millions of dollars for the possibility of a very small return on investment makes no sense, especially when both the state and federal government is broke. Lets get realistic.
29) A tower and runway extension is not so good in this climate.
30) Who wrote this? Our biggest problem is people who don't have a clue about aviation write questionnaires like this. Get someone involved in aviation to help make airport programs! You are wasting our money.
31) Justify all projects by cost.

32) The noise over our house is BAD enough as it is. I certainly don't want any increase! I wish there were no Aurora Airport at all.
33) Any changes will only benefit a small handful of users of the airport, not the general public.
34) We hope that the airport is not enlarged! There is enough jet noise now over Charbonneau!
35) Larger jets = more noise
36) Runway extension – particularly north will result in heavier noisier aircraft taking off closer (& lower over) populated areas. Noise problem. Environmental problem. Safety problem. Please do not extend runways.
37) Planes are flying over Charbonneau even though they are required not to. Expansion would only increase the noise level in this area. Think of the noise level at our Portland International Airport. We don't need to push in that direction. Thanks.
38) Aircraft coming and going creates a worsening noise problem for those of us who live in Charbonneau. Making the changes sought will only make a bad problem worse!
39) I trust you will not move north. It would be too close to a population of a growing city (Wilsonville and Tualatin).
40) See submitted letter and petition from Friends of French Prairie.
41) We are concerned about the noise level from larger jets. The hundreds of geese that flock to the small lakes in Charbonneau are a hazard to the jet engines. Longer runways bring larger planes. Larger planes bring freight. Freight needs to be hauled away in big trucks. I-5 in the Wilsonville area and beyond is the most deadly in the State. We don't need more truck traffic and congestion.
42) We hate to see an increase in the airport. Already the noise and planes flying low is very unpleasant. Quality of living in a somewhat rural area is suffering from all of this. Homes to the south would really feel this with runway extensions.
43) In as much as the Charbonneau is a heavily populated area at the southern most edge of the city of Wilsonville, every effort should be taken to not degrade the environmental and living conditions of the residents while improving or, at the very least, mitigating the physical risk to person and property. To that end, I recommend the following: 1) any fuel storage should be located as far to the southern end of the airport as possible. That provides, by physical distance, the maximum protection to the populace in the case of explosion. 2) Approach capability should NOT be lowered below the current one statute mile minimum. North-to-south approaches typically pass over Charbonneau. Lowering the approach minimum directly increases the risk to the populace by reducing the vertical distance between the aircraft and the ground in case of an in-flight emergency such as mechanical failure, bird strikes, and/or wind shear. Further, the potential for increased air traffic coupled with lowering the approach minimum directly and dramatically degrades the quality of life around the airport by increasing the noise pollution associated the lower approaches. 3) Strengthening the runway only serves to allow larger, louder aircraft to access the airport. This change will result in further increasing noise pollution and dramatically increases the risk of damage to property and person in the case of an aircraft crash. 4) Helicopter operations should be located as far away from heavily populated areas as possible. This dislocation not only affords increased protection for the populace but also reduces the noise pollution associated with these aircraft types.

44) My husband and I would like our opinion on the Aurora Airport known. I have attached a copy of the survey for the airport. As you can see we have MARKED every box in the "NO Build Alternative" column. We DO NOT want and improvements done to the Aurora Airport. We would like to see the larger jets go to another airport. The noise from the jets is extremely annoying, especially when the come screaming over the house late at night. We have lived here since 1977. We know there will be change. But we DO NOT want the airport any larger or improved from how it is now. The current JETS are loud and at times too low during landing. The size of aircraft is getting too large for this location.
45) Helicopter parking location should be in south end only.
46) From 1/14/11 to present there have been 127 flights at the intersection of Miley Rd and Airport Rd that are totally out of FAA compliance, according to the flight directory rules. This intersection is 1.6 miles from the airport.
    1. Average flight inbound is 337 yards AGL (laser sighted)
    2. All aircraft are flying in an illegal pattern
    3. Noise abatement—some cases rattle windows
    4. Number of aircraft per month is 113 flights
    5. Most critical—who at the State Department did the bird counts for possible bird strikes?
    6. Four witnesses working on counting birds including AGL and direction of flight have been monitoring morning and night
    7. Flocks of over 1,000+ to as few as 25 or 30 generally fly pattern at 020 degrees to 219 degrees. These are the biggest migration pattern for these birds. These birds are directly in the fly pattern of aircraft flying over the intersection of Miley Rd and Airport Rd.
    8. The first engine out bird strike outbound is going to land in the middle of Wilsonville Shopping Center. It is a coincidence that average AGL for aircraft is 337 yards and geese are 215 to 480 yards AGL.

    With these documentations and witnesses to what may happen in the event of a major accident, who exactly are we going to sue? All flight in and out of this airport should use the FAA directory per its rules and you will find it is pretty safe flying conditions.

Comments from Online Survey

1) I have flown into and out of 3S2/ KUAO for 14 years. The demand for greater volume of aircraft is evident, and improved operational conditions would help Aurora, the local economy and the state of Oregon, whilst improving safety.
2) I have no opinion or inadequate information on other choices, what about both extensions? Why only 60,000 pounds; many business jets today push 100,000 pounds.
3) The city believes that the Airport should be allowed to grow, But it also believes that no growth should happen outside the existing boundaries of the airport until the airport is annexed into the City Of Aurora. In talking to adjacent property owners it seems they also agree with the City. Please consider our comments in your decision.
4) Before selecting the preferred alternative, comprehensive traffic and noise impact studies on surrounding communities need to be completed. The work done on these problems to date is cursory and insufficient for the size of the projects contemplated.

Additional Comments Submitted

Bernice -

Here are some of the questions that need to be addressed along with some additonal information that you will need at the meetings that you are going to attend.

1. FLOCKS OF GEESE

Since the meeting on the 12/12/10, my neighbor, Mike Farmer and I, have monitored the geese on the approach pattern from 7:30 am to 5:00 pm. In two days the average elevation was 1100'. The flocks range from 15 to more than 200 geese in the flock. We are going to keep monitoring the geese to prove how unsafe this is for the possibility of aircraft bird stikes.

2. DO THE PILOTS FLYING IN THE AIRSPACE AROUND THE AURORA AIRPORT HAVE TO ABIDE BY REGULATIONS FOR LANDING CONFIGERATIONS AND TAKE OFFS, INCLUDNG ANY ABATEMENTS OR RESTRICTIONS WHILE FLYING IN THESE PATTERNS?

3. ARE THERE ANY RESTICTIONS AROUND THE AURORA AIRPORT THAT CONCERNS SOUND ABATEMENT? WE WOULD LIKE YOU TO CLARIFY WHAT DECIBLE READING WOULD BE TOO HIGH FOR THE HOUSING AREA THAT SURROUNDS THE AURORA AIRPORT. IS THIS GOING TO BE A FAA READING OR ONE THAT YOU ARE GOING TO APPROVE ON YOUR OWN?

4. WHAT ARE THE RULES FOR ELEVATIONS FOR AIRCRAFTS AFTER CROSSING THE WILLAMETTE RIVER ON FINAL APPROACH TO AURORA AIRPORT?

5. DON'T JETS HAVE TO FOLLOW THE SAME RULES AND REGULATIONS, INCLUDING LANDING CONFIGERATIONS, AS PER THE FAA LAWS AND RULES THAT ARE
IN COMPLETE DETAIL IN THE AIRPORT DIRECTORY THAT IS USED BY ALL PILOTS?

6. WILL THERE BY ANY REGULATIONS THAT CONCERNS "CALM WIND DAYS" WITH WINDS 10 MPH OR LESS? ALL AIR TRAFFIC, IN BOUND AND OUT BOUND, SHOULD BE TAKING OFF FROM THE SOUTH ONLY. THIS WOULD EASE SOME OF THE TENSION FOR THE THOUSANDS OF PEOPLE INVOLVED TO THE NORTH.

All the questions above clearly indicate that no one is monitoring those pilots that are violating the FAA laws. When these laws are broken, will the pilots be fined or lose their license or will a new directory be written by the Aurora Airport to fit their needs?

As of 12/12/10, we have been monitoring incoming and out going aircraft, expecially their elevations (AGL). Just as a note, on 12/15/2010, Aurora Airport manager (FBO)
was notified that at 11:16 am, 11:21 am, 11:37 am and 11:46 am, the highest elevation for a DC3 was 301 yds and as low as 257 yds above Prairie View Estates. After the call, the DC3 stopped making its practice runs.

HARLAN REETZ

I do not believe citizens or local property owners benefit from the airport improvements that are going to be adopted by this master plan. I also don't believe it makes any difference if citizen's comment with disapproval, Marion County and the ODA will give the airport whatever they decide it needs or wants.

I've watched a film of a town hall meeting, concerning the master plan, from 10 years ago. Local citizens were very disapproving of all the improvements being offered. It made no difference. Marion County commissioners have allowed unrestrained growth. Now, 10 years later, the airport claims they need a tower because of safety issues, that were brought on by that unrestrained growth. In today's financial crisis, I am appalled that our federal and state governments are funding a tower. Millions of dollars could be put to much better use than to build a tower at Aurora.

I would encourage citizens to take a look at what has happened at the Hillsboro airport. The "improvements" being adopted here are designed to promote private aviation business interests such as flight training or aviation hobbyists whose comfortable lifestyle allows them to own or rent private aircraft.

I am against lengthening or strengthening the runway, the taking of farmland for hangers or the building of a tower. Attracting bigger jets or more aircraft only benefits a small minority and diminishes livability for those who live in the area. The no build option is best for the majority of citizens. The roads are already to busy and tax payers should not have to pay the cost of road and utility improvements, that only benefit a few private aviation businesses.

The Marion County Commissioners have demonstrated their support for aviation development over the environment, livable neighborhoods or protecting farmland. Clackamas County residents have not been given equal representation even though the airport expansion and development affects us as well as Marion County citizens.

The impact would be temp, but not for making large aircraft accessible. The environmental impact of a busier facility is a detriment to agriculture and to the livability of the entire area.

March 7, 2011

To: PAC of Aurora State Airport

I am concerned with increased noise and air pollution to nearby residents and potential disturbance to wildlife in the area if airport traffic is increased and more jets begin to use the airport. The small, local airport is already here, and we accept that once in a while a small jet flies in. But we are distressed that if it is opened to more and larger jets, our quality of life and property values will be diminished.

Perhaps the addition of a tower and/or runway extension would improve safety at the airport, but the increased noise levels of more jets using the airport are problematic. Jets that are really pounding to gain altitude would definitely affect noise levels. Plus, with the smaller planes that are currently using the airport there is almost no night-time traffic--I'm concerned that with more jets, we would have more noise and increased safety risk at night. I am also concerned about the possibility of more around the clock jet cargo traffic in the future.

The FAA performs extensive noise tests on hundreds of models that fly in the United States, making generalizations difficult. However, according to figures taken from FAA records, the median decibel level upon takeoff of all models of two common small jets, Learjet and Gulfstream, at 76 decibels, is somewhat higher than those of two common small propeller plane manufacturers, Piper and Cessna, at 69 decibels. Even a small increase in jet traffic would have an adverse noise impact. *(Longmont Ledger, April 23, 2010)*

Lorna Dove, who lives in Georgetown near Seattle, has devoted extensive hours toward researching and measuring chemicals like benzene and toluene, byproducts of jet fuel and plane exhaust. Dove's strongest ally has been the Agency for Toxic Substances and Disease Registry in Atlanta, which, after conducting a risk assessment of air quality in 1998, found that Georgetown residents had "a higher risk for leukemia and thyroid cancer" than the population at large. I would like to see studies of environmental impact of increased air traffic on our area. *(The Stranger, July 2, 2008)*

Our area is called French Prairie. Let's talk about the historical significance of this area and the importance of preserving it. A larger commercial airport will undermine the agricultural character and general livability of our community.

Look at CAAP (Citizens Against Airport Pollution), a community based organization that seeks to reduce pollution caused by airport operations.

July 20, 2010

Citizens Against Airport Pollution [CAAP] has filed a lawsuit against the City of San Jose because the City recently approved a major amendment to the Airport Master Plan without an Environmental Impact Report describing what adverse affect these amendments will have on the environment.

The suit alleges that the City failed to conduct the proper environmental investigation necessary prior to the approval of a major amendment to the Airport Master Plan, as required by CEQA. Air pollution impacts, noise pollution impacts and impacts on wildlife are unknown. In an effort to avoid litigation, CAAP previously requested the City to defer action approving the major amendment so that these issues could be evaluated and discussed without litigation. The City chose to ignore these concerns and approved the major amendment to the Airport Master Plan without a clear understanding of its impact on the environment.

For over 20 years, Citizens Against Airport Pollution has been the only watchdog organization committed to protecting the environment from pollution caused by Mineta San Jose International Airport. CAAP has always supported a first class airport to serve the needs of the Southbay. Protecting the quality of life for San Jose residents and maintaining a first class airport is doable. However, it requires thoughtful planning and a keen sensitivity to environmental protections. If Silicon Valley is to become the center of "green" technology, the City of San Jose must make every effort to make its airport environmentally sensitive and a good neighbor. CAAP believes that the protection of the quality of life in the neighborhoods should be the highest priority to the City of San Jose. http://www.caap.org/

I hope the ones who finally make the decision in this matter will take into consideration the appeals of their neighbors, and not jeopardize their ability to continue living comfortably in their homes. Please slow down the premature rush to expand this airport.

AOPA MAGAZINE - MAR. 2011

LOGBOOKENTRY | COMMENTARY

BY ROBERT E. BREILING
FOUNDER, ROBERT E. BREILING ASSOCIATES

Statistics that improve safety

Compiling business jet and turboprop accident statistics has been an objective of mine since the early 1960s. When I was a Navy carrier pilot and safety officer—and later a Pan Am pilot—I met an insurance executive who was concerned about insuring the new business jets and turboprops being bought by corporations. As I had some 3,000 hrt flight hours, I was retained as a consultant by the underwriter to visit and evaluate its operations. When Pan Am furloughed junior pilots, I went to work for the insurance underwriter to perform new-aircraft analyses, establish an engineering department, and supervise the company's fleet of 12 piston aircraft. There I began to compile business turbine aircraft statistics.

More than 50 percent of the bizjet accidents and incidents continue to occur in the landing phase year after year (for turboprops, it's 43 percent).

During this period I served on the NBAA board of directors, as head of its safety committee, and made numerous statistical presentations at Flight Safety Foundation's Corporate Aviation Safety Seminar, Bombardier's Safety Standdown, and others. I also worked with Donald Engen to establish the AOPA Air Safety Institute's light aircraft database.

I was then offered an opportunity to join the start-up team of SimuFlite, where one of my objectives was to secure an FAA exemption to use "advanced" simulators for training in lieu of aircraft. I showed the FAA that 52 business-jet accidents occurred during in-aircraft training from 1964 through 1980. We received the exemption, which benefitted both SimuFlite and FlightSafety International, the two training companies at the time. The accident rate began to fall (improve) so much that underwriters offered a reduced hull rate if companies trained in advanced simulators for both jets and turboprops. In 1985 we saw a need for this data by aviation insurance underwriters and corporate operators and began publishing our *Annual Business Turbine Aircraft Accident Review*, where we identified by specific aircraft the accident rates, phase of operation in which the accident occurred, causal factors, and other pertinent information.

In review of this data over the years, we found several dominant trends. For example, more than 50 percent of the bizjet accidents and incidents continue to occur in the landing phase year after year (for turboprops, it's 43 percent). Surprisingly, 76 percent of the jet accidents occur on 5,000-foot or longer runways, 10 percent on 4,000- to 5,000-foot-long runways, and 8 percent on runways shorter than 4,000 feet. Sixty-five percent were in VMC, and 24 percent were on contaminated runways. It is obvious that pilots are not adhering to positive landing techniques. They continue to land long, add a few knots to V_{REF}—which is already 30 percent above stall speed—"grease it on," delay reverser use, and use positive braking.

With respect to turboprops, accidents in the approach phase are higher with 17.6 percent occurring here, versus 7 percent in bizjets. My opinion is that many approach accidents involve single pilots, where it is apparent that the pilot gets to minimums and, being unfamiliar with the missed approach procedure, goes lower or performs an improper missed approach. I might add that single pilots have a 50-percent greater accident rate than aircraft flown by two pilots.

Single-engine turboprops, mostly flown by single pilots, are involved in a higher number of high-altitude upsets than other turboprops. It seems apparent that pilots are over-relying on the autopilot and when a malfunction occurs, loss of control follows. More instrument flight proficiency and upset training may be necessary.

Also noted over the years is that the number of reported incidents is increasing, and many result in serious damage. It is interesting to note that a turboprop can land gear up, and cause serious damage, yet this is classified as an incident—whereas a light jet can experience a gear collapse while taxiing, causing relatively light damage, and it is classified as an accident.

We believe that our annual reviews are invaluable to any bizjet or turboprop operator to aid in identifying specific aircraft problems, support the fact that short runways should not be used, and illustrate how business aviation safety compares to charter air taxi, fractionals, airline operations, single-pilot involvement, et cetera.

We publish the review annually and offer the complete study, including turbine helicopters, for $375; the jet section or turboprop section can be purchased separately for $175 each. For more see our website (www.breilinginc.com) or call us at 561-338-6900. AOPA

Subject: Comment: Aurora State Airport Master Plan

I attended the meeting earlier this month but unfortunately could not stay for the public comment portion that was begun at the end of the meeting.

One of the questions I have and I posed it to several people at the breakout session: Why is the Aurora Airport the subject of expansion when McNary Field is 20 miles away and has an existing longer runway than Aurora? Most of the responses to my questions were "convenience and closer to downtown Portland". I think that the overall public may be better served by exploring the options of McNary Field in Salem instead of embarking on this costly expansion.

If this expansion at Aurora proceeds the State of Oregon needs to impose stringent and enforced noise abatement procedures for the surrounding neighborhoods. This would mean monitoring by the control tower of violators and the imposition of fines and or license suspensions for pilots of aircraft that do not comply. To help with noise abatement the arrival/departure flight path from/to the north should be directed over the I-5 corridor and not Wilsonville.

Lastly, has an environmental impact study been conducted as to the affects of wildlife on airport operations. This area of the Willamette valley is a

large flyway for Canada geese. Wouldn't this be a safety issue?

I would appreciate your thoughts on my comments.

Rob Callan

Subject: Aurora Airport

Dear Adrienne,

Thank you for taking the time to listen to the residents concern about the proposed expansions to the Aurora airport.

I live nearby in an area that is supposed to be a "no fly" zone. It is anything but. We have planes flying over frequently and sometimes very low.
Low enough on occasion that I am concerned they are in distress and are about to crash.

An expansion would only increase these problems with the addition of increased jets and larger planes in the area and the subsequent noise issues.

It seems there are enough larger airports in the vicinity already with PDX and Hillsboro, both with greater activity and facilities than here.
Please do not turn this area into another large airport and all the noise and safety issues that would go with it.

Keep us safe and quiet!

Thank you for taking our welfare into your consideration.

A local resident and neighbor of the Aurora Airport.

Lynell Cooper-Joslin
Charbonneau

I, Kenneth W. Hawken agree with the proposal noted below. Please add my name to the petition.

Aurora Airport Master Planning Process
Petition to the Oregon Department of Aviation
from
Aurora Airport Neighbors in the Prairie View Community

Whereas, the Aurora State Airport lies less 1 1/2 miles south of the Prairie View residential community and over-flights of Prairie View are already frequent and noisy and

Whereas, the Oregon Department of Aviation is considering the possible inclusion of an extension of the existing runway and/or strengthening the runway to accommodate heavier aircraft in the current master planning process,

We, the undersigned residents of Prairie View support the petition from Charbonneau residents and express our grave concern about the number of larger jets that such an extension would bring, with the resultant increase in noise pollution for neighboring communities. We oppose such action for the following reasons:

1. At this airport, landings to the south require jets and others to fly low over dense residential areas of Wilsonville and surrounding communities. The proposed control tower, operating only during daylight hours, will not be able to fully mitigate this problem.

2. The environmental impact of a runway extension or strengthening, bringing additional and larger jet traffic, will be to reduce property values for many Wilsonville residents including those living in Charbonneau and Prairie View.

3. The extension proposed is sought by a very small number of operators, most of whom regularly use its current runway. At a time of extreme State and Federal budget difficulties it is unacceptable to consider spending large sums of taxpayer money on development to benefit so few special interests.

4. This Airport is constrained on all sides by roads and residences, by one runway, and by private infrastructure close to the taxiway and runway, all hampering long term expansion. For example, it is not practically possible, nor financially feasible, to reduce the approach minimums, something that would make the Airport a more reliable destination in bad weather. If a longer runway is required in the region this should be done at a rural area airport with many fewer constraints, such as Mulino.

For all the above reasons we request that consideration of a runway extension and/or strengthening the weight-bearing load of the runway at Aurora Airport be postponed to allow study of the most appropriate location and timing for such developments and any extension or strengthening be excluded from the current Master Plan update.

To who it may concern, we agree with the proposal below.

I agree with the proposal noted below and would like to add the following:

As a tax paying citizen, it is appalling to me that millions are going to be spent to build a tower at the Aurora Airport. It is obvious the ODA at the State of Oregon and the FAA will promote private aviation business interests over those of neighboring property owners. Marion County should not legally be allowed to expand the airport when it affects the residents of Clackamas County without equal representation. Sitting on an advisory committee outnumbered by airport business interests is not representation.

IT IS THE SPECIAL INTERESTS OF A SMALL MINORITY THAT BENEFITS BY DIMINISHING THE RIGHTS AND LIVIBILITY OF PROPERTY OWNERS.

Aurora State Airport Master Plan Update
COMMENT FORM

The chart below includes features of the no build alternative and the three build alternatives. Please indicate what features of the alternatives you prefer by checking the appropriate box.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Instrument Approach Capability	☒ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ Improved instrument approach capability. Visibility greater than ¾ statute mile (sm)	☐ Improved instrument approach capability. Visibility minima lower than ¾ statute mile (sm) (precision approaches). Parallel taxiway relocated 100 feet to the east and multiple buildings removed or altered.
Airport Reference Code	☒ No change. Remain at ARC B-II	☐ No change. Remain at ARC B-II	☐ Upgrade to ARC C-II	☐ Upgrade to ARC C-II
Runway Length	☒ No change (total runway length: 5,004')	☐ 600' extension to north end of runway (total runway length: 5,604')	☐ 1,000' extension to south end of runway, closure of Keil Rd. (total runway length: 6,004')	☐ No change to length. However, relocation of the parallel taxiway is necessary for precision approach. (total runway length: 5,004')
Runway Strength	☒ No change (45,000 pounds DWG)	☐ Strengthen to 60,000 pounds DWG	☐ Strengthen to 60,000 pounds DWG	☐ No change (45,000 pounds DWG)
Air Traffic Control Tower (ATCT) Location	*Has not yet been determined. Please select your preferred location from Alternative 1, 2 or 3.*	☒ ATCT located midfield on the east side.	☐ ATCT centrally located within State-owned property, but north of the location in Alternative 1.	☐ ATCT located closer to the north end and farther from the runway than in the other two build alternatives.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	☒ No change	☐ Designation of helicopter operations area in the northwest section of State-owned property.	☐ Designation of helicopter operations area, situated where the fuel tanks are currently located.	☐ Designation of helicopter operations area, north of the current apron.
Fuel Station Location	☒ No change	☐ Fuel tank relocation south of Aurora Aviation.	☐ Fuel tanks relocated northeast of Aurora Aviation.	☐ Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	☐ No change	☒ Fire District's response building located near the air traffic control tower (ATCT).	☐ Fire District's response building located adjacent to the water suppression system.	☐ The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments:

The Number of Air operations Does not Justify the long Hauling of the Runway
I Support the 'no Build' Alternate with the Exception of the Aurora Rural Fire District Facility - I am an Elected Board Member of the Fire District.
Aurora was never Intended to Be a 'Big Jet' Airport. It is Too Constrained Both in length & Width. GREG LEO

Aurora State Airport Master Plan Update
COMMENT FORM

The chart below includes features of the no build alternative and the three build alternatives. Please indicate what features of the alternatives you prefer by checking the appropriate box.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Instrument Approach Capability	☐ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ Improved instrument approach capability. Visibility greater than ¾ statute mile (sm)	☒ Improved instrument approach capability. Visibility minima lower than ¾ statute mile (sm) (precision approaches). Parallel taxiway relocated 100 feet to the east and multiple buildings removed or altered.
Airport Reference Code	☐ No change. Remain at ARC B-II	☐ No change. Remain at ARC B-II	☒ Upgrade to ARC C-II	☐ Upgrade to ARC C-II
Runway Length	☐ No change (total runway length: 5,004')	☒ 600' extension to north end of runway (total runway length: 5,604')	☐ 1,000' extension to south end of runway, closure of Keil Rd. (total runway length: 6,004')	☐ No change to length. However, relocation of the parallel taxiway is necessary for precision approach. (total runway length: 5,004')
Runway Strength	☐ No change (45,000 pounds DWG)	☒ Strengthen to 60,000 pounds DWG	☐ Strengthen to 60,000 pounds DWG	☐ No change (45,000 pounds DWG)
Air Traffic Control Tower (ATCT) Location	*Has not yet been determined. Please select your preferred location from Alternative 1, 2 or 3.*	☒ ATCT located midfield on the east side.	☐ ATCT centrally located within State-owned property, but north of the location in Alternative 1.	☐ ATCT located closer to the north end and farther from the runway than in the other two build alternatives.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	☒ No change	☐ Designation of helicopter operations area in the northwest section of State-owned property.	☐ Designation of helicopter operations area, situated where the fuel tanks are currently located.	☐ Designation of helicopter operations area, north of the current apron.
Fuel Station Location	☐ No change	☐ Fuel tank relocation south of Aurora Aviation.	☐ Fuel tanks relocated northeast of Aurora Aviation.	☐ Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	☐ No change	☐ Fire District's response building located near the air traffic control tower (ATCT).	☒ Fire District's response building located adjacent to the water suppression system.	☐ The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	☐ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments:

Would like C-2, but don't think closing Keil Rd a good idea, increase traffic on ~~Butteville~~ Airport Rd. Parlee 600' extension to North

Additional Comments:

ALTERNATIVE 2 AS DEPICTED PLACES A RWY 17 RUN-UP AREA ON WILEY CONDO ASSOCIATION PROPERTY VERY CLOSE TO EXISTING HANGARS WITH LARGE OPERABLE DOORS. THIS PROPERTY IS NOT FOR SALE AND IS NOT LIKELY TO BE. CONSIDERATION SHOULD BE GIVEN TO AN ALTERNATIVE THAT INCLUDES A 600' EXTENSION WITH RUN-UP AREA AT THE NORTHEND AND A 500' EXTENSION AT THE SOUTH END TO CREATE A 6000'+ RUNWAY WITH AN UPGRADE TO ARC C-II.

Aurora State Airport Master Plan Update
COMMENT FORM

The chart below includes features of the no build alternative and the three build alternatives. Please indicate what features of the alternatives you prefer by checking the appropriate box.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Instrument Approach Capability	☒ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ Improved instrument approach capability. Visibility greater than ¾ statute mile (sm)	☐ Improved instrument approach capability. Visibility minima lower than ¾ statute mile (sm) (precision approaches). Parallel taxiway relocated 100 feet to the east and multiple buildings removed or altered.
Airport Reference Code	☒ No change. Remain at ARC B-II	☐ No change. Remain at ARC B-II	☐ Upgrade to ARC C-II	☐ Upgrade to ARC C-II
Runway Length	☒ No change (total runway length: 5,004')	☐ 600' extension to north end of runway (total runway length: 5,604')	☐ 1,000' extension to south end of runway, closure of Keil Rd. (total runway length: 6,004')	☐ No change to length. However, relocation of the parallel taxiway is necessary for precision approach. (total runway length: 5,004')
Runway Strength	☒ No change (45,000 pounds DWG)	☐ Strengthen to 60,000 pounds DWG	☐ Strengthen to 60,000 pounds DWG	☐ No change (45,000 pounds DWG)
Air Traffic Control Tower (ATCT) Location	*Has not yet been determined. Please select your preferred location from Alternative 1, 2 or 3.*	☒ ATCT located midfield on the east side.	☐ ATCT centrally located within State-owned property, but north of the location in Alternative 1.	☐ ATCT located closer to the north end and farther from the runway than in the other two build alternatives.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	☐ No change	☒ Designation of helicopter operations area in the northwest section of State-owned property.	☐ Designation of helicopter operations area, situated where the fuel tanks are currently located.	☐ Designation of helicopter operations area, north of the current apron.
Fuel Station Location	☒ No change	☐ Fuel tank relocation south of Aurora Aviation.	☐ Fuel tanks relocated northeast of Aurora Aviation.	☐ Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	☐ No change	☒ Fire District's response building located near the air traffic control tower (ATCT).	☒ Fire District's response building located adjacent to the water suppression system.	☐ The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	❑ No change	❑ Designation of helicopter operations area in the northwest section of State-owned property.	❑ Designation of helicopter operations area, situated where the fuel tanks are currently located.	❑ Designation of helicopter operations area, north of the current apron.
Fuel Station Location	❑ No change	❑ Fuel tank relocation south of Aurora Aviation.	❑ Fuel tanks relocated northeast of Aurora Aviation.	❑ Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	❑ No change	❑ Fire District's response building located near the air traffic control tower (ATCT).	❑ Fire District's response building located adjacent to the water suppression system.	❑ The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	❑ No change	❑ No change	❑ Designation of a cargo apron facility, north of Aurora Aviation.	❑ The cargo apron centrally located on State-owned property.

Since you cut the trees down the noise is louder — trees important — support the tower & fire station DO EXPAND

Additional Comments:

I am very concerned about how the quality of my life will decrease because of the high noise along with the value of my property which will decrease. We live in Deer Creek Estates close to the end of the runway and in 10 years the noise has increased greatly. Please please take under consideration a short cut to Aurora

Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments:

Aurora is one of the most significant pieces of history in Ore.
Who benefits from a larger and busier airport?
Could you consider doing something in the line of keeping the integrity of this small historic piece? It doesn't lend itself to this noisy alternative. Take an example from Vermont and keep this historic jewel as the treasure it should be.

Cargo Apron Location	☒ No change	☒ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments:

Any/all proposed changes need to consider/mitigate the problems that will come outside the "fence" area. Such as E-W traffic & turn lanes / drainage issues / sewer & water supplies & up to code, Noise & vectoring of traffic (air). If the above concerns aren't met, there will be many irate and vindictive neighbors to deal with going forward. Not a good situation!

Given present and near future econ. situation - we are better to not overbuild especially runway for the very few - the numbers of operations is still highly questionable! Use your new tower to get accurate numbers prior to any B and 243 are not warranted.

Aurora State Airport Master Plan Update
COMMENT FORM

The chart below includes features of the no build alternative and the three build alternatives. Please indicate what features of the alternatives you prefer by checking the appropriate box.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Instrument Approach Capability	☒ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ Improved instrument approach capability. Visibility greater than ¾ statute mile (sm)	☐ Improved instrument approach capability. Visibility minima lower than ¾ statute mile (sm) (precision approaches). Parallel taxiway relocated 100 feet to the east and multiple buildings removed or altered.
Airport Reference Code	☒ No change. Remain at ARC B-II	☐ No change. Remain at ARC B-II	☐ Upgrade to ARC C-II	☐ Upgrade to ARC C-II
Runway Length	☒ No change (total runway length: 5,004')	☐ 600' extension to north end of runway (total runway length: 5,604')	☐ 1,000' extension to south end of runway, closure of Keil Rd. (total runway length: 6,004')	☐ No change to length. However, relocation of the parallel taxiway is necessary for precision approach. (total runway length: 5,004')
Runway Strength	☒ No change (45,000 pounds DWG)	☐ Strengthen to 60,000 pounds DWG	☐ Strengthen to 60,000 pounds DWG	☐ No change (45,000 pounds DWG)
Air Traffic Control Tower (ATCT) Location	*Has not yet been determined. Please select your preferred location from Alternative 1, 2 or 3.*	☐ ATCT located midfield on the east side.	☐ ATCT centrally located within State-owned property, but north of the location in Alternative 1.	☐ ATCT located closer to the north end and farther from the runway than in the other two build alternatives.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	☒ No change	☐ Designation of helicopter operations area in the northwest section of State-owned property.	☐ Designation of helicopter operations area, situated where the fuel tanks are currently located.	☐ Designation of helicopter operations area, north of the current apron.
Fuel Station Location	☒ No change	☐ Fuel tank relocation south of Aurora Aviation.	☐ Fuel tanks relocated northeast of Aurora Aviation.	☐ Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	☒ No change	☒ Fire District's response building located near the air traffic control tower (ATCT).	☐ Fire District's response building located adjacent to the water suppression system.	☐ The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments:

WE HAVE HUNDREDS OF LARGE GEESE IN THE CHARBONNEAU AREA WHICH COULD POSE A SERIOUS THREAT TO AIRCRAFT AND CIVILIANS. I AM NOT CONCERNED ABOUT THE LIVES OF THE GEESE – ONLY THE PEOPLE. WE HAVE MORE THAN ENOUGH AIRCRAFT EMINATING FROM THIS AIRPORT NOW.

Additional Comments:

I have had enough as it is of planes flying over Charbonneau. I came here from Beaverton because of the rural atmosphere and less crowding. Why must it always be ruined?

Additional Comments:

It is hard for me to believe that fuel tax would pay for all the proposed changes. As a tax payer I don't want to have any part of paying for the ability to have more coperate jets landing at the Aurora Airport!

Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments: Some Charbonneau residents are curious when we see the map showing the Sound Pressure Level (yellow line) following the exact southern boundy of Charbonneau. Also at the DOA meeting we heard SPL/Db numbers for aircraft on this boundy to be 65 or 75 Db. Institutions such as MIT and HUD have said that the Db for flushing a toilet is 75 Db and a business office is 85 Db. I have a hard time believing that the planes going over as we dine on our patios are more quiet than a toilet or a business office.

We have taken a straw poll of Charbonneau residents at a recent social function and well over 95% of us are strongly opposed to the airport expansion!

Aurora State Airport Master Plan Update
COMMENT FORM

The chart below includes features of the no build alternative and the three build alternatives. Please indicate what features of the alternatives you prefer by checking the appropriate box.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Instrument Approach Capability	☒ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ Improved instrument approach capability. Visibility greater than ¾ statute mile (sm)	☐ Improved instrument approach capability. Visibility minima lower than ¾ statute mile (sm) (precision approaches). Parallel taxiway relocated 100 feet to the east and multiple buildings removed or altered.
Airport Reference Code	☒ No change. Remain at ARC B-II	☐ No change. Remain at ARC B-II	☐ Upgrade to ARC C-II	☐ Upgrade to ARC C-II
Runway Length	☒ No change (total runway length: 5,004')	☐ 600' extension to north end of runway (total runway length: 5,604')	☐ 1,000' extension to south end of runway, closure of Keil Rd. (total runway length: 6,004')	☐ No change to length. However, relocation of the parallel taxiway is necessary for precision approach. (total runway length: 5,004')
Runway Strength	☒ No change (45,000 pounds DWG)	☐ Strengthen to 60,000 pounds DWG	☐ Strengthen to 60,000 pounds DWG	☐ No change (45,000 pounds DWG)
Air Traffic Control Tower (ATCT) Location	*Has not yet been determined. Please select your preferred location from Alternative 1, 2 or 3.*	☐ ATCT located midfield on the east side.	☐ ATCT centrally located within State-owned property, but north of the location in Alternative 1.	☐ ATCT located closer to the north end and farther from the runway than in the other two build alternatives.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	☒ No change	☐ Designation of helicopter operations area in the northwest section of State-owned property.	☐ Designation of helicopter operations area, situated where the fuel tanks are currently located.	☐ Designation of helicopter operations area, north of the current apron.
Fuel Station Location	☒ No change	☐ Fuel tank relocation south of Aurora Aviation.	☐ Fuel tanks relocated northeast of Aurora Aviation.	☐ Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	☐ No change	☐ Fire District's response building located near the air traffic control tower (ATCT).	☒ Fire District's response building located adjacent to the water suppression system.	☐ The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments:

The noise level now is too high with low flying planes and helicopters who dont seem to care that people would very much appreciate a quiet neighborhood in which to find refuge. It's unfortunate that we in Clackamas County must suffer the consequences of Marion County decisions on this matter. More planes also mean more cars + trucks on our exits and entrances to the I 5 corridor which is awful right now as it is

Cargo Apron Location	☐ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☒ The cargo apron centrally located on State-owned property.

Additional Comments:

Rw 17 runup area on Alternative 2 not desirable to owners of Wylee property. It would add constant noise & blast to adjacent hangars. Better solution must be found -- preferably adjacent to Willamette Aviation facility on runway extension to north.

Additional Comments: IT IS MY FEELING THAT MOST CHARBONNEAU RESIDENTS HAVE LITTLE SYMPATHY FOR THE NEEDS AND WISHES OF USERS OF THE AURORA AIRPORT, BECAUSE PILOTS PRESENTLY FLYING IN AND OUT OF THE AIRPORT JUST DONT GIVE A SHIT ABOUT AVOIDING THE AIRSPACE ABOVE CHARBONNEAU. IMPROVED FACILITIES CAN ONLY MEAN CONTINUED DISREGARD FOR THE NEIGHBORHOOD, ON A LARGER SCALE.

Aurora State Airport Master Plan Update
COMMENT FORM

The chart below includes features of the no build alternative and the three build alternatives. Please indicate what features of the alternatives you prefer by checking the appropriate box.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Instrument Approach Capability	☒ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ Improved instrument approach capability. Visibility greater than ¾ statute mile (sm)	☐ Improved instrument approach capability. Visibility minima lower than ¾ statute mile (sm) (precision approaches). Parallel taxiway relocated 100 feet to the east and multiple buildings removed or altered.
Airport Reference Code	☒ No change. Remain at ARC B-II	☐ No change. Remain at ARC B-II	☐ Upgrade to ARC C-II	☐ Upgrade to ARC C-II
Runway Length	☒ No change (total runway length: 5,004')	☐ 600' extension to north end of runway (total runway length: 5,604')	☐ 1,000' extension to south end of runway, closure of Keil Rd. (total runway length: 6,004')	☐ No change to length. However, relocation of the parallel taxiway is necessary for precision approach. (total runway length: 5,004')
Runway Strength	☒ No change (45,000 pounds DWG)	☐ Strengthen to 60,000 pounds DWG	☐ Strengthen to 60,000 pounds DWG	☐ No change (45,000 pounds DWG)
Air Traffic Control Tower (ATCT) Location	*Has not yet been determined. Please select your preferred location from Alternative 1, 2 or 3.*	☐ ATCT located midfield on the east side.	☐ ATCT centrally located within State-owned property, but north of the location in Alternative 1.	☐ ATCT located closer to the north end and farther from the runway than in the other two build alternatives.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	☒ No change	☐ Designation of helicopter operations area in the northwest section of State-owned property.	☐ Designation of helicopter operations area, situated where the fuel tanks are currently located.	☐ Designation of helicopter operations area, north of the current apron.
Fuel Station Location	☒ No change	☐ Fuel tank relocation south of Aurora Aviation.	☐ Fuel tanks relocated northeast of Aurora Aviation.	☐ Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	☐ No change	☐ Fire District's response building located near the air traffic control tower (ATCT).	☒ Fire District's response building located adjacent to the water suppression system.	☐ The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

LOCATE AT MID-FIELD WEST OF THE HI-WAY TO HUBBARD. WILL REQUIRE LAND ADDITION BUT WILL REDUCE TOWER HEIGHT NEED NO LOSS OF 2 ACRES OF AIRPORT LAND

59

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	☒ ~~No change~~ LOCATE IN FIRE SUPPRESION SYSTEM AREA. THIS WILL TOTALLY SEPARATE HELO TRAFFIC FROM FIXED WING PLUS MAKE ROOM FOR HELO BUSINESS & HANGAR.	☐ Designation of helicopter operations area in the northwest section of State-owned property.	☐ Designation of helicopter operations area, situated where the fuel tanks are currently located.	☐ Designation of helicopter operations area, north of the current apron.
Fuel Station Location	☒ No change	☐ Fuel tank relocation south of Aurora Aviation.	☐ Fuel tanks relocated northeast of Aurora Aviation.	☐ Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	☒ No change	☐ Fire District's response building located near the air traffic control tower (ATCT).	☐ Fire District's response building located adjacent to the water suppression system.	☐ The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments:

A REASONABLE RETURN ON INVESTMENT SHOULD ALWAYS BE A PARAMOUNT CONSIDERATION WHERE MAJOR INVESTMENT IS REQUIRED. I DONT FEEL THAT HAS HAPPENED WHEN CONSIDERATION FOR RUNWAY STRENGHENING OR EXTENSION IS BEING CONSIDERED. TO SPEND MILLIONS OF DOLLARS FOR THE POSSIBILITY OF VERY SMALL RETURN ON INVESTMENT MAKES NO SENSE, ESPECIALLY WHEN BOTH THE STATE ~~AND OR~~ FEDERAL GOVERNMENT IS BROKE. LETS GET REALISTIC.

Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments:

The noise over our house is BAD enough as it is. I certainly don't want any increase!

I wish there were no Aurora Airport at all.

Aurora State Airport Master Plan Update
COMMENT FORM

The chart below includes features of the no build alternative and the three build alternatives. Please indicate what features of the alternatives you prefer by checking the appropriate box.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Instrument Approach Capability	☐ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ Improved instrument approach capability. Visibility greater than ¾ statute mile (sm)	☒ Improved instrument approach capability. Visibility minima lower than ¾ statute mile (sm) (precision approaches). Parallel taxiway relocated 100 feet to the east and multiple buildings removed or altered.
Airport Reference Code	☒ No change. Remain at ARC B-II	☐ No change. Remain at ARC B-II	☐ Upgrade to ARC C-II	☐ Upgrade to ARC C-II
Runway Length	☒ No change (total runway length: 5,004')	☐ 600' extension to north end of runway (total runway length: 5,604')	☐ 1,000' extension to south end of runway, closure of Keil Rd. (total runway length: 6,004')	☐ No change to length. However, relocation of the parallel taxiway is necessary for precision approach. (total runway length: 5,004')
Runway Strength	☒ No change (45,000 pounds DWG)	☐ Strengthen to 60,000 pounds DWG	☐ Strengthen to 60,000 pounds DWG	☐ No change (45,000 pounds DWG)
Air Traffic Control Tower (ATCT) Location	*Has not yet been determined. Please select your preferred location from Alternative 1, 2 or 3.*	☐ ATCT located midfield on the east side.	☐ ATCT centrally located within State-owned property, but north of the location in Alternative 1.	☐ ATCT located closer to the north end and farther from the runway than in the other two build alternatives.

10 cont.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	☒ No change	☐ Designation of helicopter operations area in the northwest section of State-owned property.	☐ Designation of helicopter operations area, situated where the fuel tanks are currently located.	☐ Designation of helicopter operations area, north of the current apron.
Fuel Station Location	☒ No change	☐ Fuel tank relocation south of Aurora Aviation.	☐ Fuel tanks relocated northeast of Aurora Aviation.	☐ Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	☒ No change	☐ Fire District's response building located near the air traffic control tower (ATCT).	☐ Fire District's response building located adjacent to the water suppression system.	☐ The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments:

RUNWAY EXTENSION - PARTICULARLY TO NORTH- WILL RESULT IN HEAVIER NOISIER AIRCRAFT TAKING OFF CLOSER (& LOWER OVER) POPULATED AREAS. NOISE PROBLEM. ENVIRONMENTAL PROBLEM. SAFETY PROBLEM.

PLEASE DO NOT EXTEND RUNWAYS

Cargo Apron Location	☑ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments:

Planes are flying over Charbonneau even though they are required not to. EXPANSION would only increase the noise level in this area. THINK OF the noise level at our PORTLAND INTERNATIONAL AIRPORT. We DON'T need TO push IN that direction.

Thanks

Aurora State Airport Master Plan Update
COMMENT FORM

The chart below includes features of the no build alternative and the three build alternatives. Please indicate what features of the alternatives you prefer by checking the appropriate box.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Instrument Approach Capability	☒ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ No change. Approach minima to remain at visual and greater than 1 statute mile (sm)	☐ Improved instrument approach capability. Visibility greater than ¾ statute mile (sm)	☐ Improved instrument approach capability. Visibility minima lower than ¾ statute mile (sm) (precision approaches). Parallel taxiway relocated 100 feet to the east and multiple buildings removed or altered.
Airport Reference Code	☒ No change. Remain at ARC B-II	☐ No change. Remain at ARC B-II	☐ Upgrade to ARC C-II	☐ Upgrade to ARC C-II
Runway Length	☒ No change (total runway length: 5,004')	☐ 600' extension to north end of runway (total runway length: 5,604')	☐ 1,000' extension to south end of runway, closure of Keil Rd. (total runway length: 6,004')	☐ No change to length. However, relocation of the parallel taxiway is necessary for precision approach. (total runway length: 5,004')
Runway Strength	☒ No change (45,000 pounds DWG)	☐ Strengthen to 60,000 pounds DWG	☐ Strengthen to 60,000 pounds DWG	☐ No change (45,000 pounds DWG)
Air Traffic Control Tower (ATCT) Location	*Has not yet been determined. Please select your preferred location from Alternative 1, 2 or 3.*	☒ ATCT located midfield on the east side.	☐ ATCT centrally located within State-owned property, but north of the location in Alternative 1.	☐ ATCT located closer to the north end and farther from the runway than in the other two build alternatives.

	No Build Alternative	Alternative 1	Alternative 2	Alternative 3
Helicopter Parking Location	☒ No change	☐ Designation of helicopter operations area in the northwest section of State-owned property.	☐ Designation of helicopter operations area, situated where the fuel tanks are currently located.	☐ Designation of helicopter operations area, north of the current apron.
Fuel Station Location	☒ No change	☐ Fuel tank relocation south of Aurora Aviation.	☐ Fuel tanks relocated northeast of Aurora Aviation.	☐ Future fuel tanks located at the south end of State-owned property.
Aurora Rural Fire Protection District Location	☐ No change	☐ Fire District's response building located near the air traffic control tower (ATCT).	☒ Fire District's response building located adjacent to the water suppression system.	☐ The Fire District's response building located east of the fire suppression system.
Cargo Apron Location	☒ No change	☐ No change	☐ Designation of a cargo apron facility, north of Aurora Aviation.	☐ The cargo apron centrally located on State-owned property.

Additional Comments: We are concerned about the noise level from larger jets.
The hundreds of Geese that flock to the small lakes in Charbonneau are a hazard to the jet engines.
Longer runways bring larger planes. Larger planes bring freight. Freight needs to be hauled away in big trucks - I-5 in the Wilsonville area and beyond is the most deadly in the State. We don't need more truck traffic and congestion.

Additional Comments:

We hate to see an increase in the Airport - Already the Noise & Planes flying Low is very unpleasant. Quality of Living in A Somewhat Rural Area is suffering from All of This - Homes To The South would Really feel This with Runway Extensions

AUORA STATE AIRPORT MASTER PLAN UPDATE
COMMENT FORM ADDENMUM

Additional Comments:

In as much as the Charbonneau is a heavily populated area at the southern most edge of the city of Wilsonville, every effort should be taken to not degrade the environmental and living conditions of the residents while improving or, at the very least, mitigating the physical risk to person and property. To that end, I recommend the following:

- Any fuel storage should be located as far to the southern end of the airport as possible. This provides, by physical distance, the maximum protection to the populace in the case of explosion.
- Approach capability should NOT be lowered below the current one statute mile minimum. North-to-south approaches typically pass over Charbonneau. Lowering the approach minimum directly increases the risk to the populace by reducing the vertical distance between the aircraft and the ground in case of an in-flight emergency such as mechanical failure, bird strikes, and/or wind shear. Further, the potential for increased air traffic coupled with lowering the approach minimum directly and dramatically degrades the quality of life around the airport by increasing the noise pollution associated the lower approaches.
- Strengthening the runway only serves to allow larger, louder aircraft to access the airport. This change will result in further increasing noise pollution and dramatically increases the risk of damage to property and person in the case of an aircraft crash.
- Helicopter operations should be located as far away form heavily populated areas as possible. This dislocation not only affords increased protection for the populace but also reduces the noise pollution associated with these aircraft types.

dditional Comments:

We have lived here since 1977.
We know there will be change.
But we DO NOT want the
airport any larger or improved
from how it is now.
The current JETS are loud and at
times too low during landing.
The size of aircraft is getting too large
for this location. Deb Barnes

Subject: Aurora Airport
Attachments: scan0002.jpg; scan0003.jpg

My husband and I would like our opinion on the Aurora Airport known.

I have attached a copy of the survey for the airport. As you can see we have MARKED every box in the "NO Build Alternative" column.

We DO NOT want and improvements done to the Aurora Airport. We would like to see the larger jets go to another airport. The noise from the jets is extremely annoying, especially when the come screaming over the house late at night.

Thank you,
Deb and Bob Barnes

From 1/14/11 to present there have been 127 flights at the intersection of Miley Road and Airport Road that are totally out of FAA compliance, according to the flight directory rules. This intersection is 1.6 miles from the airport.

1. Average flight inbound is 337 yards AGL (laser sighted)
2. All aircraft are flying in an illegal pattern
3. Noise abatement – Some cases rattle windows
4. Number of aircraft per month is 113 flights
5. Most critical-who at the state dept did the bird counts for possible bird strikes?
6. Four witnesses working on counting birds including AGL and direction of flight have been monitoring morning and night
7. Flocks of over 1,000+ to as few as 25 or 30 generally fly pattern at 020 degrees to 219 degrees. These are the biggest migration pattern for these birds. These birds are directly in the fly pattern of aircraft flying over the intersection of Miley Road and Airport Road.
8. The first engine out bird strike outbound is going to land in the middle of Wilsonville Shopping Center. It is a coincidence that average AGL for aircraft is 337 yards and geese are 215 to 480 yards AGL.

With these documentations and witnesses to what may happen in the event of a major accident, who exactly are we going to sue? All flight in and out of this airport should use the FAA directory per its rules and you will find it is pretty safe flying conditions.

			Total Capital Costs with Displaced Threshold Option	**$ 20,029,000.00**	**$ 1,290,950.00**	**$ 9,079,850.00**	**$ 6,963,000.00**	**$ 2,695,200.00**
			Total Capital Costs with Runway Extension Option	**$ 24,507,000.00**	**$ 1,514,850.00**	**$ 13,333,950.00**	**$ 6,963,000.00**	**$ 2,695,200.00**

[1] *Other Funding is Connect Oregon III Grant*

[2] *ODA share for PMP is 75% of total cost*

[3] *Items 13-18 or Items 19-22 to be implemented, pending FAA determination*

[4] *If no displaced threshold project; construct R17 run-up at same time as fuel tank relocation project.*

Aurora State Airport
Proposed Capital Improvement Projects

	Project Description	Total Cost	Funding Source ODA (5%)	FAA* (95%)	Private
A	Property Acquisition (Runway 17 Displaced Threshold)	$ 102,000	$ 5,100	$ 96,900	
B	Property Acquisition (Runway 35 RPZ)	$ 2,561,000	$ 128,050	$ 2,432,950	
C	Avigation Easement Acquisition (Runway 17 RPZ)	$ 44,000	$ 2,200	$ 41,800	
D	Displace Runway 17 Threshold (800')	$ 1,980,000	$ 99,000	$ 1,881,000	
E	Runway 35 Extention (1000')	$ 3,035,000	$ 151,750	$ 2,883,250	
F	Runway 17 Runnup	$ 355,000	$ 17,750	$ 337,250	
G	Keil Road Relocation	$ 1,427,000	$ 71,350	$ 1,355,650	
H	Apron Development	$ 1,638,000	$ 81,900	$ 1,556,100	
I	Aurora RFPD Response Facility	$ 570,000	$ -	$ -	$ 570,000
J	Cargo Apron	$ 198,000	$ 9,900	$ 188,100	
K	Construct ATCT	$ 3,369,000	$ 168,450	$ 3,200,550	
L	Taxilane Development (Hangar Access)	$ 43,000	$ 2,150	$ 40,850	
M	Hangar Development	$ 2,088,000	$ -	$ -	$ 2,088,000
N	Helicopter Landing Pads	$ 11,000	$ 550	$ 10,450	
O	Install Runway 17 PAPIs	$ 65,000	$ 3,250	$ 61,750	
P	ODA Pavement Maintenance Program 2013/2016	$ 27,000	$ 20,250	$ 6,750	
Q	Runway 17-35 Strengthening Overlay	$ 2,052,000	$ 102,600	$ 1,949,400	
R	Relocate Fuel Tank	$ 89,000	$ 44,500	$ -	$ 44,500
S	Service Road	$ 1,017,000	$ 50,850	$ 966,150	
	Total	**$ 20,671,000**	**$ 959,600**	**$ 17,008,900**	**$ 2,702,500**

* Eligibility for FAA funding does not insure that funds will be available or granted for the project.
- Total costs include construction, temporary flagging and signing, construction staking, testing, engineering, administration, and contingency, as applicable.

Aurora State Airport

1: 2012 Construct ATCT1

Assumptions:

Project includes construction of Air Traffic Control Tower. Estimate includes all site work and construction of the Tower building along with Engineering and Administration.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
ATCT	1	LS	$3,369,000	$3,369,000
Total Cost				$3,369,000
Total Rounded Cost				**$3,369,000**

Aurora State Airport

3: 2013 PMP (2013)2

Assumptions:

Project includes crack sealing, AC patching, and surface sealants at various locations on the Airport. Estimate was based on 2009 ODA PMP project cost for Aurora.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Crack Sealing and AC Patching	1	LS	$10,000	$10,000
Surface Sealants	25000	SF	$0.25	$6,250
Subtotal Construction				$16,250
Mobilization	10.0%		$16,250	$1,625
Total Construction				**$17,875**

Engineering & Administration	30%		$17,875	$5,363
Contigency	20%		$17,875	$3,575
Total Cost				$26,813
Total Rounded Cost				**$27,000**

Aurora State Airport

4: 2014 Helicopter Landing Pads

Assumptions:

Project includes painting of 2 Helicopter Landing Pads near midfield.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Striping	500	SF	$10.00	$5,000
Subtotal Other Site Improvements	1	LS	$500	$500
Subtotal Construction				$5,500
Mob., Testing, Temp. Flagging, Surv & Mrkg	20%		$5,500	$1,100
Total Construction				**$6,600**

Engineering & Administration	40%		$6,600	$2,640
Contigency	15%		$6,600	$990
Total Cost				$10,230
Total Rounded Cost				**$11,000**

Aurora State Airport

6: 2014 Taxilane Development (Hangar Access)

Assumptions:

Project includes construction of Taxilanes on the east side of the parallel Taxiway near midfield to provide access to new hangar developments. Items included in the construction estimate are drainage improvements, site preparation, excavation, paving, striping, and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving and Excavation	300	SY	$59.00	$17,700
Subtotal Other Site Improvements	1	LS	$9,000	$9,000
Subtotal Construction				$26,700
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$26,700	$4,005
Total Construction				**$30,705**

Engineering & Administration	25%		$30,705	$7,676
Contigency	15%		$30,705	$4,606
Total Cost				$42,987
Total Rounded Cost				**$43,000**

5: 2014 Ramp Reconstruction - State Leased

Assumptions:

Project includes the re-construction of a state leased Apron Ramp on the east side of the parallel Taxiway, in front of the Aurora Aviation FBO. Items included in the construction estimate are drainage improvements, site preparation, excavation, paving, striping. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving and Excavation	8888.889	SY	$60.00	$533,333
Subtotal Other Site Improvements	1	LS	$80,000	$80,000
Subtotal Construction				$613,333
Mob., Testing, Temp. Flagging, Surv & M	15.0%		$613,333	$92,000
Total Construction				**$705,333**

Engineering & Administration	25%		$705,333	$176,333
Contigency	15%		$705,333	$105,800
Total Cost				$987,467
Total Rounded Cost				**$988,000**

Aurora State Airport

7: 2015 Hangar Development

Assumptions:

Project includes construction of approximately 10 Hangars totaling 44,000 square feet. Estimate includes all site work and construction of the Hangars. Project was estimated to be broken out in 3 phases.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Aircraft Hangars	14667	SF	$75	$1,100,000
Site Work	1	LS	$110,000	$110,000
Subtotal Construction				$1,210,000
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$1,210,000	$181,500
Total Construction				**$1,391,500**

Engineering & Administration	30%		$1,391,500	$417,450
Contigency	20%		$1,391,500	$278,300
Total Cost				$2,087,250
Total Rounded Cost				**$2,088,000**

Aurora State Airport

9: 2016 Environmental Assessment (Runway Improvements)

Assumptions:

Project includes Environmental Assessment for Runway 17-35 Improvements.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Runway Improvement EA	1	LS	$350,000	$350,000
Total Cost				$350,000
Total Rounded Cost				**$350,000**

Aurora State Airport

10: 2016 PMP (2016)

Assumptions:

Project includes crack sealing, AC patching, and surface sealants at various locations on the Airport. Estimate was based on 2009 ODA PMP project cost for Aurora.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Crack Sealing and AC Patching	1	LS	$10,000	$10,000
Surface Sealants	25000	SF	$0.25	$6,250
Subtotal Construction				$16,250
Mobilization	10.0%		$16,250	$1,625
Total Construction				**$17,875**

Engineering & Administration	30%		$17,875	$5,363
Contigency	20%		$17,875	$3,575
Total Cost				$26,813
Total Rounded Cost				**$27,000**

Aurora State Airport

11: 2017 Aurora RFPD Response Facility

Assumptions:

Project includes construction of a RFPD Response Facility of approximately 2,000 square feet. Estimate includes all site work and construction of the Hangars.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Aircraft Hangars	2000	SF	$150	$300,000
Site Work	1	LS	$30,000	$30,000
Subtotal Construction				$330,000
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$330,000	$49,500
Total Construction				**$379,500**

Engineering & Administration	30%		$379,500	$113,850
Contigency	20%		$379,500	$75,900
Total Cost				$569,250
Total Rounded Cost				**$570,000**

Aurora State Airport

13: 2018 Property Acquisition (R17 Displaced Threshold)

Assumptions:

OFA Property Acquisition for Runway 17 Displaced Threshold includes costs of purchasing land and negotiations.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Land Acquisition	2.2	ACRE	$25,000.00	$55,000
Property Negotiations	3	EA	$10,000	$30,000
Subtotal				**$85,000**

Engineering & Administration	5%		$85,000	$4,250
Contigency	15%		$85,000	$12,750
Total Cost				$102,000
Total Rounded Cost				**$102,000**

Aurora State Airport

14: 2018 Avigation Easement Acquisition (R17 RPZ)

Assumptions:

Avigation Easement for Runway 17 Displaced Threshold includes negotiation costs and per acre costs.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Avigation Easement	2.6	ACRE	$10,000	$26,000
Property Negotiations	1	EA	$10,000	$10,000
Subtotal				**$36,000**

Engineering & Administration	5%		$36,000	$1,800
Contigency	15%		$36,000	$5,400
Total Cost				$43,200
Total Rounded Cost				**$44,000**

Aurora State Airport

16: 2020 Displaced Threshold (R17 - 800')

Assumptions:

Project includes construction of 800 lineal feet of runway to displace Runway 17 along with 800 lineal feet of parallel Taxiway A east of the runway on the north end. Items included in the construction estimate include drainage improvements, site preparation, excavation, paving, striping, lighting, signage, and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving Section and Excavation	15126	SY	$59.00	$892,424
Runway Grooving	8889	SY	$2.00	$17,778
Runway Lighting per Length Runway	800	LF	$56.00	$44,800
Runway Striping per Length Runway	800	LF	$6.40	$5,120
Taxiway Lighting per Length Taxiway	1050	LF	$112.00	$117,600
Subtotal Other Site Improvements	1	LS	$151,712	$151,712
Subtotal Construction				$1,229,434
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$1,229,434	$184,415
Total Construction				**$1,413,849**

Engineering & Administration	25%		$1,413,849	$353,462
Contigency	15%		$1,413,849	$212,077
Total Cost				$1,979,389
Total Rounded Cost				**$1,980,000**

Aurora State Airport

17: 2020 Install Runway 17-35 PAPIs

Assumptions:

Project includes installation of a new PAPI navaid systems for Runway 17-35. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Runway 17 PAPI	1	LS	$40,000	$40,000
Runway 35 PAPI	1	LS	$40,000	$40,000
Subtotal Construction				$80,000
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$80,000	$12,000
Total Construction				**$92,000**

Engineering & Administration	25%		$92,000	$23,000
Contigency	15%		$92,000	$13,800
Total Cost				$128,800
Total Rounded Cost				**$129,000**

Aurora State Airport

18: 2020 R17 Run-Up Area

Assumptions:

Project includes construction of a Runnup Apron on the east side of the parallel Taxiway for Runway 17. Items included in the construction estimate are drainage improvements, site preparation, excavation, paving, striping, taxiway lighting and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving and Excavation	2585	SY	$59.00	$152,541
Subtotal Other Site Improvements	1	LS	$23,000	$23,000
Taxiway Lighting per Length Runway	400	LF	$112.00	$44,800
Subtotal Construction				$220,341
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$220,341	$33,051
Total Construction				**$253,392**

Engineering & Administration	25%		$253,392	$63,348
Contigency	15%		$253,392	$38,009
Total Cost				$354,749
Total Rounded Cost				**$355,000**

Aurora State Airport

19: 2018 Property Acquisition (R35 RPZ)

Assumptions:

Property Acquisition within the RPZ of the extended Runway 35. Costs include cost per acre of purchasing real property and negotiations required.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Property with Residence (14018 NE Keil Rd)	1	EA	$240,000.00	$240,000.00
Property with Residence (21860 NE Boones Ferry Rd)	1	EA	$275,000.00	$275,000.00
Property with Residence (21830 NE Boones Ferry RD)	1	EA	$130,000.00	$130,000.00
Property with Residence (21810 NE Boones Ferry RD)	1	EA	$150,000.00	$150,000.00
Relocation Assistance	4	EA	$50,000.00	$200,000.00
Land Acquisition	44.46	ACRE	$25,000.00	$1,111,500
Property Negotiations	12	EA	$10,000	$120,000
Subtotal				**$2,226,500**

Engineering & Administration	5%		$2,226,500	$111,325
Contigency	10%		$2,226,500	$222,650
Total Cost				$2,560,475
Total Rounded Cost				**$2,561,000**

Aurora State Airport

20: 2019 Keil Road Relocation

Assumptions:

Project includes relocating Keil Road where it enters the extended Runway 35 OFA and RPZ. Items included in the construction estimate are Right of Way (ROW) acquisition, drainage improvements, site preparation, excavation, paving, striping, and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving and Excavation	11333	SY	$55	$623,333
ROW Acquisition	3.9	ACRE	$20,000	$78,000
ROW Negotiations	6	EA	$10,000	$60,000
Subtotal Other Site Improvements	1	LS	$125,000	$125,000
Subtotal Construction				$886,333
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$886,333	$132,950
Total Construction				**$1,019,283**

Engineering & Administration	25%		$1,019,283	$254,821
Contigency	15%		$1,019,283	$152,893
Total Cost				$1,426,997
Total Rounded Cost				**$1,427,000**

Aurora State Airport

21: 2020 Runway Extension (R35 - 1000')

Assumptions:

Project includes construction of 1000 lineal feet of runway to extend Runway 35 along with 1000 lineal feet of parallel Taxiway east of the runway on the south end. Items included in the construction estimate include drainage improvements, site preparation, excavation, paving, striping, lighting, signage, navaid improvements, and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving Section and Excavation	18148	SY	$59.00	$1,070,706
Runway Grooving	11111	SY	$2.00	$22,222
Runway Lighting per Length Runway	6000	LF	$56.00	$336,000
Runway Striping per Length Runway	6000	LF	$6.40	$38,400
Taxiway Lighting per Length Runway	1300	LF	$112.00	$145,600
Subtotal Other Site Improvements	1	LS	$182,000	$182,000
Runway 35 PAPI	1	LS	$40,000	$40,000
Runway 35 Relocate Localizer	1	LS	$50,000	$50,000
Subtotal Construction				$1,884,928
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$1,884,928	$282,739
Total Construction				**$2,167,668**

Engineering & Administration	25%		$2,167,668	$541,917
Contigency	15%		$2,167,668	$325,150
Total Cost				$3,034,735
Total Rounded Cost				**$3,035,000**

Aurora State Airport

22: 2020 Install Runway 17 PAPIs

Assumptions:

Project includes installation of a new PAPI navaid system for Runway 17. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Runway 17 PAPI	1	LS	$40,000	$40,000
Subtotal Construction				$40,000
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$40,000	$6,000
Total Construction				**$46,000**

Engineering & Administration	25%		$46,000	$11,500
Contigency	15%		$46,000	$6,900
Total Cost				$64,400
Total Rounded Cost				**$65,000**

Aurora State Airport

23: 2019 PMP (2019)

Assumptions:

Project includes crack sealing, AC patching, and surface sealants at various locations on the Airport. Estimate was based on 2009 ODA PMP project cost for Aurora.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Crack Sealing and AC Patching	1	LS	$10,000	$10,000
Surface Sealants	25000	SF	$0.25	$6,250
Subtotal Construction				$16,250
Mobilization	10.0%		$16,250	$1,625
Total Construction				**$17,875**

Engineering & Administration	30%		$17,875	$5,363
Contigency	20%		$17,875	$3,575
Total Cost				$26,813
Total Rounded Cost				**$27,000**

Aurora State Airport

24: 2019 Taxilane Development (Hangar Access)

Assumptions:

Project includes construction of Taxilanes on the east side of the parallel Taxiway near midfield to provide access to new hangar developments. Items included in the construction estimate are drainage improvements, site preparation, excavation, paving, striping, and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving and Excavation	300	SY	$59.00	$17,700
Subtotal Other Site Improvements	1	LS	$9,000	$9,000
Subtotal Construction				$26,700
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$26,700	$4,005
Total Construction				**$30,705**

Engineering & Administration	25%		$30,705	$7,676
Contigency	15%		$30,705	$4,606
Total Cost				$42,987
Total Rounded Cost				**$43,000**

Aurora State Airport

25: 2020 R17/35 Strengthening Overlay

Assumptions:

Project includes a strength overlay of Runway 16-34 which will include a 1/2" Grind and 3" Overlay along with 2.5" transitions to Connector taxiways. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1 along with Bid results from Grants Pass Runway Rehab project.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Asphalt 1/2" Grinding	69067	SY	$2.00	$138,133
Subtotal Paving	69067	SY	$14.00	$966,933
Runway Grooving	66667	SY	$2.00	$133,333
Runway Striping per Length Runway	6000	LF	$6.40	$38,400
Subtotal Other Site Improvements	1	LS	$2,763	$2,763
Subtotal Construction				$1,279,563
Mob., Testing, Temp. Flagging, Surv & Mrkg	14.5%		$1,279,563	$185,537
Total Construction				**$1,465,099**

Engineering & Administration	25%		$1,465,099	$366,275
Contigency	15%		$1,465,099	$219,765
Total Cost				$2,051,139
Total Rounded Cost				**$2,052,000**

Aurora State Airport

27: 2021 Master Plan Update

Assumptions:

Project includes Master Plan update for Aurora State Airport

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Runway Improvement EA	1	LS	$200,000	$200,000
Total Cost				$200,000
Total Rounded Cost				**$200,000**

Aurora State Airport

26: 2021 Hangar Development

Assumptions:

Project includes construction of approximately 10 Hangars totaling 44,000 square feet. Estimate includes all site work and construction of the Hangars. Project was estimated to be broken out in 3 phases.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Aircraft Hangars	14667	SF	$75	$1,100,000
Site Work	1	LS	$110,000	$110,000
Subtotal Construction				$1,210,000
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$1,210,000	$181,500
Total Construction				**$1,391,500**

Engineering & Administration	30%		$1,391,500	$417,450
Contigency	20%		$1,391,500	$278,300
Total Cost				$2,087,250
Total Rounded Cost				**$2,088,000**

Aurora State Airport

28: PMP (2022, 2025, 2028, 2031)

Assumptions:

Project includes crack sealing, AC patching, and surface sealants at various locations on the Airport. Estimate was based on 2009 ODA PMP project cost for Aurora multiplied by 4 for each 2022, 2025, 2028, and 2031.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Crack Sealing and AC Patching	1	LS	$10,000	$10,000
Surface Sealants	25000	SF	$0.25	$6,250
Subtotal Construction				$16,250
Mobilization	10.0%		$16,250	$1,625
Total Construction				**$17,875**

Engineering & Administration	30%		$17,875	$5,363
Contigency	20%		$17,875	$3,575
Subtotal Cost Per year				$26,813
Total Rounded Cost				**$108,000**

Aurora State Airport

2: 2012 Service Road

Assumptions:

Project includes construction a service road through the airport. Estimate includes easement acquisition, drainage improvements, site preparation, excavation, paving, striping, and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving and Excavation	8400	SY	$55	$461,982
Easement Acquisitions	4	EA	$20,000	$80,000
Subtotal Other Site Improvements	1	LS	$92,000	$92,000
Subtotal Construction				$633,982
Mob., Testing, Temp. Flagging, Surv & Mrkg	14.5%		$633,982	$91,927
Total Construction				**$725,909**

Engineering & Administration	25%		$725,909	$181,477
Contigency	15%		$725,909	$108,886
Total Cost				$1,016,273
Total Rounded Cost				**$1,017,000**

Aurora State Airport

29: Apron Development

Assumptions:

Project includes construction of Aircraft Parking Aprons on the east side of the parallel Taxiway near midfield. Items included in the construction estimate are drainage improvements, site preparation, excavation, paving, striping, and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving and Excavation	15676	SY	$59.00	$924,875
Subtotal Other Site Improvements	1	LS	$92,000	$92,000
Subtotal Construction				$1,016,875
Mob., Testing, Temp. Flagging, Surv & Mrkg	15%		$1,016,875	$152,531
Total Construction				**$1,169,407**

Engineering & Administration	25%		$1,169,407	$292,352
Contigency	15%		$1,169,407	$175,411
Total Cost				$1,637,170
Total Rounded Cost				**$1,638,000**

Aurora State Airport

30: Taxilane Development (Hangar Access)

Assumptions:

Project includes construction of Taxilanes on the east side of the parallel Taxiway near midfield to provide access to new hangar developments. Items included in the construction estimate are drainage improvements, site preparation, excavation, paving, striping, and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving and Excavation	300	SY	$59.00	$17,700
Subtotal Other Site Improvements	1	LS	$9,000	$9,000
Subtotal Construction				$26,700
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$26,700	$4,005
Total Construction				**$30,705**

Engineering & Administration	25%		$30,705	$7,676
Contigency	15%		$30,705	$4,606
Total Cost				$42,987
Total Rounded Cost				**$43,000**

Aurora State Airport

31: Hangar Development

Assumptions:

Project includes construction of approximately 10 Hangars totaling 44,000 square feet. Estimate includes all site work and construction of the Hangars. Project was estimated to be broken out in 3 phases.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Aircraft Hangars	14667	SF	$75	$1,100,000
Site Work	1	LS	$110,000	$110,000
Subtotal Construction				$1,210,000
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$1,210,000	$181,500
Total Construction				**$1,391,500**

Engineering & Administration	30%		$1,391,500	$417,450
Contigency	20%		$1,391,500	$278,300
Total Cost				$2,087,250
Total Rounded Cost				**$2,088,000**

Aurora State Airport

32: Cargo Apron

Assumptions:

Project includes construction of a Cargo Apron on the east side of the parallel Taxiway near midfield. Items included in the construction estimate are drainage improvements, site preparation, excavation, paving, striping, and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving and Excavation	1889	SY	$59.00	$111,444
Subtotal Other Site Improvements	1	LS	$11,000	$11,000
Subtotal Construction				$122,444
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$122,444	$18,367
Total Construction				**$140,811**

Engineering & Administration	25%		$140,811	$35,203
Contigency	15%		$140,811	$21,122
Total Cost				$197,136
Total Rounded Cost				**$198,000**

Aurora State Airport

33: Relocate Fuel Tanks

Assumptions:

Project includes relocating fuel storage. Estimate includes new pavement approximately 50'x75' and relocating the tanks.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving new Fuel Storage pad	416.7	SY	$55.00	$22,917
Relocate Fuel Storage Tank	1	LS	$30,000.00	$30,000
Subtotal Other Site Improvements	1	LS	$2,292	$2,292
Subtotal Construction				$55,208
Mob., Testing, Temp. Flagging, Surv & Mrkg	14.5%		$55,208	$8,005
Total Construction				**$63,214**

Engineering & Administration	25%		$63,214	$15,803
Contigency	15%		$63,214	$9,482
Total Cost				$88,499
Total Rounded Cost				**$89,000**

Aurora State Airport

34: R17 Run-Up Area4

Assumptions:

Project includes construction of a Runnup Apron on the east side of the parallel Taxiway for Runway 17. Items included in the construction estimate are drainage improvements, site preparation, excavation, paving, striping, taxiway lighting and seeding. Construction unit prices and soft cost percentages were estimated starting from ODA 2009 Unit Cost Estimate for Region 1.

Cost Estimate:

Item Description	Qty	Unit	Price/Unit	Cost
Subtotal Paving and Excavation	2585	SY	$59.00	$152,541
Subtotal Other Site Improvements	1	LS	$23,000	$23,000
Taxiway Lighting per Length Runway	400	LF	$112.00	$44,800
Subtotal Construction				$220,341
Mob., Testing, Temp. Flagging, Surv & Mrkg	15.0%		$220,341	$33,051
Total Construction				**$253,392**

Engineering & Administration	25%		$253,392	$63,348
Contigency	15%		$253,392	$38,009
Total Cost				$354,749
Total Rounded Cost				**$355,000**

John E. Parnell, Noise Consultant

Shirley Hoy, Administrative Assistant
Oregon Aeronautics Division

Many others, too numerous to name, aided in developing this Plan. They included representatives of various public agencies and several individual interested citizens.

The preparation of this airport master planning project was financed in part through a planning grant from the Federal Aviation Administration, Department of Transportation, under the provisions of the Airport and Airway Development Act of 1970, (Public Law 91-258), as amended. The balance was funded by the Aeronautics Division of the Oregon Department of Transportation

The Oregon Division of Aeronautics' primary role in this project is that of airport owner and sponsor.

GLOSSARY

BT	Basic Transport, a category of airport serving BT aircraft, which are all airplanes of 12,500 to 60,000 pounds maximum gross take off weight; also includes turbojets under 12,500 pounds.
DEQ	Oregon Department of Environmental Quality
DG	Dual Gear Aircraft
EPA	Environmental Protection Agency
FAA	Federal Aviation Administration
FAR	Federal Aviation Regulation
FBO	Fixed Base Operator; FBO's provide aviation services at airports.
GA	General Aviation, includes all types of aviation except Air Carriers and Military.
GU	General Utility, a category of airport serving GU Aircraft, which are all airplanes under 12,500 pounds maximum gross take off weight.
IFR	Instrument Flight Rules; Required in controlled airspace with a visibility of less than 3 miles and/or ceilings lower than 1000 feet.
LCDC	Oregon Land Conservation and Development Commission
MALSF	Medium Intensity Approach Lighting System with sequence flashers; for use during instrument weather (IFR).
MLS	Microwave Landing System, used to provide horizontal and vertical guidance to landing aircraft during low visibility weather.
NDB	Non-directional Beacon, an electronic beacon providing directional guidance to aircraft.
NEF	Noise Exposure Forecast, used as guidance for predicting human response to aircraft noise.
OAD	Oregon Aeronautics Division, Oregon Department of Transportation.
SCS	U.S. Department of Agriculture, Soil Conservation Service
SG	Single Gear Aircraft
SMSA	Standard Metropolitan Statistical Area, a standard area used to measure, compare, and predict socio-economic trends in metropolitan areas.
TRACON	Terminal Radar Control Facility
VASI	Visual Approach Slope Indicator
VFR	Visual Flight Rules, can be used when the visibility is greater than 3 miles and the ceiling is higher than 1,000 feet.
VOR/DME	Very high frequency Omni-directional Radio range/Distance Measuring Equipment. It provides an instrument approach procedure using VORTAC.
VORTAC	Very high frequency Omni-directional Radio range with TACAN (Tactical Air Navigation Equipment).

INTRODUCTION

INTRODUCTION

Throughout recent years changing patterns of aviation activities at the Aurora State Airport have made it difficult for the Oregon Aeronautics Division to maintain a responsive program for improvement. Short term needs have been met, but there has been no long range development plan for the airport.

There have been a long series of changes in the fixed base operations at the airport. These changes and replacements have affected the services to the airport user and sometimes even the nature of the airport's traffic growth.

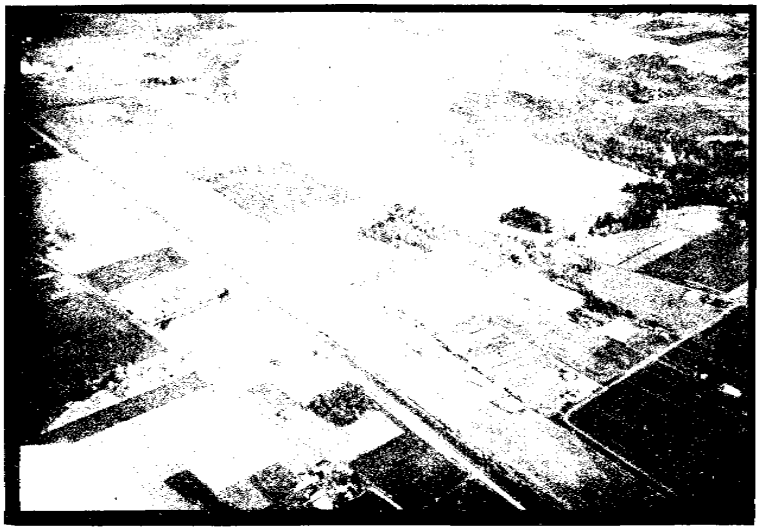
Even while airport traffic was on a steady increase there have been periodic occurrences of crisis situations for which there was little time for advance planning. Revenues to the owner, the Oregon Aeronautics Division, have fluctuated, and financial planning has been difficult for the State, which is responsible for the airport.

The airport is one of the busiest general aviation airports in Oregon. Traffic includes a full range of general aviation equipment. Aurora State Airport serves portions of several counties, both rural and urban, and a wide variety of business and private users. Figure 1 is a recent photograph of the airport.

Many of the airport's facilities require improvements appropriate to present and predicted air traffic. Also today's unprecedented emphasis on environmental compatibility and land use planning demands that the airport community and the airport owner identify airport needs and seek balanced solutions.

In May 1975 the Oregon Aeronautics Division, Department of Transportation, retained CH2M HILL as airport consultants to prepare a master plan for the Aurora State Airport.

The Aurora State Airport Master Plan was developed through the combined efforts of many participants. They included representatives from local and state governments, the Federal Aviation Administration and many private citizens representing surrounding communities and users of the airport.



AURORA STATE AIRPORT
AURORA, OREGON

FIGURE 1

It is important to note that the Master Plan is a program to anticipate public needs and to maintain compatibility with other public interests. It is not a program to stimulate growth or development.

This Master Plan provides the community at large and appropriate public agencies with a means to understand the airport's significance and to implement plans and programs related to the airport.

The Master Plan describes the kind and magnitude of development needed for aviation services and facilities and provides an orderly schedule for development through 1995. The plan also endeavors to preserve and improve the airport through economical solutions that remain compatible with regional development and responsive to community wishes.

Objectives accomplished and included in the Master Plan are:

- Preparation of an inventory of facilities and conditions and a collection of data essential to understanding the airport and its operation.
- Development of aviation forecasts and a determination of the airport's role in the airport system through 1995.
- An analysis of airport space and facilities requirements.
- Presentation of graphic depictions of recommended future development of all areas within and adjacent to the airport.
- Evaluation of the impact of future development upon the environment and the surrounding community.
- Establishment of a schedule for development by priorities and a staged improvement program with cost estimates.
- Specific recommendations for implementing the development program including a financial plan.

The Master Plan deals with a program for the future of the airport and with guidelines for compatible use of the surrounding land. Because future trends and goals may not exactly match present forecasts and current community policies, the Master Plan has built-in flexibility to adjust to changes without detracting from its overall integrity.

Following adoption of the Master Plan the goal will be to follow through with a continuous implementation program, updating the Master Plan as required. This will be the best way to maximize the airport's benefits while minimizing costs and adverse impacts. It is also the best way to insure that the airport remains a compatible neighbor.

SUMMARY

SUMMARY
FINDINGS 3
RECOMMENDATIONS 5

RECOMMENDATIONS

- This airport Master Plan should be adopted and implementation commenced immediately.
- Application should be made to the FAA for funds to support the Implementation Plan.
- The Aurora State Airport should be retained at its existing site.
- In order for the State to implement the Master Plan the State needs to control all airport land. Therefore acquisition of the land for the terminal area should be accomplished without delay.
- The existing airport dimensional criteria should be preserved even though they partially surpass usual FAA airport standards.
- The parallel taxiway and exit taxiway system must be constructed immediately. This is necessary to protect public safety and to provide adequate runway capacity.
- Obstruction removal should be accomplished as described in the Master Plan.
- Paved aircraft parking aprons should be provided in the near future.
- Improved airfield lighting should be installed in the near future.
- The airport maintenance program should be accelerated, particularly as regards runway pavement rehabilitation and airfield surface drainage improvements.
- The State should continue to work closely with Marion and Clackamas Counties to develop compatible land use planning for the airport environs.
- The State should work closely with Marion and Clackamas Counties to develop zoning changes on and near the airport as recommended by the Master Plan.
- The State Aeronautics Divison should make recommendations to the State Highway Division for improving access routes and facilities.
- The establishment of bus and/or limousine service to the airport should be encouraged.
- At this time no appropriate alternatives for airport ownership seem to exist. The State should retain ownership of the airport because its closure would have a critical adverse impact on the Oregon Aviation System.
- The State should take a more active part in the management of the entire airport and particularly give more attention to user service and problems.
- The State should develop an expanded airport management program and increase its airport staff as necessary to administer the airport operation and development program.
- The State's financial policy should be to make the airport more self-supporting. This should be accomplished by obtaining more direct control of the sources of airport revenues. Revenues should be increased in accordance with area competition and inflation rates. Lease rates should be reviewed frequently and revised to maintain consonance with general economic conditions.
- Airport traffic surveys should be made periodically and incorporated into the Master Plan and the Oregon Aviation System Plan.
- A program to collect weather data should be initiated and used for facility planning.
- The State should schedule periodic reviews of the Master Plan. It should be revised whenever necessary to keep it current.
- In updating the Master Plan the State should work closely with the airport users, local governments, and citizens. A flexible attitude and approach to the planning process should be maintained.
- Also it is important to keep the public and public agencies informed as to what impacts off-airport plans may impose on this public facility.

SUMMARY

FINDINGS

- No formal long-range Plan has ever been accomplished for the Aurora State Airport.
- The lack of a Master Plan makes long-range financial planning difficult or nearly impossible because there can be no budget targets for improvements.
- The Aurora State Airport serves a large service area, including several counties. The airport's sphere of influence is regional in magnitude, and the airport can be considered to be part of a regional system of airports for the greater Portland area.
- Surface access to the airport is poor from Marion County, but it is mostly adequate from other counties north of the airport.
- The airport needs maintenance of existing private and public facilities. Pavement and drainage are key items.
- The airport is built to standards exceeding minimum FAA requirements and often surpassing maximum FAA criteria.
- The lack of a parallel taxiway is a serious problem both for safety and for airfield capacity.
- Improvements to airport facilities are not keeping pace with increases in air traffic levels.
- There is no on-site airport management to enforce airport operational safety regulations on a uniform basis.
- Aircraft parking areas are in very poor condition and their use is limited by weather and soil conditions.
- The airport has no central focal point, and no main entrance. This is confusing to transient pilots and visitors who are seeking a main terminal area.
- The airport is owned in two parts. The runway area is owned by the Oregon Aeronautics Division and is basically a paved flight strip. All revenue producing areas of the airport are owned by private interests, who are under no specific obligation to guarantee minimum levels of service to the public.
- Multiple ownership of separate parts of the airport make master planning and policy development impossible to implement through any comprehensive program or Master Plan.
- The Aurora State Airport has inadequate recognition by public comprehensive plans and by zoning ordinances. Land use planners must be provided with information regarding aviation trends.
- Although the airport use is now compatible with adjacent land use, the surrounding area has potential for growth. Therefore the airport needs to be guaranteed protection from encroachment throughout the long-range future.
- The current zoning of the airport, Public Amusement (PA), is inappropriate. Zoning adjacent to the airport, Residential-Agricultural (RA), is at least partially potentially incompatible with the airport. Proposed rezoning to Exclusive Farm Use (EFU) would be very compatible.
- The Master Plan forecasts significant increases in general aviation traffic. Master Plan forecasts for 1995 show 248 based aircraft, 209,000 annual operations, 115 operations during the busy hour.
- By 1995 eight percent of the aircraft are predicted to be multi-engine propeller aircraft and three percent will be turbojet aircraft. The airport will be serving a population of over one million people. Forecasts show a need for an air traffic control tower, a crash/ fire/rescue station, a terminal building, and full time supervision by an airport manager. No airline traffic is predicted for the future.
- The airport's current role is General Utility, but this is forecast to change to Basic Transport as more corporate types and turbojet aircraft use the airport by the mid-1980's. The specific year when actual activity will indicate the role to be Basic Transport will partially depend upon the airport development program of the Port of Portland and upon urban growth from Portland southward toward Aurora.
- The existing airport site properly protected by land use planning, is adequate to accommodate the 20-year forecast needs of the Aurora State Airport.
- A proposed new airport in the southeast Portland area would affect Aurora State Airport slightly by absorbing a small portion of the aviation demand and slowing the growth of the airport, but the effects would not be significant.
- Two serious capacity problems limit the airport at this time. There is a runway capacity problem because of the lack of a parallel taxiway and there is a parking problem, particularly during wet weather, because of the lack of paved public apron space.

- The airport does not presently provide sufficient public service facilities.
- Employment on the airport is increasing. Between 100 and 125 persons are directly employed on the airport. Their direct plus indirect salary impact is estimated to approach $1,000,000 annually, and the economic impact of the airport is on the increase.
- Eventually the airport will require a longer runway to accommodate more complex aircraft forecast in the future, but the need for a second runway is not apparent throughout the 20-year study period.
- IFR approach procedures for the airport are unsatisfactory. Minima are poor and the requirement for DME equipment in the aircraft is limiting.
- The airport has no on-site navaids. Additional electronic and visual navaids are required.
- The Master Plan has developed a schedule of projects by priority necessary to develop the airport. They are contained in the Plan.
- For extensive terminal area development soil and drainage conditions may dictate the use or installation of central waste treatment facilities.
- The impacts caused by the operation of the airport upon the surrounding environment are light and can remain light if compatible land use planning is accomplished. This is described in the Master Plan.
- The Master Plan presents a three-stage 20-year capital development program. Total estimated costs including private and Federal investments are about $3.3 million in 1976 dollars.
- The capital development program can be carried out with a State of Oregon share of $767,000 for the 20-year period based on the current Federal participation basis.
- Currently the revenue produced by the airport is inadequate to support development to meet forecast aviation demand levels. Under this Airport Master Plan the State's revenue could be developed to support the program recommended by the Master Plan.
- Complexities of airport operational management under a two part ownership, (i.e., State and private), will increase as air traffic levels and levels of competition of private interests increase.
- As traffic levels increase and activities become more complex the present staffing level of the Airport Branch of the State Aeronautics Division is not adequate to properly manage the operation and development of the airport.
- Although the Oregon Aviation System Plan has recommended transfer of the airport to a unit of local government, no such agency appears to be available. State ownership of all airport property and management by the State appears to be the only viable alternative for successful operation and development of the Aurora State Airport.

History

The Aurora State Airport is a public airport owned and operated by the Oregon Aeronautics Division. The airport was constructed in 1943 by the State Highway Department to provide an emergency alternate field for air carrier aircraft. Thus, the airport has been in operation as an airport for approximately 33 years, although it has not and does not serve air carrier aircraft.

The airport has had a varied history. It has served military aircraft, crop dusters, gliders, as well as the full range of general aviation aircraft. Aurora State Airport began as a Federal Flight Strip Project. In the early years until 1953 the Bureau of Public Roads (BPR) administered the airport. In 1946 the Civil Aeronautics Administration included the Aurora Flight Strip in the National Airport Plan (now National Airport System Plan) where it has remained.

Legislation was passed in 1947 to permit the Board of Aeronautics (now Division of Aeronautics) to own and operate state airports, and in 1953 the Board signed a lease agreement with BPR to maintain and operate the airport. In 1973 the State Highway Commission transferred title to the Board of Aeronautics.

Location

The Aurora State Airport is located in the North Willamette Valley between Portland and Salem as shown on Figure 2, Location Map. The airport lies in Marion County, with the north property line bordering on the Marion-Clackamas County line. The Portland city center is about 20 miles north along Interstate Highway 5, and Salem lies 26 miles to the south.

Access

Airport access convenience plays a key role in determining the size of the area which the airport serves. Figure 3 shows travel times by car. The Aurora State Airport is reached by the local highway system. This system provides relatively good access to most of the airport service areas. However several major drawbacks exist as follows:

1) Several roads serving the airport are constructed to low standards and/or are in poor condition.

2) Only indirect routes are available for access, particularly in the immediate vicinity of the airport.

3) The indirect routes are further complicated by a deficiency in airport related signing.

4) The surface facilities currently serving the airport are exclusively automobile oriented.

The Freeway (I-5) is about a mile west of the airport. It has been and is undergoing improvement for most of its length between Portland and Salem. For this distance the Freeway is an excellent six lane divided highway. It provides convenient access to downtown Portland and southern and western suburbs. The interchange with State Highway 51 just south of Wilsonville affords superior access to the airport.

Travel from the Salem area, although utilizing I-5 for much of its distance, is hampered by the required use of the Fargo Road interchange. This interchange is the only one in the area allowing southern traffic to enter or leave the Freeway between Woodburn and Wilsonville. The result is that traffic must use a narrow, winding road to get from I-5 to Highway 51 in the vicinity of the airport.

Airport users from the southeastern portion of the service area have somewhat more convenient access. Both of the major facilities used, Highways 51 and 99E, have good quality two lane roadways. The access they provide to the impacted airport users is efficient and generally satisfactory.

Highway 99E between Aurora and the Southeastern Portland Communities is a recently improved, undivided four lane facility. It allows adequate mobility but is contrained at times by longer travel times because it passes through several communities on the surface street level as opposed to being grade separated. The adequacy of 99E will be improved in the future with the completion of I-205. The combination of 99E and I-205 will provide a higher level of service to the central and eastern Portland areas. Portland International Airport and southern Washington will also be more accessible by this route.

The major drawback of the northern 99E route is that the highway becomes a two lane facility outside of Aurora and enters town essentially as a surface street. The route then travels a circuitous path over city streets and county roads to reach the airport.

Geography

The airport site lies 3 miles south of the Willamette River about 195 feet above sea level. See Figure 4, Vicinity Map. Topography around the airport is generally level. This precludes a need for extensive grading for airport construction work. However, the flat gradients of the site do not permit good surface drainage, particularly during long rainy periods.

Less than a mile to the east is a large flood plain created by the Pudding River, but the airport site does not flood. The 100-year flood boundary approaches no closer than one-half mile from the airport. During this condition ground travel from the east is restricted but Interstate Five remains accessible to the west and provides adequate, short-term surface access to the airport.

The soil at the site is classified by the Soil Conservation Service (SCS) as Amity silt loam. The soil and its components tend to fall into the clayey-silt or silty-clay category. While such soil is not an ideal construction material, it can be utilized under proper construction procedures as a foundation for pavements and structures required at the airport. The soil has poor internal drainage characteristics and is often limited by a perched water table. Its suitability for septic disposal drain fields is marginal.

CH2M HILL

The climate is a modified marine climate influenced by the Coast Range to the west. Total annual precipitation, usually in the form of rain, has averaged 42 inches (107 cm) at the Agricultural Experiment Station just north of the airport. Most of the rainfall occurs from November to March and summers are dry. Winds are rarely of more than moderate force.

Weather data has been gathered both at the airport and at stations nearby. The normal maximum temperature, 28.7° Celsius (83.6° F) occurs in July. Minimum temperatures below 0° Celsius occur an average of 15 days out of the month during the month of January. Wind analysis is discussed later. Wind data is found in the Appendix.

Ceiling and visibility data are not available for any location in the immediate vicinity of the Aurora State Airport. However, local pilots indicate that Aurora weather is better than average regarding visibility conditions when compared with those airports nearer the Columbia River.

The area from which the airport draws most users is shown on Figure 5. This service area shows the location of owners of aircraft which are based at the Aurora State Airport. The principal population concentration within the service area is generally north of the airport. In 1970, the approximate population within that area was 710,100 people.

Outside of the Portland metropolitan area including suburbs, the remainder of the service area, which contains several outlying communities in Marion and Clackamas Counties, is largely rural in character. Non-agricultural industries are located mostly to the north around Portland and its suburbs.

The greater Portland metropolitan area tends to generate considerable demand for air transportation airport activity there is well above state and national averages. Figure 6, Existing Airport System shows other airports serving the region and making up a regional system of airports. This figure illustrates paved airports, airports with improved facilities, and airports open to the public. A few private airports are also indicated. There are also many small unimproved private fields in the region which are not shown on the figure.

Area Planning - Land Use

The pattern of existing land use and the prospects for future development in the vicinity of the airport are prime considerations in assuring compatible land use as use as the airport grows.

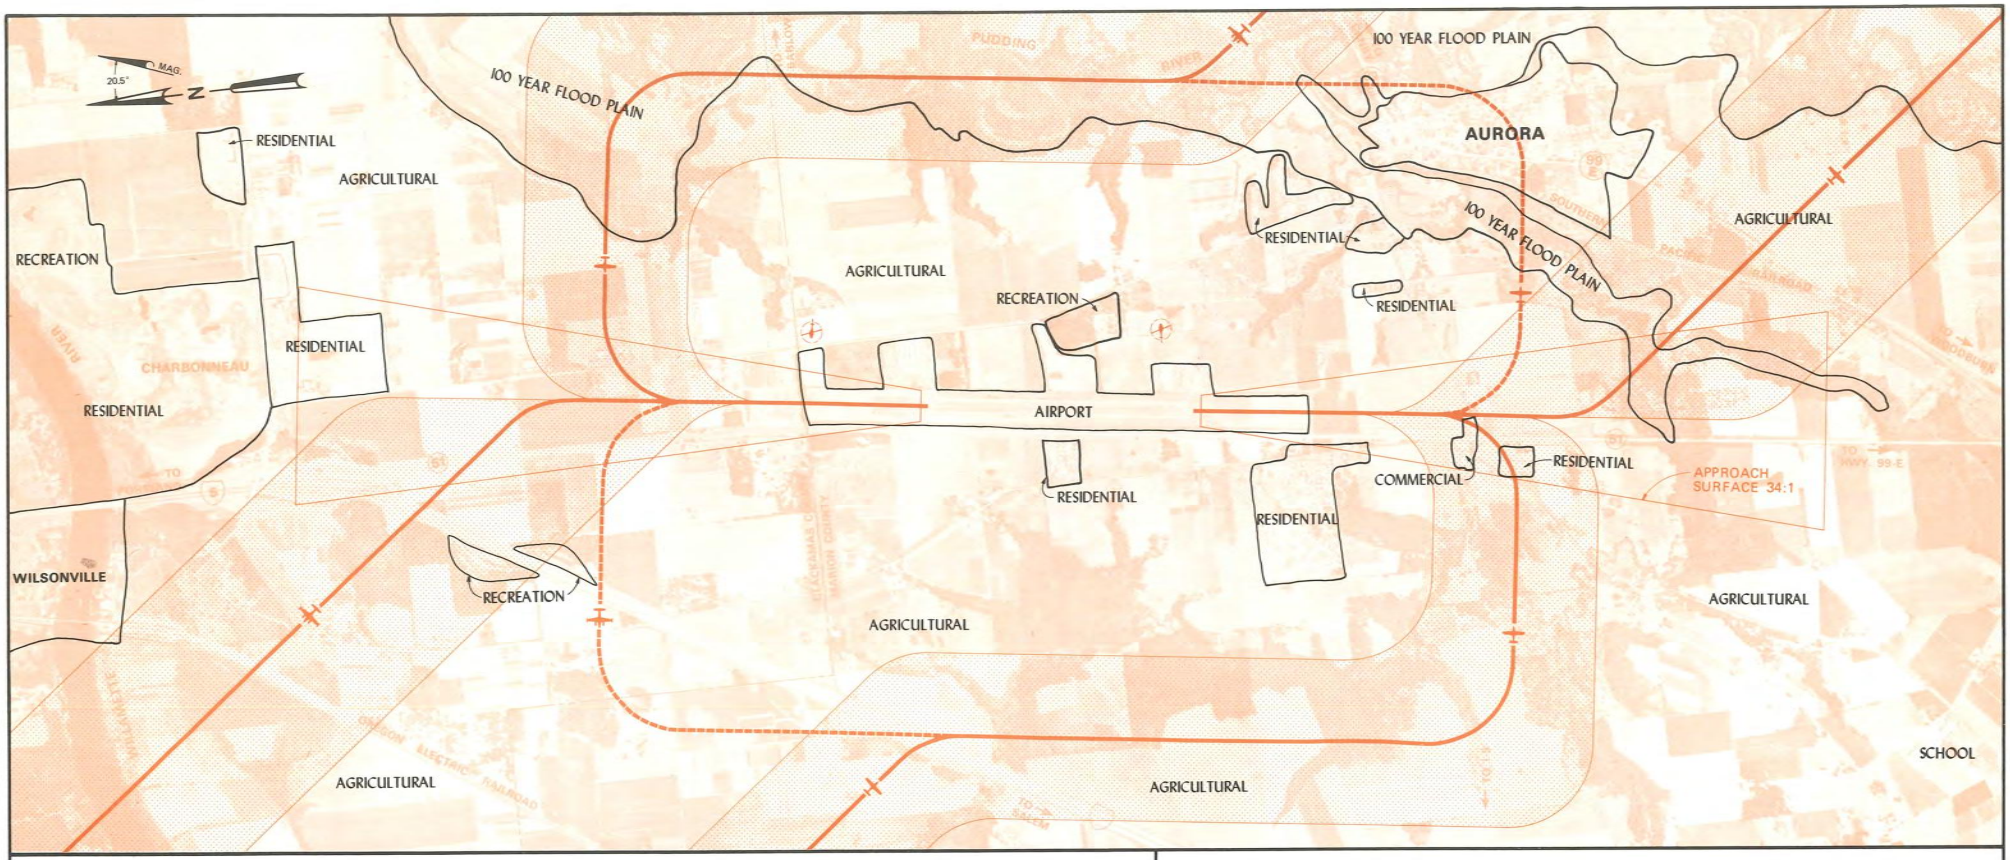
The existing land use pattern, as shown in Figure 7, is predominantly agriculture. The land capability class of the soils is mostly Class II, which is very good farm land. The average 1970 product value for land of this class in Marion County was in the range of $200 to $300 per acre. Typical local products include nursery stock, grass for grazing and for hay, grass seed, orchards, and turkeys.

Three small concentrations of more intensive use exist along the airport perimeter. The largest is a 60-acre residential area west of the Wilsonville-Hubbard Highway, Highway 51. Another is a 35-unit and a mobile home park to the west along the Highway 51. The third is a church retreat group camp located to the east between the runway and the road to Aurora. Figure 8, Existing Noise Exposure, shows the extent of aircraft noise on these areas.

The closest urban development, Aurora, population about 550, is about a mile to the southeast. The City is known locally for its historic founding in 1856 by Dr. William Keil as a religious colony based on communal living. A number of historic buildings are being preserved and antique shops are prevelant.

Wilsonville is located about 3 miles to the north of the airport in Clackamas County. The City originally developed as a farm community and later as a freeway service center. More recently, the City has started to grow as a suburb of Portland. One major addition stimulating growth is a new plant built by Tektronix employing 900 to 1100 employees.

The Clackamas County Comprehensive Plan designates the land adjoining the airport on the north as agricultural and to the east as a flood plain. The Plan provides for growth in Wilsonville including a growth area south of the Willamette River, but that will be deleted from the Plan. Charbonneau is a 770-acre planned community for 5,000 people located just south of the Willamette River, and is shown on Figure 7.



EXISTING LAND USES

AGRICULTURAL:

CHARACTERIZED BY DIVERSIFIED AGRICULTURAL USES AND CROPS INCLUDING VEGETABLES, TREE FRUITS AND NUTS, BERRIES, GRASS AND LEGUME SEED, HAY, GRAIN, NURSERY STOCK, LIVESTOCK AND DAIRYING.

RESIDENTIAL:

RANGES FROM THE CITIES OF AURORA AND WILSONVILLE, THROUGH CONCENTRATED DEVELOPMENTS SUCH AS CHARBONNEAU AND DEER CREEK ESTATES TO SCATTERED SUBDIVISIONS AND MOBILE HOME COURTS.

RECREATION:

IMPROVED FACILITIES INCLUDE THOSE AT CHARBONNEAU, THE CHURCH GROUP CAMP NEAR THE AIRPORT AND THE REST AREA ALONG INTERSTATE 5. OTHER ACTIVITIES RELATED TO THE WILLAMETTE AND PUDDING RIVERS ALSO PREVALENT.

COMMERCIAL:

MOSTLY RESTRICTED TO CITIES WITH ONLY A FEW, SCATTERED POCKETS OF DEVELOPMENT, THE LARGEST OF WHICH IS JUST OFF THE SOUTH END OF THE AIRPORT.

SCHOOL:

GENERALLY LIMITED TO CITIES, WITH NORTH MARION UNION HIGH SCHOOL AS AN EXCEPTION.

FLOOD PLAIN:

DEFINED BY LIMITS OF 100 YEAR FLOOD. AGRICULTURAL, CONSERVATION AND RECREATIONAL USES.

AIRPORT:

INCLUDES RUNWAY, TAXIWAY, CLEAR ZONES AND AIRPORT RELATED, FIXED BASE OPERATIONS. ACTIVITIES INCLUDED ARE FUELING, AIRCRAFT SALES, STORAGE AND REPAIR, AIRCRAFT CHARTER AND RENTAL, AND FLIGHT INSTRUCTION.

AURORA STATE AIRPORT

EXISTING LAND USE

FIGURE 7

CH2M HILL

Although Marion and Clackamas Counties have adopted Comprehensive Land Use Plans, both are general in nature, and are currently undergoing a revision and updating process. The City of Aurora has recently prepared a comprehensive plan indicating urban expansion outside of current city boundaries but not up to the airport.

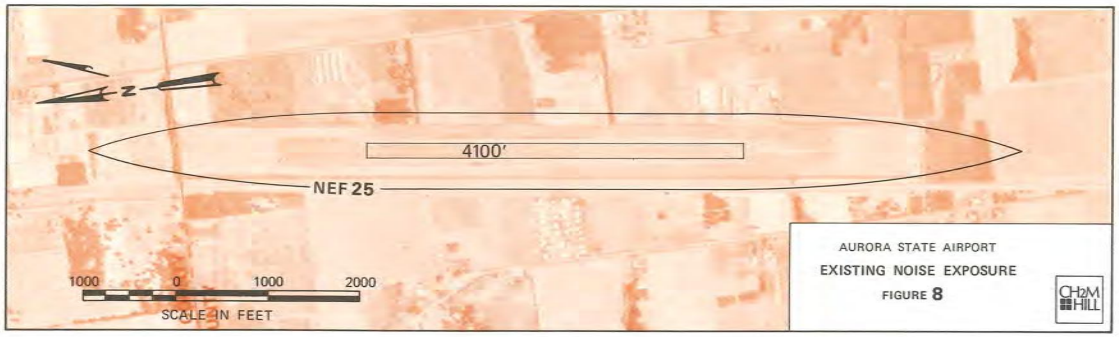
With the exception of the three small residential developments west of the airport the existing land use conforms closely to the adopted Comprehensive Plans. All plans adopt the intent to preserve productive farm land, which includes most of the land around the Aurora State Airport.

Zoning

The Marion County Zoning Ordinance designates a specific zoning district for the Aurora State Airport called "Public Amusement and Recreation" (PA). The provisions of this district are primarily confined to other permitted uses which are incompatible with an airport. This is because nearly all of the other uses permitted outright in the district (amusement park, auditorium, exposition, stadium, and zoo) are incompatible with airport operations due to their typical concentrations of people and noise sensitive activities. In addition, the current district, PA, lacks specific provisions for airport related commercial uses and height obstructions in the surrounding airspace.

Nearly all the land in Marion County surrounding the airport is currently zoned "Residential Agricultural," (RA). The provisions of this district enable the development of country estate, or acreage residential, development in addition to farming. The primary permitted uses include single-family dwellings and farming. Minimum lot area requirements for residential development depend on the nature of sewerage service. In areas served by subsurface sewage disposal, minimum lot area is set by the County Health Department, with no minimum area specified.

Marion County is initiating a program to rezone the Woodburn-Hubbard Area with the purpose of assuring preservation of prime farm land in conformity with the Marion County Comprehensive Plan and Oregon State Land Conservation and Development Commission



(LCDC) Guidelines. The County is rezoning as much land as practical to the "Exclusive Farm Use" (EFU) or "Farm-20" (F-20) classifications. These districts will assure lower density development than currently permitted in the RA zone.

The Marion County Zoning Ordinance does not currently contain provisions to limit building heights as they relate to airspace obstruction surfaces. Buildings in the RA zone are limited in height to 35 feet, except for public and semi-public buildings which may be as high as 70 feet. The EFU and F-20 zones have no height limitations.

The Clackamas County Zoning Ordinance applies to the area north of the airport. This area is currently zoned "Residential Agricultural" (RA-1). Under this classification, residential densities up to two dwelling units per acre are permitted where either public water or sewerage service are provided. For the area in the vicinity of the airport densities lower than two dwellings per acre will be required in the future in order to conform with comprehensive plan policies. Consequently, small acreage residential areas like the one currently under development just south of Charbonneau should not be permitted in the future. Zoning in Clackamas County does not include height limitations.

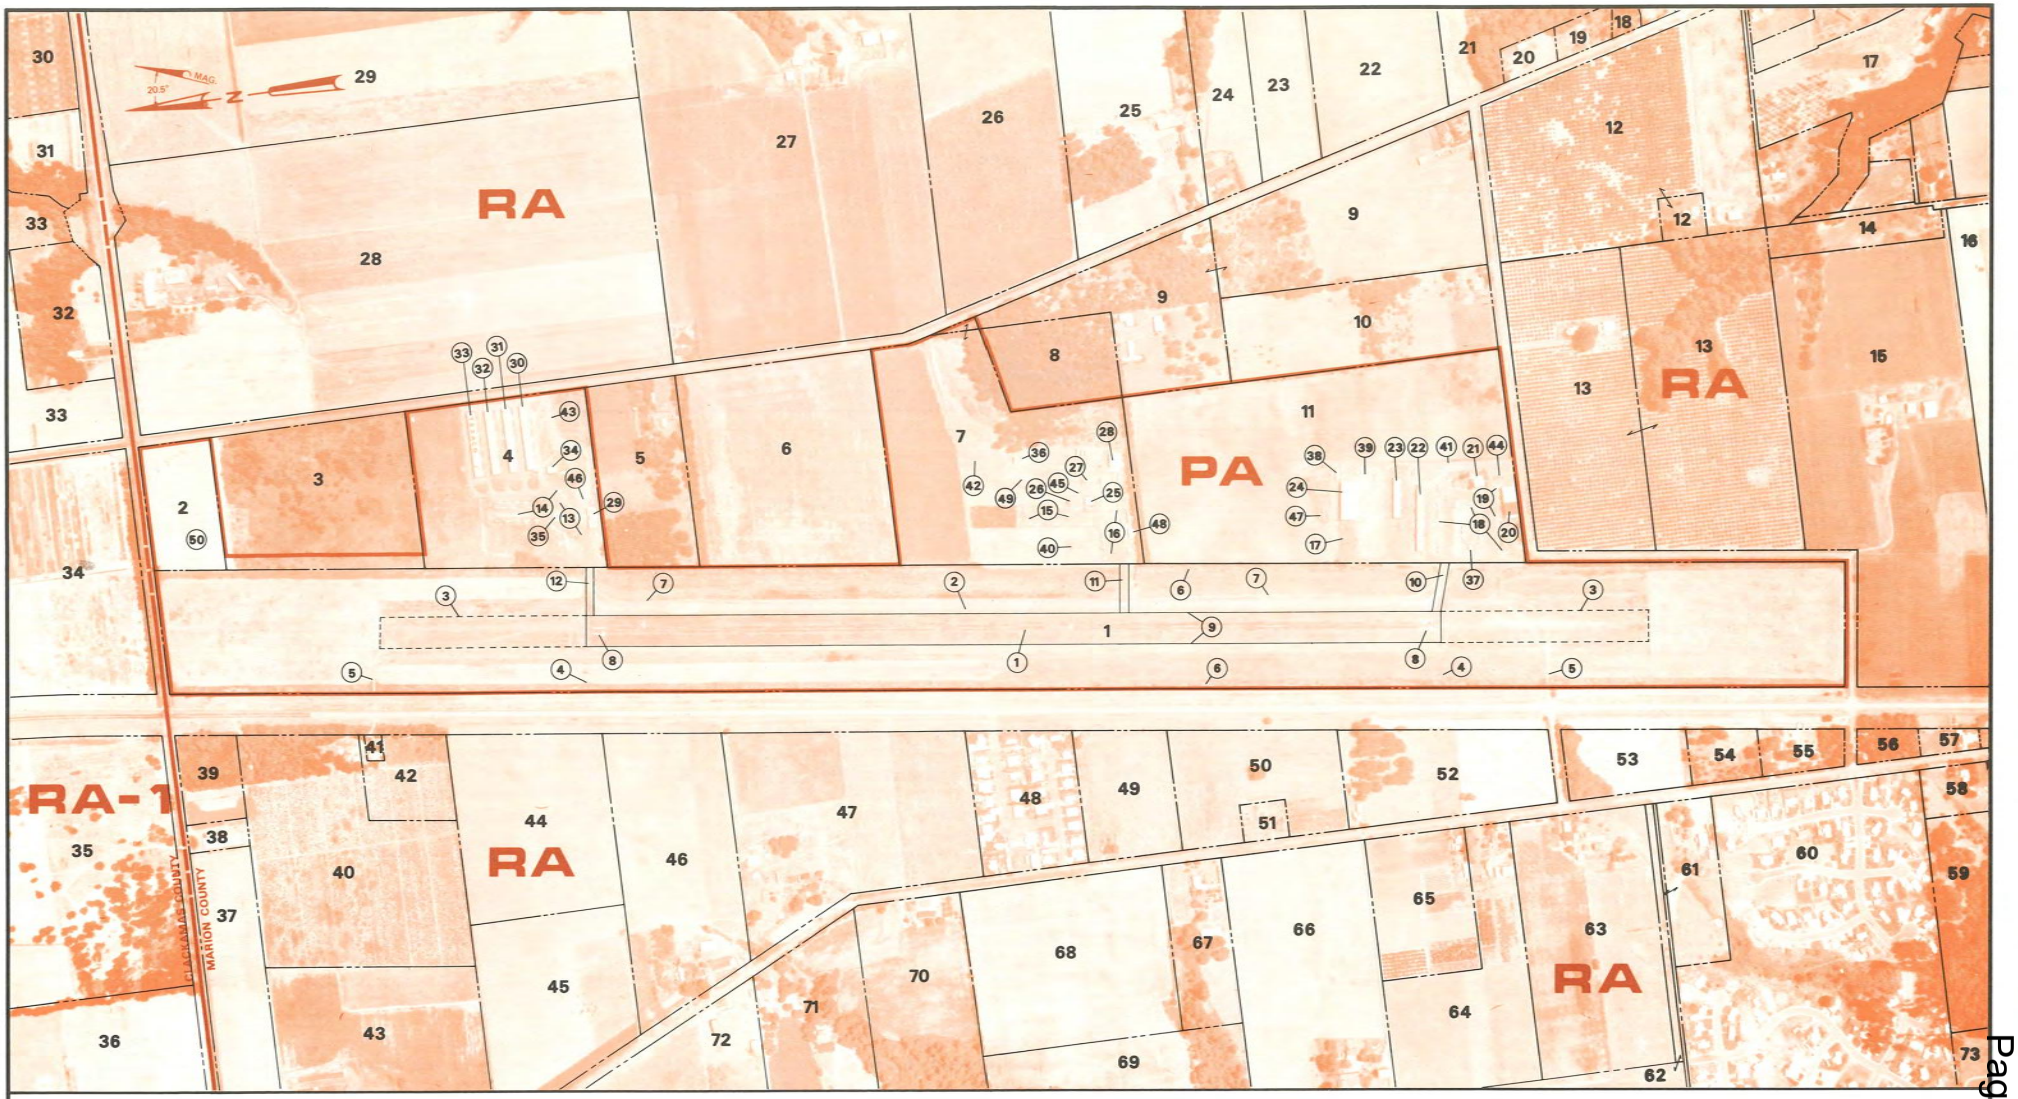
In the future, Clackamas County will be rezoning the RA-1 area to either "Exclusive Farm Use" (EFU) or "Residential Farm-Forest" (RF-F) in keeping with comprehensive plan and LCDC Guidelines. The EFU and RF-F designations would more adequately assure compatible land use in the airport vicinity; requiring 20 and 10 acre minimum lot areas respectively.

Figure 9 shows existing zoning districts on and around the Aurora State Airport.

Existing Airport - 1975

The present Aurora State Airport is the original Aurora Flight Strip. This consists of a single runway oriented north and south on a 113 acre parcel. Except for three privately constructed taxiway exits there are no other facilities provided on the airport property.

The runway is 4100 feet by 150 feet, designated 17/35, and is paved and lighted. It occupies State owned property 600 feet wide and about 8100 feet long paralleling Highway 51. An instrument approach procedure utilizing the Newberg VOR allows limited IFR operations during instrument weather. The airport is shown on Figure 9.



AURORA STATE AIRPORT

EXISTING AIRPORT FACILITIES

FIGURE 9

CH2M HILL

Various private facilities open to the public and located on private lands east of the airport complement the Aurora State Airport facilities. As a public-use airport facility several deficiencies exist. The airport has no main entrance or terminal area. There is no public aircraft parking apron, and there are no FAA facilities on the airport. Table 1 describes the existing facilities, Table 2 provides property information, and Figure 10 shows some of the facilities and conditions existing. General data is provided by Table 3.

The absence of a parallel taxiway system combined with the lack of an FAA traffic control tower poses a rather serious problem as to safety and runway capacity. Taxiing must be conducted on or beside the runway. Since only the runway is State owned and there are three different FBO areas, traffic procedures that would insure safe aircraft are difficult to establish.

Many transient pilots are confused as to which FBO area is their destination and taxi unnecessarily. Often taxiing aircraft are forced to give way to landing aircraft and must leave the runway pavement. This spreads loose aggregate on the runway increasing the potential for propeller damage.

Key points concerning airport layout are:

- The runway length accommodates all aircraft using the airport, which are light twin aircraft and smaller. Occasionally turbojets use this runway. There are all weather 1000- x 150-feet gravel overruns on both ends.
- The airport has no parallel taxiway system or turnarounds. However, the runway width, 150 feet, allows adequate space for turning most aircraft.
- The taxiway system is limited to three stub-entrance taxiways not connected to each other. They serve three apron areas, which are mostly turf.

TABLE 1

EXISTING FACILITIES 1975

ITEM	DESCRIPTION	CONDITION	COMMENTS
(1) RUNWAY 17-35	150' x 4100' ASPHALT CONCRETE PAVEMENT	FAIR	NUMEROUS CRACKS
(2) PARALLEL TAXIWAY	50' x 4100' GRAVEL SURFACE	POOR	TOO CLOSE TO RUNWAY
(3) OVERRUN AREAS	150' x 1000' GRAVEL STABILIZED	GOOD	OVERGROWN WITH GRASS
(4) WIND CONES	YELLOW FABRIC CONES ON METAL POLE	GOOD	SOUTH WIND CONE IS LIGHTED
(5) RUNWAY ACCESS ROADS	UNIMPROVED ROADS	FAIR	MAINTENANCE AND FARM ACCESS ONLY

- The full width of runway pavement is asphalt-concrete of 3-inch thickness over a gravel base, total thickness 18 inches. Pavement strength has been designed for 30,000 lbs. single wheel loading. The surface condition is poor to fair because of oxidation, extensive cracking, and ravelling. There is considerable loose aggregate on the runway surface most of the time.
- Airport lighting consists of low-intensity runway edge lighting, a rotating beacon of marginal visibility and a lighted wind cone. There are no other visual aids to assist pilots during darkness or low visibility conditions.

- There are three conventional hangars, 56 tee-hangar bays, and various other buildings, some mobile. The fixed base operators provide both 80 and 100 octane gasoline, but no jet fuel is available.

- Space for expansion at this time is mainly dependent upon private lease arrangements by the fixed base operators. Between the highway which lies east of the airport and the east property line of the Division of Aeronautics, there are about 177 acres of land held in private ownership. The 113 acres owned by the Division of Aeronautics provides room for runway lengthening, but not for other types of expansion.

FIGURE 10

Economic Impact

Employees on the airport average between 100 and 125, with the majority working on maintenance for a helicopter operator. Total salaries directly generated on the airport are estimated to be about $750,000 annually.

Facilities provided the general public include: waiting rooms, restrooms, telephone, car rental and automobile parking. Commercial aviation services to the public include aircraft rental, flight instruction, charter flying, aircraft maintenance, aviation fuel service, aircraft sales, and aircraft avionics sales and maintenance. However there has been considerable fluctuation in the level of these services.

All revenue-producing activities are located on private land, and generate no income to the airport owner other than a fuel flowage fee of $0.03 per gallon. This is paid to the Oregon Division of Aeronautics which is currently revisings its rates for flowage and ingress-egress. The ingress-egress permits are issued to the three operators by the Division of Aeronautics.

One fixed base operation is located at the south end of the airport, and another operator is located in the center of the field. The third operator, a helicopter maintenance facility, is currently moving from temporary quarters at the south end of the field to permanent facilities at the extreme northeast corner of the airport.

Off the north end of the airport is a parcel of land containing 40 tee-hangars for rent, turf aircraft parking and an aircraft avionics shop. For identification this area is labeled FBO-4 on Figure 4, page 9, although no Fixed Base Operation currently exists there.

Wind Analysis

Two years of wind data was collected between May 1968 and April 1970 at the south end of the airport. This was accomplished under the supervision of the Port of Portland. The data summary appears in the appendix and the wind rose appears on the Airport Layout Plan.

Calms (less than 4 mph) occur 66.5 percent of the time. When the wind exceeds 4 mph, it seldom surpasses 13 mph and generally is either northerly or southerly. Winds in excess of 13 mph normally come from the south. This occurs only about 1.5 percent of the time, and it is rare for the wind velocity to exceed 25 mph. It is not possible with available data to correlate wind conditions with ceiling and visibility to develop a reliable IFR wind rose.

Freak storms, such as the Columbus Day Storm in 1962 are a rare phenomenon with only eight other such occurrances recorded in the last 100 years. During these storms sustained winds have exceeded 50 mph with 110+ mph gusts.

The wind data and analysis used for this study was compared with wind measurements made at the OSU Agricultural Experiment Station 2 miles northeast of the airport. Both were found to be in agreement. The Aurora State Airport wind analysis indicates that the present runway orientation, north 7°8' east, (true) is excellent and provides 99.5 percent crosswind coverage for crosswind components 15 mph and under.

With this coverage Runway 17 can be used 49.4 percent of the time and Runway 35, 50.1 percent of the time. For 12 mph crosswind compnents, the coverage is 99.3 percent. In this case Runway 17 may be used 49.3 percent and Runway 35, 50,0 percent of the time.

Airspace

Figure 11 shows existing airport imaginary surfaces as developed by the Division of Aeronautics in 1972. Any object which penetrates through these geometrical planes needs evaluation as to its effect on air navigation in the vicinity of the airport. The figure also indicates obstructions that should be removed. The State owns air easements, as indicated, which permit the State to remove most of the obstructions shown.

Figure 12 shows the existing airways in the vicinity of the airport. There are no electronic navigational aids located on the airport and there is no certified weather observer on site.

Use of the Aurora State Airport during instrument weather conditions (IFR) is possible with certain restrictions. The airport is served by a non-precision VOR/DME approach using the Newberg VORTAC. The approach is somewhat restricted because this VORTAC is also used for approaches to McMinnville Airport and is a key facility used by the Portland TRACON (Terminal Radar Control Facility). Minimums are 1000 feet ceiling and 1-1/4 miles visibility, which is not very adequate to insure a high rate of useage during IFR weather.

Because Aurora State Airport lies in the Portland Terminal Airspace, some assistance in reaching the airport during conditions of low ceiling with good visibility below the ceiling is possible through the radar coverage of the Portland radar (ASR). However, just over the airport, Portland Approach Control is not able to vector aircraft lower than 3400 feet MSL. North of the airport, minimum vectoring altitude is 2500 feet. In this area, neither terrain nor tall structures pose obstruction problems. Limitations occur only due to incomplete radar coverage.

DEFINITIONS

1. PRIMARY SURFACE – The surface longitudinally centered on the runway centerline and extending 200 feet beyond each end of a specially prepared hard surfaced runway. The width of the primary surface is equal to the width of the beginning of the runway's most precise approach surface
2. "A" TRANSITIONAL SURFACE – The surface that extends upward and outward at right angles to the runway centerline and the runway centerline extended at a slope of 7:1 from the sides of the primary surface and from the sides of the approach surfaces to the horizontal and conical surfaces.
3. "D" HORIZONTAL SURFACE – The horizontal plane 150 feet above the established airport elevation beginning at its intersection with the transitional surface and extending to the beginning of the conical surface.
4. "B" CONICAL SURFACE – The surface extending upward and outward from the periphery of the horizontal surface at a slope of 20:1 for a horizontal distance of 4000 Lf.
5. "C" APPROACH SURFACES – The surface longitudinally centered on the extended runway centerline and extending upward and outward from each end of the primary surface.
6. AIRPORT REFERENCE POINT – The point established as approximate geographical center of the airport landing area.
7. AIRPORT ELEVATION – The highest point on the useable landing area, which elevation is datum to establish the elevation of the horizontal surface.

Air Traffic Activity

For this study, air traffic activity has been compiled from FAA, State, and Port of Portland sources. Insofar as possible, data for this section was obtained from the original source. Also, data collected was correlated with this study's field surveys and was compared with information presented in other recent publications.

Air traffic activity for the Aurora State Airport has been measured in terms of numbers of aircraft based at the airport, and in terms of operations performed by these based aircraft and by itinerant aircraft at the airport. (An operation is either a landing or a takeoff.) Table 4 shows the number and types of aircraft based at the airport.

TABLE 4

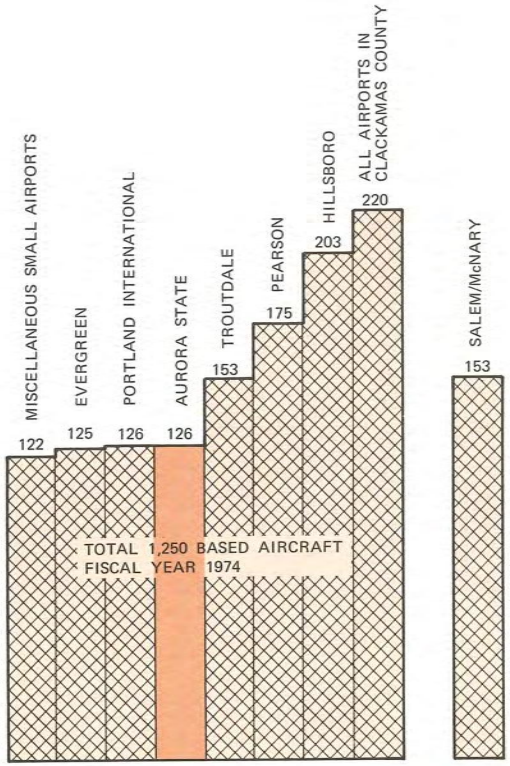
DISTRIBUTION OF AIRCRAFT TYPES BASED AT AURORA STATE AIRPORT (1975)

TOTAL	127
MULTI-ENGINE	8
SINGLE ENGINE, RETRACTABLE	35
SINGLE ENGINE, FIXED GEAR 4 PLACE AND LARGER	45
SINGLE ENGINE, FIXED GEAR UNDER 4 PLACE	35
HELICOPTER	4
TURBOJET	0

The number of aircraft based at the Aurora Airport fluctuates greatly throughout the year, as it does at other Portland area airports. This is because of fluctuations in the inventory of aircraft for sale and due to the seasonal nature of the flying weather. Although the number of based aircraft may fluctuate to as high as 150, the 1974 count from the Port of Portland field survey indicated 126 based aircraft.

At this time, no turbine powered aircraft or gliders are based at Aurora. In recent months, it is estimated that there have been about ten to twelve transient aircraft parked on the airport at any given time. Turbojet aircraft now use the airport intermittently.

Little information is available concerning the purpose for which the aircraft are flown. Approximately 35 to 40 percent of the aircraft surveyed are owned by businesses. These range from the fixed base operator's charter service to a Portland radio station's traffic watch. It has not been possible to determine the actual hours or percentage of business flying.



DISTRIBUTION OF GENERAL AVIATION BASED AIRCRAFT IN PORTLAND SMSA AND AT SALEM/McNARY

FIGURE **13**

SOURCE: PORTLAND – CLACKAMAS AIRPORT STUDY

In the airport's service area, shown earlier, lives a population of about 710,000. Incomes there are above average, which factor influences air traffic levels to exceed normal national averages. Figure 13 shows the distribution of general aviation aircraft in the greater Portland area and the Aurora State Airport's share.

The number of operations flown at the airport determines the level of traffic activity at the airport. Since there is no air traffic control tower on the Aurora State Airport, it was necessary to gather operations information from other sources. Four sources are: The Oregon Aviation System Plan, the FAA Master Record (Form 5010), the Portland-Clackamas Airport Study, and air traffic surveys made by the FAA. Apparently, the first three mentioned sources have utilized some of the same basic data, which conflict with actual counts.

This study's evaluations determined the actual activity levels to be somewhat lower than some of the above source data indicated. This study's base data was determined by adjusting actual traffic counts to correlate with known counts at other local airports with air traffic control towers. Statistics were developed as shown in Table 5. Figure 14 compares activity at Aurora State Airport with other principal regional Oregon airports.

AVIATION FORECASTS

Aviation demand forecasts for the years 1980, 1985, and 1995 have been developed to identify the role of the airport in those years. Factors analyzed were population and economic growth, aviation technology and trends, air traffic activity, and the effect upon the airport of adjacent airport development. The effects of new technology have the least impact because of the type and numbers of aircraft now in the system and the relatively long life of present types.

The boundary of the service area, Figure 5, page 10, indicates that there is little correlation between the location of aircraft owners and the airports they use. No study, or survey, has yet determined the reasons why aircraft owners in the Portland area often choose to use airports that are not the nearest airport to their home or business.

The Portland-Clackamas Airport Study (PCAS), recently completed by the Port of Portland, identifies the Aurora State Airport to be part of a regional airport system in the Greater Portland metropolitan area. The Aurora State Airport, along with other airports draws from the entire region to generate traffic activity. Therefore requirements and the timing of requirements for Aurora State Airport will be influenced by developments at the other airports or at new airports in the Portland region.

The forecasting methodology has been limited by the base data which was available as regards historical aviation statistics and socio-economic data and forecasts. The method used was first, to identify the airport service area and its history, and second, to correlate the airport service area with the area's socio-economic characteristics. Mixed socio-economic projections, mostly population and growth trends, were assembled together with historical air traffic data.

Then, because this airport is inseparable from the "Portland Regional Airport System," it was necessary to examine forecasts on the national, state, and local level. The most up-to-date and comprehensive of the other forecasts is that of the Portland-Clackamas Airport Study. Other source material included miscellaneous FAA material, but primarily FAA's The Northwest Region Aviation System, Ten-Year Plan 1975-1985, and The Oregon Aviation System Plan (OASP) from the Oregon Department of Transportation.

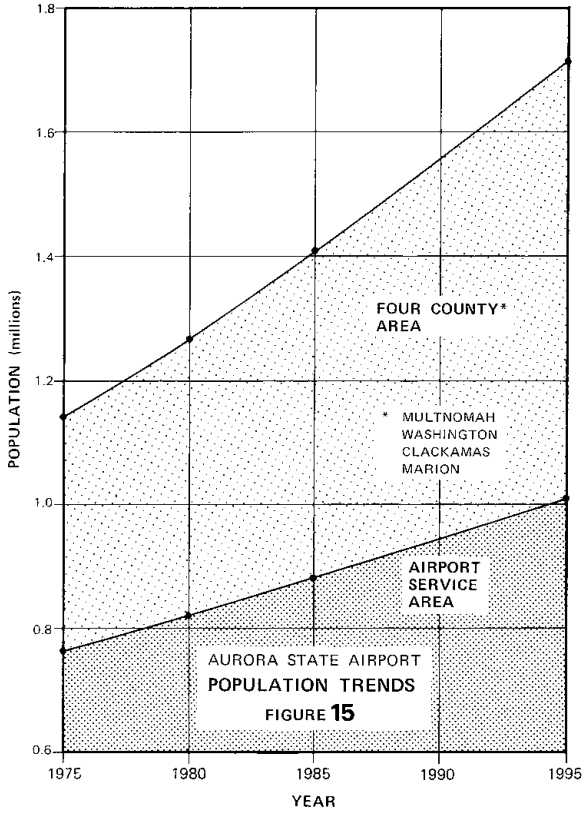
The possible range of forecasting methods was limited for the Aurora State Airport because the service area lies only partially in the Portland SMSA. Much of the base data available for SMSA's is not available for other parts of the Aurora State Airport's service area. Insofar as possible, the Aurora forecasts have correlated based aircraft to population and socio-economic trends.

The aircraft operations forecasts have been correlated to known general aviation activity trends at Control Tower airports with specific on-airport traffic counts. The results were then adjusted to reflect the trends of other recent forecasts just mentioned. Because historical information did not check closely with actual surveys, the comparison of the Aurora State Airport forecast to other studies necessitated considerable adjustments. Comparisons are shown in the appendix.

Figure 15, Population Trends, indicates the predicted 4-county region growth rate from Marion County Comprehensive Plan and data from the Comprehensive Health Planning Association's projections. The service area, as defined earlier predicts a slower growth rate than the SMSA. On this basis, the growth rate at the Aurora State Airport may be expected to be somewhat slower than the growth rate at some of the other airports in the Portland metropolitan area.

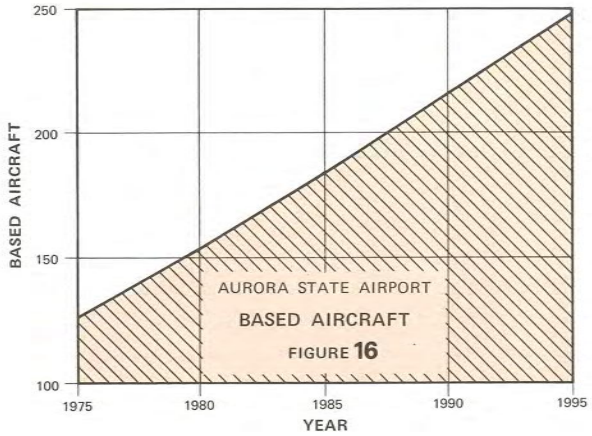
Population forecasts from the above projections for the year 1995, indicate an anticipated population of 1,011,000 in the service area, up from 710,000 in 1970. This represents a 42 percent increase, whereas the four-county increase is projected at 82 percent.

Figure 16 shows the forecast based aircraft at the Aurora State Airport. Other studies' projections are compared in the appendix. The projections used for this study have assumed no new airport in



the southeast Portland area. The appendix contains graphs that indicate either possibility, but the effects were determined not to be critical to this master plan.

The forecast for Aurora State Airport developed in this study uses fewer based aircraft than projections made by other studies. This is because recent surveys seem to indicate inaccuracies in earlier counts of based aircraft. Perhaps the previous counts were taken at periods of peak fluctuations.



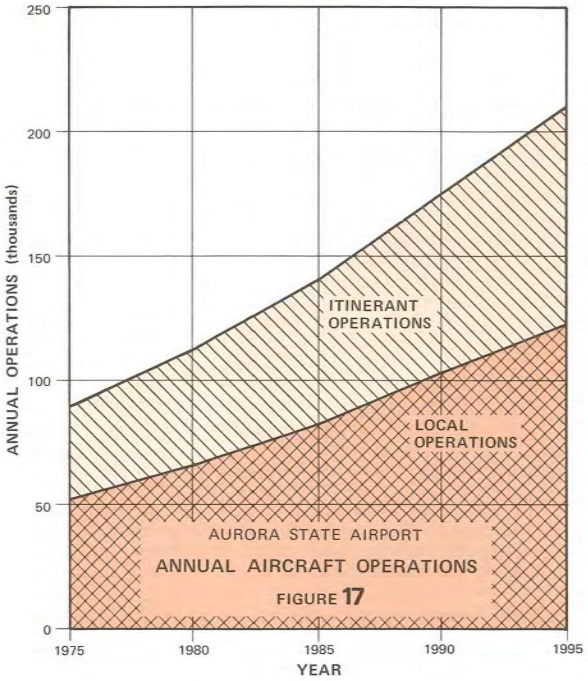
The forecast annual aircraft operations for the Aurora State Airport are shown on Figure 17. These have been projected using the best historical data available, that taken from actual surveys and projected in correlation with FAA counts and projections at Portland-Hillsboro and Portland-Troutdale airports. A verification check was made by using the methods of Report No. FAA-RD-74-178, Estimating Operations at Non-Towered Airports Using the Non-Survey Method.

The operations per based aircraft are predicted to increase from 709 in FY 1975 to 843 in 1995. This is a projected increase of 18.9 percent, which is consistent with other state and national trends.

Consistent with the other mentioned studies and national trends, projections were made for the mix of aircraft types. Figure 18 shows forecast aircraft population for the 5, 10, and 20 year periods.

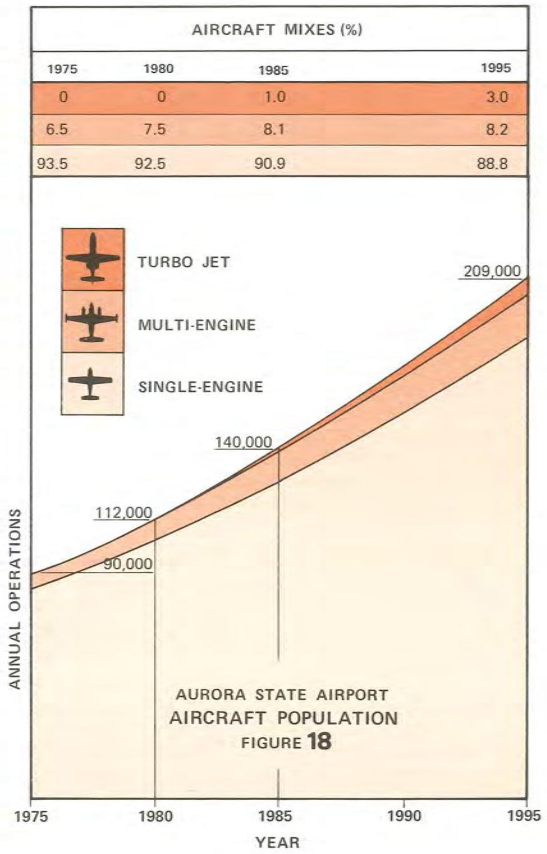
The present and forecast roles of the Aurora State Airport were carefully examined. At the present time, the airport is a General Utility airport (GU), which by definition is an airport whose operational role is to serve all types of piston-powered aircraft of maximum gross weights of 12,500 lbs. or less.

According to the forecasts developed the airport will sustain sufficient numbers of basic transport type general aviation aircraft to change the operational role to Basic Transport (BT). This would occur between 1985 and 1990. A basic transport type is: either any turbojet aircraft, or a propeller aircraft with a maximum gross weight of from 12,500 pounds to 60,000 pounds.



The functional role of the airport, defined by service level, is a high density feeder system airport, designated F-1. This is based upon a level of annual operations exceeding 100,000.

The forecast demands for the Aurora State Airport as used in this Master Plan are shown in Table 6. New developments or management policies may change these forecasts. Also since Aurora is part of the Portland regional system, its competitive position in the system strongly influences the distribution of regional aviation demands.



If the facilities at the Aurora State Airport should in the future be considerably upgraded without significant changes at other regional airports, then the competitive position of this airport may significantly increase the aviation demand at Aurora State. For this reason, projections should be periodically checked and revised.

DEMAND VERSUS CAPACITY ANALYSIS

This analysis determines during which years forecast aviation demands upon the airport will exceed facility capacities. Determinations are included for the short, intermediate, and long range periods (1980, 1985, 1995).

Both the airside and the groundside have been analyzed. The airside includes the runway and taxiway system, as well as the airspace. The groundside includes the terminal area, with aprons, hangars, buildings, utilities, development area, and entrance and access roads.

The forecast aviation demands shown in Table 6 are the basis for this section. Capacity determinations were made using FAA Advisory Circular 150/5060-1A, Airport Capacity Criteria Used In Preparing the National Airport Plan. Capacities for the groundside activities were determined from FAA and other airport engineering standards. It was assumed that instrument operations will be conducted utilizing traffic procedures that will not restrict airspace. Also, it was assumed in studying runway capacity, that an adequate taxiway system would be developed to minimize runway congestion.

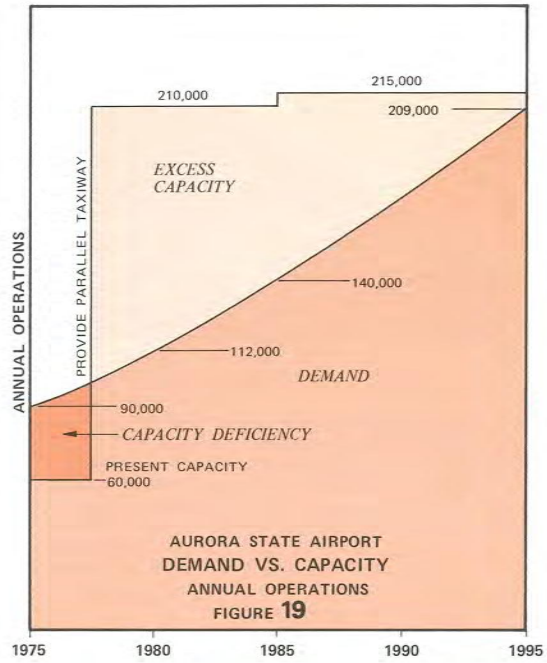
Another factor affecting capacity is the aircraft mix. For this study, it was assumed that the percentage of small general utility type aircraft will exceed 90 percent through the 20-year long range period as indicated on Figure 18, page 22. This assumption conforms to national trends for similar situations.

Direction of runway operation does not restrict capacity at Aurora, where the direction of operation is slightly over 50 percent for the north operation and slightly under 50 percent for the south operation, and where there are no close-in airspace constraints. In the absence of data on IFR conditions at the Aurora State Airport, conditions for the Portland-Hillsboro Airport were used, where records show 92.8 percent VFR and 7.2 percent IFR. The FAA long range capacity method, used as a check, assumes an annual condition of 90 percent VFR and 10 percent IFR.

In the airside analysis, no restriction on capacity was determined to exist in the airspace around the Aurora State Airport. However, as traffic increases, it must be assumed that increased demands for IFR operations can and will be met by improvements to FAA's traffic control system and airway facilities. No procedural problems are anticipated in the vicinity of the airport, such as for noise abatement.

A parallel taxiway is required before runway capacity will be adequate. See Figure 19 regarding present deficiencies. With a parallel taxiway capacity would be acceptable throughout the long range period, provided the taxiway system is adequately upgraded. Runway demands in 1995 are for 209,000 annual operations (without a new southeast Portland airport); whereas a single runway with adequate taxiways has a practical annual capacity of 215,000 operations.

Practical hourly runway capacity based on the FAA method is 53 for IFR and 120 for VFR. No peak hour activity data is available for the Aurora State Airport, but it is estimated that 115 operations may occur during the peak hour during VFR by the end of the 20-year long range period. Figure 20 shows demand versus capacity through the 20-year period. Peak hour activity could vary somewhat, depending upon the daily peaking factor (the amount of daily activity occurring during the consecutive two busy hours). Capacity would not be exceeded if departure delays during the peak hour of the week do not exceed 2 minutes, which is the delay normally accepted by FAA and industry criteria.

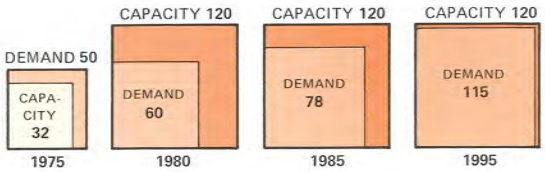


AURORA STATE AIRPORT
DEMAND VS. CAPACITY
ANNUAL OPERATIONS
FIGURE 19

The most critical capacity deficiency facing the airport is the complete lack of controlled ground space outside of the runway area. There are and will continue to be constraints in the terminal area including aprons and buildings and automobile routes until sufficient land is controlled by the airport owner. All of the groundside analyses in this study assume that the airport owner will be able to develop capacities to meet demands through adequate control of airport development land.

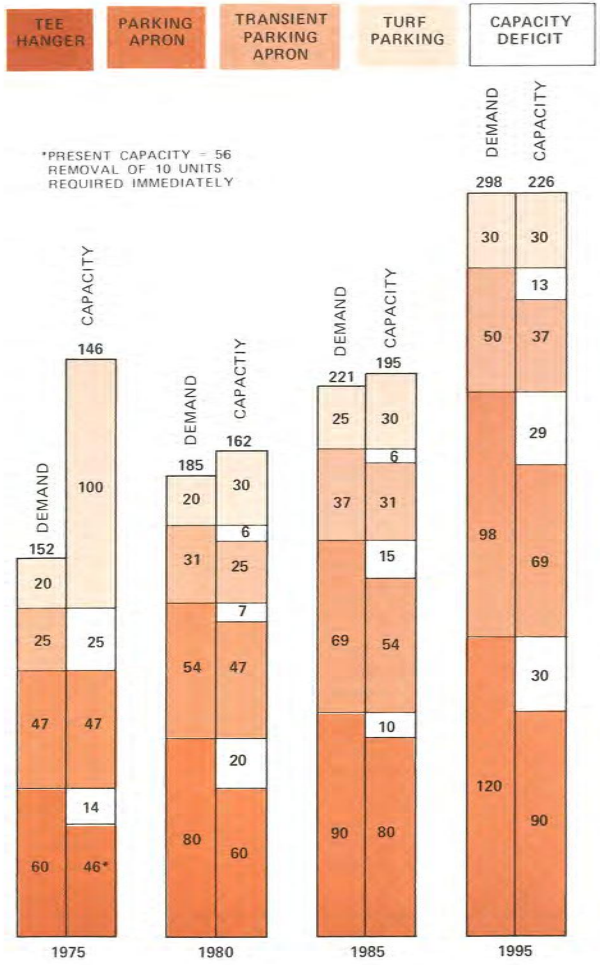
If a single runway at Aurora State Airport is to be satisfactory for the 20-year forecast period, plans must be made to insure that the runway system functions properly. This requires developing a parallel taxiway system including adequate exit taxiways so that runway occupancy time can be reduced to a minimum. This is required for safety as well as for improved capacity.

Parking apron space is the major groundside deficiency and demands will continue to be significant. The requirements for aircraft parking capacities to meet demands are shown on Figure 21. Although many airports provide all parking on pavement, it has been assumed in this case that it will be adequate to park 90 percent of the based aircraft on paved aprons or in hangars. Hangar capacity is presently 56 aircraft. Forecasts show that by the end of the long range period, there will be requirements for 120 tee-hangar bays.



AURORA STATE AIRPORT
DEMAND VS. CAPACITY
PEAK HOUR OPERATIONS
FIGURE 20

Also, there is a requirement for one central entrance road connecting the other roads used by the individual operators on the airport. Additional automobile parking will be required, along with more public terminal building space as traffic demands increase. Specific requirements are discussed in the next section.



DEMAND VS. CAPACITY
AIRCRAFT PARKING
IN NUMBERS OF AIRCRAFT
FIGURE 21

FACILITIES REQUIREMENTS

The requirements in this section for airport facilities are based upon FAA criteria for Utility and Transport airports. Existing deficiencies and undesirable conditions are identified in the INVENTORY The DEMAND/CAPACITY ANALYSIS shows capacity deficiencies and when expansion is required.

In the long range period, around 1985, the airport category will change from General Utility to Basic Transport. This will require a runway lengthening of about 1900 feet in two stages by 1995. Other than additional costs, this requirement poses no serious space problem because airfield size is presently adequate to accommodate a Basic Transport runway.

However, the absolute lack of airport property to either side of the runway area makes land acquisition a prerequisite to any other airport development. Table 7 shows ultimate facilities requirements and indicates many needed improvements that cannot be placed on present airport property. The table also recommends 1140 acres to be zoned as a buffer zone overlay for land use protection against airport encroachment.

A single runway system is adequate for future needs through the 1995 period studied. Neither capacity constraints, nor constraints posed by crosswind coverage require a second runway, and the effect of constructing or not constructing a new southeast Portland airport will not change this adequacy during the Master Plan study period.

Current runway length, 4100 feet, is slightly more than the General Utility requirement, which is 3600 feet. A Basic Transport length accommodating about 60 percent of the fleet with a 60 percent load would be 4700 feet. One hundred percent of the BT fleet at 60 percent load requires 5300 feet. This Master Plan recommends lengthening to 5000 feet shortly before 1985 and retaining the present 30,000 pounds single gear pavement strength. In the 1985 to 1995 period the runway should be increased to about 6,000 feet and single gear pavement strength increased to 60,000 pounds. Sixty percent of the BT fleet at 90 percent load requires 6300 feet.

The present width, 150 feet, should be retained to provide a somewhat better level of safety, particularly during periods of strong winds. When a MLS or equivalent system is installed, a wide runway will be desirable particularly for turbojet aircraft operating at relatively high approach speeds. Depending upon the development of MLS runway standards this recommendation is subject to change. Retaining the present width of pavement will also minimize construction problems associated with future runway edge lighting.

The taxiway system is very critical to airport safety and capacity. A parallel taxiway, the entire length of the runway, is required immediately with adequate exits from the runway. New stub taxiways from the parallel taxiway to all apron areas are also required. The stub and exit taxiways should be lighted with medium intensity lights and should be marked. Taxiway reflectors are suitable for the parallel taxiway.

Paved aircraft parking aprons are required immediately. Virtually all aircraft are currently parked on turf, which causes stability problems during wet weather. No apron facilities are provided for transient parking. A centrally located public parking apron will solve this major deficiency.

The frequency of instrument weather conditions and long winter hours of darkness dictate an upgrading of the lighting and navigational systems. Medium intensity runway edge lighting should be installed, including visual approach slope indicators (VASI) on both ends. An on-airport or near-airport nonprecision approach aid should be added to provide better minimums and higher IFR capacity. Eventually an MLS is recommended. This should be supplemented by an approach light system such as MALSF.

As the trend for ownership of more expensive airplanes and more multi-engine airplanes increases, the shortage of tee-hangars will become even more critical. As airport services increase additional conventional hangars will be required. Aircraft security needs will increase as more aircraft are based at the airport and as ground traffic increases. Better fencing and more lighting around aircraft parking areas will be required.

TABLE 7

ULTIMATE FACILITIES REQUIREMENTS

DESCRIPTION	EXISTING (1975) FACILITIES	1995 REQUIREMENT	RECOMMENDED DEVELOPMENT

(1) Replace Existing (4) Remove 10 Existing
(2) Abandon 80 Existing (5) By Private Development
(3) By FAA

Eventually, greater activity on the groundside of the airport will necessitate more terminal and operations building space together with a centrally located administration building. There should be only one prominent entrance road to the airport and an internal road system that connects the entrance road to the various services and operators and apron areas. As more people use the airport, it will be necessary to upgrade the sanitary waste systems, and possibly centralize waste treatment facilities on the airport or in a municipal system.

The needs for development will create a need for capital for investment. Therefore it will be necessary to stimulate revenue producing activities by generally encouraging airport related commercial activities that will provide financial support to the airport.

ENVIRONMENTAL REQUIREMENTS

The principal environmental effects of airport development include: noise, air and water pollution, ecological impacts, social impacts, and effects of construction and operation. The development of many of the improvement projects needed for the airport will affect the environment, sometimes noticeably and sometimes imperceptibly.

The primary environmental consideration at the Aurora State Airpot is to have compatible land use in the airport vicinity. Exposure to aircraft noise mostly determines compatibility. Other considerations are aircraft accident potential, air pollution, and effects of vehicular traffic patterns.

Aircraft noise exposure often has adverse behavioral and subjective effects on people. Behavior effects involve interference with on-going activities such as speech, learning, and sleeping. Subjective effects are described by terms like "annoyance" and "nuisance." The magnitude of the problem depends on the volume, frequency, and time of day of aircraft operations; the number of turbojet aircraft operations; and the character of land use exposed. Table 8 describes typical noise impacts on land use.

The aircraft noise generated at a general aviation airport like Aurora State is ordinarily minimal because there is no appreciable number of turbojet or night operations and because the surrounding development has a relatively low population density. Critical noise contours for existing conditions do not fall outside the airport. See Figure 8, Existing Noise Exposure, page 13.

The FAA, with assistance from EPA, is responsible for regulating aircraft noise. To date no specific regulations or standards for acceptable aircraft noise exposure limits on land use have been established. Instead, general guidelines regarding land use compatibility and noise exposure are used. A technical forecast of noise exposure levels is included in the AIRPORT PLANS section.

Land use compatibility guidelines are based on the relative noise sensitivity of different activities. The most sensitive uses are those involving conversation and sleeping. Typically, auditoriums, arenas, schools, hospitals, and housing are the least compatible and open space uses like farming are the most compatible. Consequently, preservation of the existing agricultural land use pattern around the Aurora State Airport is the key to compatible land use regardless of the noise exposure levels.

TABLE 8

LEGEND

NO CONFLICT | LOW CONFLICT | MODERATE CONFLICT | SERIOUS CONFLICT

Reducing aircraft accident potential may require regulating the height of objects under established flight paths and prohibiting light and smoke emissions that adversely effect the pilot's vision. Because the greatest probability of aircraft accidents is either on or immediately adjacent to the runway. It is important that the airport itself meets adequate design standards. It is also adviseable to discourage large concentrations of people or hazardous materials within the approach and departure paths. This is a matter for local agencies to regulate in cooperation with the airport owner.

The air quality aspects of airport development are regulated by the Oregon Department of Environmental Quality (DEQ). DEQ is responsible for assuring compliance with State and Federal air quality standards. The Aurora State Airport is subject to the indirect source rules as set out in OAR 340. Under these rules, the potential impacts of airport operations on air quality need to be evaluated only when a modification to the airport is proposed that will increase annual operations by 25,000 or more within 10 years after completion of the improvement. This impact evaluation is called for just prior to the time of making the improvement.

The vehicular circulation aspects of airport development need to be considered in the context of congestion on existing highways. Based operations at the airport currently have individual access points. Consideration must be given to linking all ground operations with a continuous system on the site in order to minimize confusion, congestion and accident hazards on the bordering highways.

At this time, it appears that there are no significant ecological or social impacts upon the airport environs. It is important that future development programs minimize the possibility for dislocating persons or businesses.

This Master Plan does not require that an Environmental Impact Assessment Report be performed. Later at the time of construction major capital improvements at the airport will require a full disclosure of environmental effects expected to result. This will be disclosed in an Environmental Impact Statement as required under the National Environmental Policy Act of 1969.

SITE SUFFICIENCY

The existing site of the Aurora State Airport was evaluated as to its adequacy to meet forecast requirements and according to possible environmental conflicts. Alternative airport sites shown on Figure 22 were identified, examined and compared to the existing airport. The full report is included in the appendix. It concluded that the existing site is adequate and should be retained. This choice gives the most public benefit for the least financial cost and adverse impacts.

AIRPORT PLANS

CONCEPT

Conceptual considerations were based on Master Plan Forecasts, Table 6, page 24, and Ultimate Facilities Requirements, Table 7 page 26. In the 20-year study period requirements are for a single runway general aviation airport of high quality and having a large terminal area and ample off-airport protection from encroachment.

The effective use of space is the critical ingredient to developing or improving the airport system. Space for airport expansion is impacted on three sides by highways which would be relatively difficult to relocate, and on the fourth side by privately owned and controlled property.

Previous study determined that the best course of action is to develop the present airport. The full report regarding site sufficiency is found in the APPENDIX. Because the airport is a use of land predominately compatible with existing uses in the area, the present runway position has been retained. Expansion will occur into the space east of present airport property. This is shown on Figure 23, Airport Layout Plan.

Other alternatives were considered and discarded for reasons of costs, adverse impacts, public acceptability and other practical considerations. One alternative considered was to aquire land to the south of the runway. All expansion would then be toward the south. Although for the reasons above this concept was rejected, it will be reconsidered in the future and used if warranted.

AIRPORT LAYOUT PLAN

The Airport Layout Plan graphically illustrates the proposed development for the existing airport through the 20-year forecast. The plan provides dimensions of proposed facilities and several tables of data explaining the plan. Details of the development staging are covered later in the Master Plan.

Key points for the 20-year period include:

- In order that there can be an implementable Master Plan the Airport Layout Plan prescribes acquiring 116 acres of land in fee on the east side of the airport. Without this space for airport development it will be impossible to implement a complete and productive airport development program.

  Also 18 acres of land is to be acquired in easement for obstruction removal and for airspace protection north of the airport.

- The existing airport is to be retained with a few criteria surpassing usual maximums. The existing runway remains at its current length, slightly longer than GU requirements, (4100 versus 3600 feet), and will remain 150 feet wide instead of the usual 100 feet.

  The parallel taxiway will be placed at 225 feet instead of 200 feet because of existing drainage conditions, and the building restriction line will remain at 500 feet as established several years ago.

  Pavement strength will remain at 30,000 pounds S.G. except where lighter strength aprons are to be permanently used for lighter aircraft only.

- The runway will be improved from the existing 4100 feet and 30,000 pounds S.G. strength ultimately to 6,000 feet and to 60,000 pounds D.G. strength.

- A parallel taxiway will be constructed with several 90 degree exits and stub taxiways to provide direct access to the parking aprons.

- Paved aircraft parking aprons for 98 based aircraft and 50 transient aircraft will be developed, and turf parking for 30 aircraft will be improved.

- Lighting improvements will be extensive. Medium intensity runway and taxiway lights will be added together with taxiway reflectors on the parallel taxiway, a new beacon, VASI's for both runway ends, MALSF and apron lighting.

- New navigational aids (NDB and MLS or equivalent) are specified in addition to an air traffic control tower.

- Airport entrance and internal road systems will be considerably modified on the land which is to be acquired and new automobile parking areas will be provided.

- The airport will be divided into areas of different uses which will be kept segregated. The aircraft areas will be separated from public and commercial areas by security fences. Perimeter fences will enclose the entire airport.

- Ultimately a terminal/administration building and a crash/fire/rescue station will be constructed. More hangars are prescribed.

- A heliport is specified for the ultimate airport.

The Airport Layout Plan has been approved and will remain the official guide for airport development until revised.

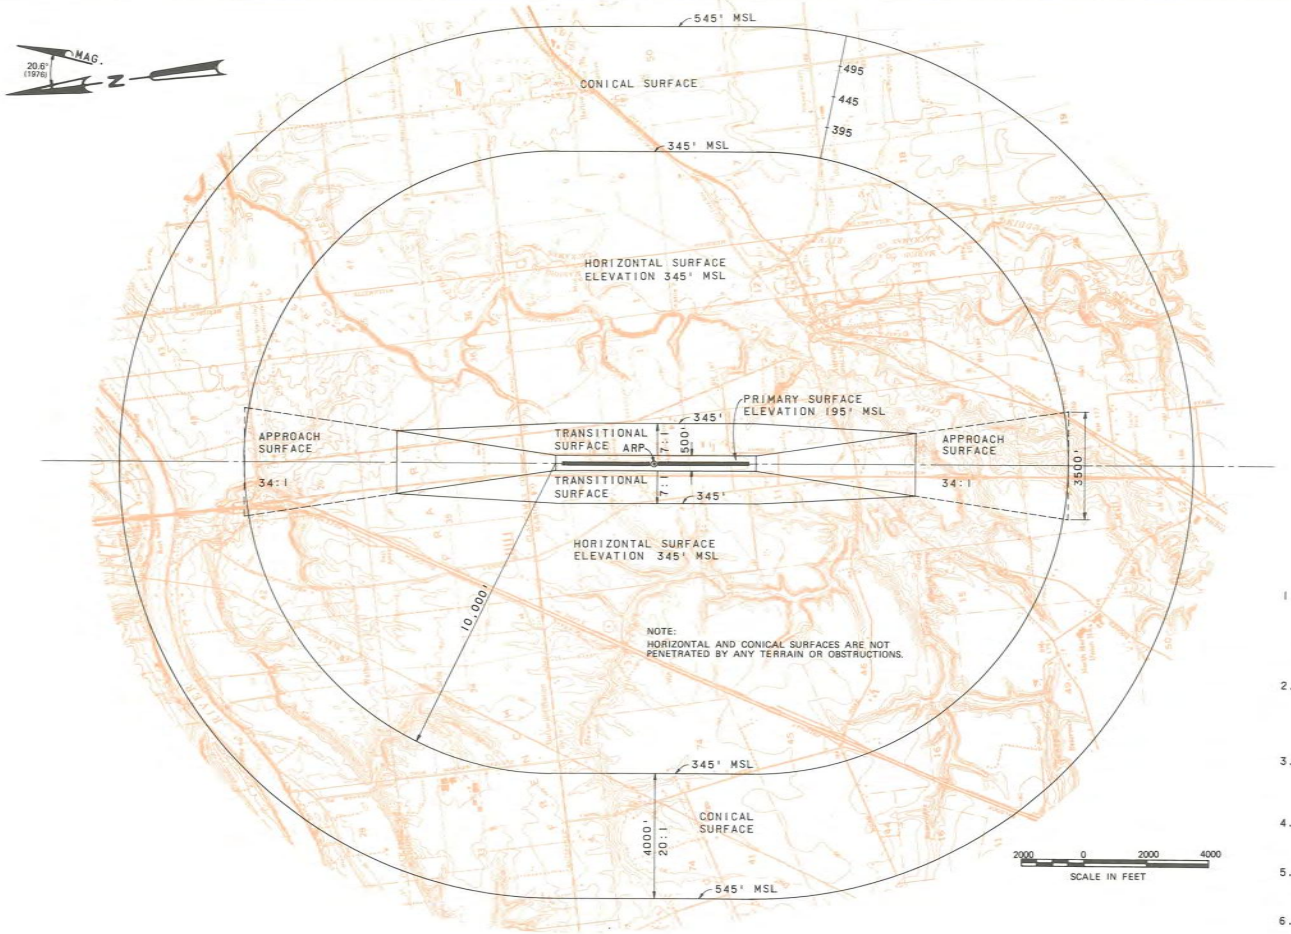
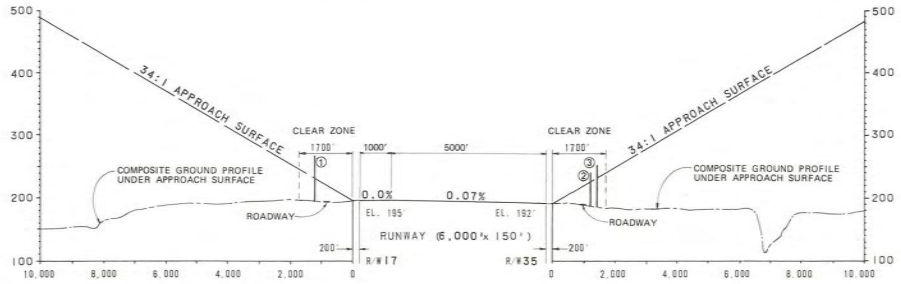
APPROACHES, OBSTRUCTIONS, EASEMENTS

Figure 24 shows the ultimate airport imaginary surfaces and is a part of the Airport Layout Plan. These surfaces are according to Federal Aviation Regulations Part 77 and are much like the existing surfaces.

The existing surfaces as of June 1976 remain as illustrated on Figure 11, page 19. This plan was prepared in 1972 by the Aeronautics Division.

After existing obstructions are removed few future problems are anticipated. Existing air easements are to be retained and one new area north of the airport is to be acquired. The figure depicts Part 77 standards for a nonprecision instrument runway.





OBSTRUCTION REMOVAL SCHEDULE TO MEET FAR PART 77 CRITERIA

NUMBER	OBSTRUCTION	ACTION	PHASE
①	TREES	TO BE REMOVED	PHASE I
②	TREES	TO BE REMOVED	PHASE II
③	TREES	TO BE REMOVED	PHASE II
④	MISC. TREES TRANSITION SURFACES (Not shown. see Fig. 11)	TO BE REMOVED	PHASE I & II

DEFINITIONS

1. PRIMARY SURFACE - THE SURFACE LONGITUDINALLY CENTERED ON THE RUNWAY CENTERLINE AND EXTENDING 200 FEET BEYOND EACH END OF A SPECIALLY PREPARED HARD SURFACED RUNWAY. THE WIDTH OF THE PRIMARY SURFACE IS EQUAL TO THE WIDTH OF THE BEGINNING OF THE RUNWAY'S MOST PRECISE APPROACH SURFACE.
2. TRANSITIONAL SURFACE - THE SURFACE THAT EXTENDS UPWARD AND OUTWARD AT RIGHT ANGLES TO THE RUNWAY CENTERLINE EXTENDED AT A SLOPE OF 7:1 FROM THE SIDES OF THE PRIMARY SURFACE AND FROM THE SIDES OF THE APPROACH SURFACES TO THE HORIZONTAL AND CONICAL SURFACES.
3. HORIZONTAL SURFACE - THE HORIZONTAL PLANE 150 FEET ABOVE THE ESTABLISHED AIRPORT ELEVATION BEGINNING AT ITS INTERSECTION WITH THE TRANSITIONAL SURFACE AND EXTENDING TO THE BEGINNING OF THE CONICAL SURFACE.
4. CONICAL SURFACE - THE SURFACE EXTENDING UPWARD AND OUTWARD FROM THE PERIPHERY OF THE HORIZONTAL SURFACE AT A SLOPE OF 20:1 FOR A HORIZONTAL DISTANCE OF 4000 FEET.
5. APPROACH SURFACES - THE SURFACE LONGITUDINALLY CENTERED ON THE EXTENDED RUNWAY CENTERLINE AND EXTENDING UPWARD AND OUTWARD FROM EACH END OF THE PRIMARY SURFACE.
6. AIRPORT REFERENCE POINT (ARP) - THE POINT ESTABLISHED AS APPROXIMATE GEOGRAPHICAL CENTER OF THE AIRPORT LANDING AREA.
7. AIRPORT ELEVATION - THE HIGHEST POINT ON THE USEABLE LANDING AREA, WHICH ELEVATION IS DATUM TO ESTABLISH THE ELEVATION OF THE HORIZONTAL SURFACE.

TERMINAL AREA PLAN

This plan is a part of the Airport Layout Plan, and shows an area which needs significant development. In order to provide assurance that runway and terminal areas can be developed in harmony, it will be necessary first to acquire the land for the terminal area. This will enable the existing flight strip type of airport to become a complete airport, particularly as regards adequate public service areas.

By providing a parallel taxiway with stubs to various apron areas the airport users will have all weather parking and have easy access to tee-hangar parking. Figure 25 shows the Terminal Area Plan.

The terminal area is separated into three general areas. The first is the south portion of the terminal area where 2 fixed base operations with several tee-hangars will be located. There will be ample room for individuals and businesses to lease space and provide their own hangars and individual service facilities.

In the center of the airport will be space for general public oriented activity. Next to the runway will be a central public apron with terminal building and space for airport maintenance and management personnel. This area will contain in the center of the airport the FAA air traffic control tower, the crash/fire/rescue station and a heliport.

Just east of the central terminal area is a large area designated as a commercial/industrial park to accommodate aviation directly related or other carefully selected compatible light industrial facilities. By being located on airport property such commercial facilities can provide better services to the flying public and also provide income to broaden the financial base of the airport.

An area on the north part of the future airport property has been designated for a central airport waste treatment facility. Depending upon actual needs and State regulations a forced main to a municipal facility might be considered. This is a subject for study as the Master Plan is implemented.

Another smaller developable area suitable for further expansion as a third FBO operation lies at the north end of the terminal area property.

The internal road system is designed to provide convenient access to all parts of the airport. It will separate different kinds of airport users. Aircraft areas are to be separated from the general public and from commercial/industrial areas. Apron lighting and security fencing are prescribed for the aircraft parking area.

SURFACE ACCESS

Although surface access to the airport has been carefully studied, it is beyond the scope of an implementation program to develop improvements to the access system. Therefore only recommended solutions have been prepared and are shown on Figure 26, Recommended Airport Access Plan. These recommendations are advisory for other agencies having jurisdiction.

The Recommended Airport Access Plan relies on the strong points of the existing surface transportation systems and reinforces its deficiencies. The basic concept is to provide convenient access from the service area to the main airport entrance.

The Recommended Airport Access Plan makes maximum use of existing facilities with minimum capital expenditures to obtain an efficient airport access system, one that is well suited to the future expansion of the airport. The system may not significantly reduce the travel time of the airport users, but it will substantially improve convenience and safety.

It should retain the present access that Aurora residents have to the airport. However, the major flow of traffic to the airport should be diverted around Aurora allowing the city to remain unaffected by future airport generated traffic, which would aid in attempts to maintain the historical significance of Aurora.

If other highway criteria permit, it is important to provide access south via the freeway which is not presently available. This would be accomplished by a partial interchange as shown. This also could aid in preserving the quiet nature of Aurora.

Travel on lower type facilities should be discouraged. By utilizing predominantly higher type roadways actual modification and maintenance in the field can be minimized. It is estimated that airport related activities will generate approximately 200 automobile trips at the peak hour in 1995. This amount is not significant in its impact on the area transportation system or on the major facilities.

The use of major facilities will eliminate most of the problems associated with the circuitous routes now serving the airport. The costs of operating and maintaining major facilities will be spread over a larger population, which is appropriate because of the regional nature of the Aurora State Airport.

An extensive signing program must complement any ultimate routing to the airport. This will alert the public, particularly the airport users, to the most expeditious route to the airport. Without this, much of the benefit of the other steps may be lost.

Finally, the potential exists for the extension of the Portland Metropolitan area transit system (Tri-Met) to include a route that would pass immediately north of the airport on Arndt Road. Routes are now established in Canby and Wilsonville. A tie-in with these would provide a transit link that would allow travel by transit from the airport to virtually anywhere in the metropolitan area.

ENVIRONMENTAL CONSIDERATIONS

Environmental assessments have been made based upon the Airport Layout Plan drawings and upon the forecast traffic. None of the physical developments proposed require an Environmental Impact Assessment Report at this time. However the runway lengthening proposed after the next five year period will require a formal environmental process prior to construction.

Adverse environmental impacts include noise effects, air and water pollution and some traffic congestion due to build-up in the area. Figure 27 shows noise exposures for 1980, 1985 and 1995. The noise contours were developed using the forecasts given earlier in Table 6, page 24, and information on aircraft population, Figure 18, page 23. Table 8, page 27, shows noise impacts on land use.

Generally when NEF contours are below 30 the noise impact is slight and requires no special noise insulation for new construction. When the NEF is between 30 to 35 new construction should be undertaken after analysis of noise reduction requirements has been made and needed noise insulation features included in the design of buildings in that area. Because of the agricultural nature of the land around the Aurora State Airport the noise exposure, even in 1995, should not effect a large number of people.

Although aircraft emit air pollutants, they are small in numbers compared with the automobile. Table 9 shows air quality impacts produced by the forecast aircraft traffic at the airport. Automobile traffic on the airport was not analyzed.

In considering how to diminish the environmental impacts produced by the Aurora State Airport alternatives were examined. The main alternatives are:

- to make no improvements
- to make the improvements according to a Master Plan
- to close the airport

TABLE 9

AIR QUALITY IMPACTS
(peak hour)

TURBO JET	0.0120	0.0375	0.0015	0.3465	0.1590
TOTALS	0.0228	0.0429	0.0069	0.5580	0.1856

If nothing is done to the airport the tendency for airport encroachment will become stronger and environmental incompatibility could become a serious problem in a few years. The existing runway length accommodates several turbojet aircraft now, and it is doubtful that a do-nothing alternative would reduce their environmental impact significantly. If no improvements are made to the airport, the airport would be expected to continue to support growing numbers of traffic with reduced safety standards.

Therefore it has been deemed best for the environment to develop the airport with a positive approach to minimizing adverse environmental impacts as development is accomplished.

In fact it is the policy of this Master Plan to assume that the airport owner and local public agencies will take action to inform the public and to discourage incompatible land uses. Action in this direction has already been taken by the Aeronautics Division as evidenced by the public involvement program itemized in the APPENDIX. Marion County's current action to down-zone to EFU (Exclusive Farm Use) around the airport represents another measure that will insure continued land use compatibility.

The airport is an established public facility providing a significant contribution to the Oregon Transportation System. Serious consideration to closing the airport does not appear warranted because the unfavorable environmental impacts are not severe. Closure itself would have a serious adverse impact because there would be a need to relocate several persons and businesses. Following this secondary social and economic problems would occur.

LAND USE PLAN AND RECOMMENDED ZONING

Although the airport has been found to be providing a service to large numbers of users, it can remain in public acceptance only as long as its compatibility with the surrounding land use is preserved. This Master Plan has developed a Land Use Plan for adjacent areas, shown in Figure 28. That plan is compatible with development proposed by the Airport Layout Plan.

The Land Use Plan shows land uses recommended in the vicinity of the airport which are closely in conformance with the comprehensive plans of Marion County and Clackamas County. Unique to these comprehensive/plans would be the indicated airport buffer overlay which this Master Plan recommends for adoption by both counties. The buffer zone overlay follows the NEF 30 contour and will protect both the airport and the citizens who might otherwise move into noise impacted areas.

The airport Master Plan has been submitted to Marion County and Clackamas County for guidance in adopting new zoning in agreement with the airport. Figure 29, recommends a zoning plan and three new zones. The first zone is an Airport Development Zone, described on Figure 29. This zone is presently mostly PA, Public Amusement, for the airport and RA, Residential Agricultural, which is propsed for change to F-20, Farm-20 acres or EFU, Exclusive Farm Use.

The second zone is an Airport Buffer Overlay Zone, also shown on Figure 29. Restrictions imposed by this overlay should take precedence over any conflicting permitted uses in the zones under the overlay.

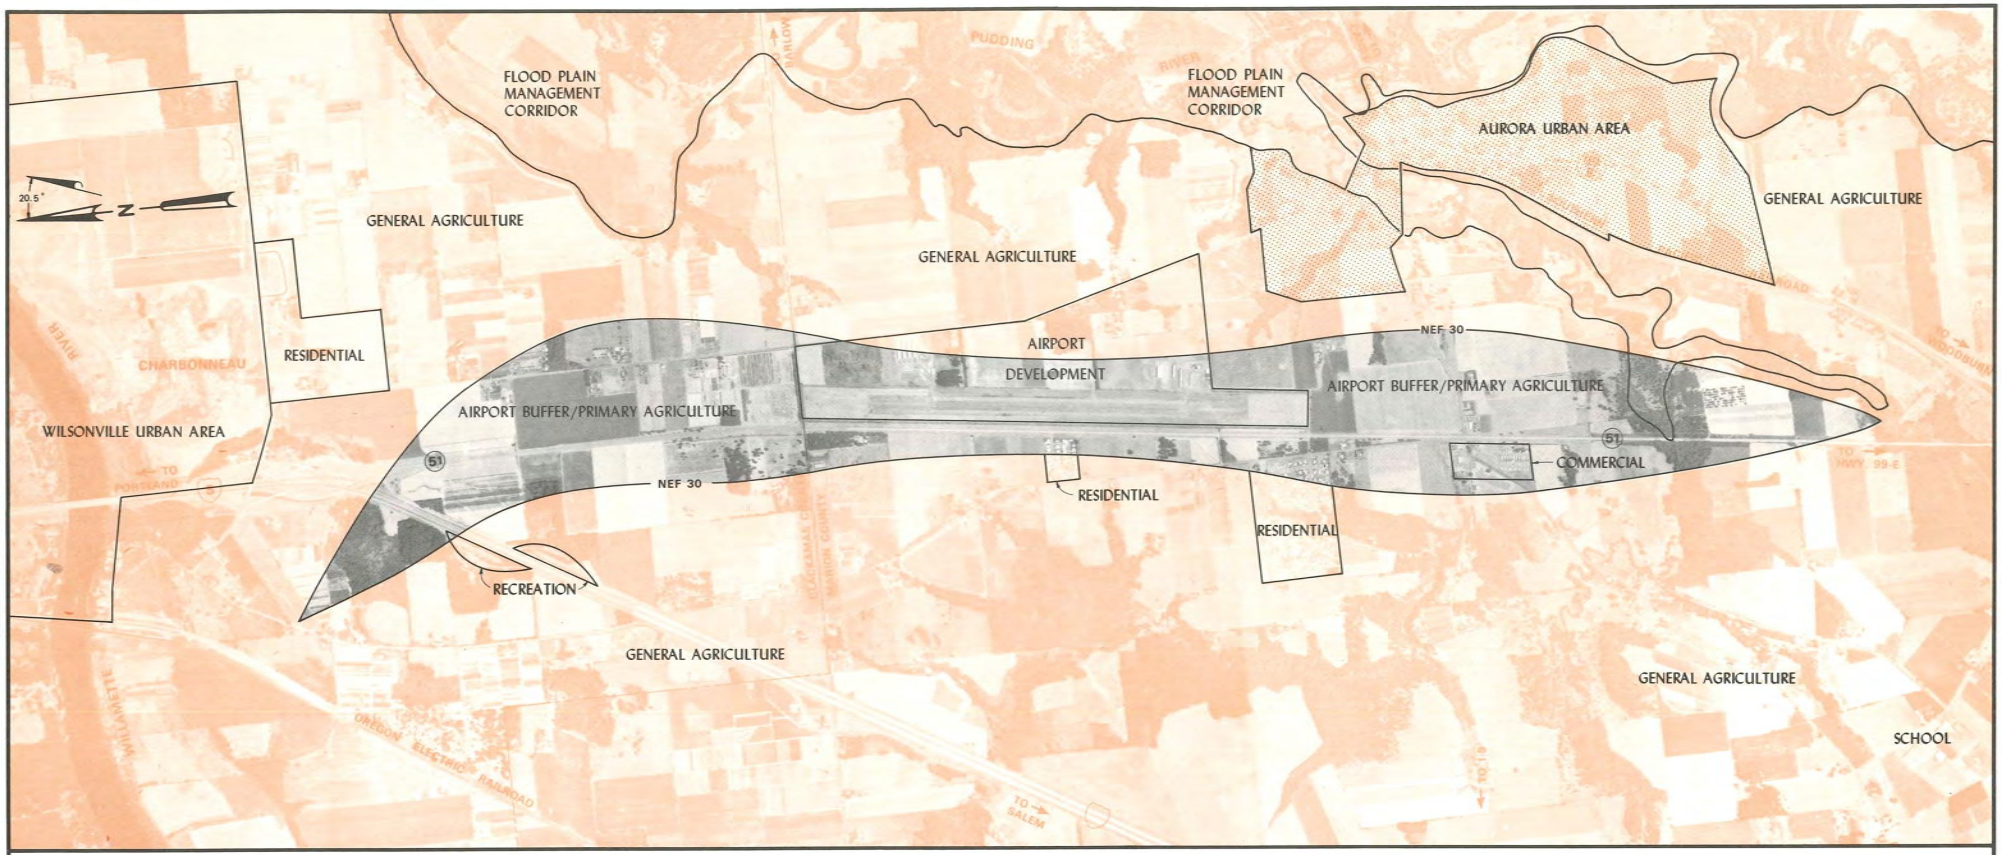
The third zone is an Airport Obstruction Surfaces Overlay Zone. It is an additional overlay superimposed over and surrounding the proposed airport. It is the same as all FAR Part 77 surfaces except the Conical Surface, which is omitted because of being over flat terrain and being very burdensome to administer. These surfaces are shown on Figure 24, Ultimate Airport Imaginary Surfaces, page 33. All surfaces are dimensioned according to FEDERAL AVIATION REGULATIONS, Part 77, Objects Affecting Navigable Airspace.

Other solutions have been considered instead of overlay zones, but they neither provide as complete and clear information nor are they as practical to administer and accomplish. Based upon experience in other parts of the nation FAA recommends overlay zones as the most practical approach after fee acquisition. Fee acquisition is time consuming and unwieldy, expensive for the the airport owner, and reduces the tax base.

As regards the land adjacent to the airport but not directly in either overlay zone the Master Plan encourages both counties to rezone that land. In the airport vicinity in Marion County EFU (Exclusive Farm Use Zone) is suggested. Marion County is currently proposing EFU in zone area number 6, which includes this area. In Clackamas County, EFU or possibly RF-F (Residential Farm-Forest Zone) is suggested.

For additional discussion refer to the letter of 20 April 1976 from CH2M HILL to Marion County regarding rezoning, which is found in the APPENDIX.

Exhibit 5
Page 51 of 70



SUGGESTED LAND USE DESIGNATIONS

COMMERCIAL:

INCLUDES LIGHT INDUSTRIAL, DISTRIBUTION AND FARM AND BUSINESS SERVICE

RESIDENTIAL:

ENCOMPASSES MEDIUM TO HIGH DENSITY RESIDENTIAL AREAS, INCLUDING PROPER OPEN SPACE, RECREATION, UTILITY AND TRANSPORTATION FACILITIES.

URBAN AREAS:

INCLUDES THOSE USES NORMALLY ASSOCIATED WITH URBAN AREA DEVELOPMENT, SUCH AS RESIDENTIAL, COMMERCIAL, INDUSTRIAL AND PUBLIC USES. USUALLY LIMITED TO AREAS WHERE ADEQUATE MUNICIPAL FACILITIES ARE AVAILABLE.

RECREATION:

CONSISTS OF AREAS WITHIN THE FLOOD PLAIN MANAGEMENT CORRIDOR THAT PROVIDE SPORT AND LEISURE OPPORTUNITIES. THE REST AREA ALONG INTERSTATE FIVE IS ALSO INCLUDED.

FLOOD PLAN MANAGEMENT CORRIDOR:

INCLUDES AREA WITHIN 100 YEAR FLOOD PLAIN LIMITS. USES ARE PRIMARILY AGRICULTURAL, FORESTRY, PARK, RECREATION, OPEN SPACES, AND EXTRACTION OF SAND AND GRAVEL.

AIRPORT DEVELOPMENT:

INCLUDES THE ACTUAL FACILITIES OF THE AIRPORT SUCH AS, THE RUNWAY, TAXIWAYS, PARKING APRONS, HANGARS, ADMINISTRATION AND OPERATION BUILDINGS, CLEAR ZONES, ETC. AVIATION RELATED INDUSTRIAL AND COMMERCIAL BUSINESSES ALSO ALLOWED IN APPROPRIATE AREAS.

AIRPORT BUFFER OVERLAY:

ENCOMPASSES AN AREA AROUND THE AIRPORT, BOUNDED BY THE FUTURE NEF 30 CONTOUR, WITHIN WHICH LAND USES ARE DESIGNATED THAT WILL BE MINIMALLY AFFECTED BY AIRCRAFT OPERATIONS AT THE AIRPORT. PREFERRED LAND USES WOULD BE PRIMARY AGRICULTURE AND COMMERCIAL USE LIMITED TO LOW DENSITY CONCENTRATION OF PEOPLE.

PRIMARY AGRICULTURE:

PRIMARILY FOR AGRICULTURAL USES, INCLUDING FARMSTEADS. ADDITIONAL USES PERMITTED ARE RURAL COMMUNITY FACILITIES SUCH AS SCHOOLS, CHURCHES, PARKS, ETC. THESE SHOULD NOT BE ALLOWED UNDER THE AIRPORT BUFFER OVERLAY. EXISTING NONCONFORMING RESIDENTIAL AND COMMERCIAL USES MAY BE CONTINUED BUT SHOULD NOT BE ALLOWED TO EXPAND BEYOND PRESENT LIMITS SHOWN.

GENERAL AGRICULTURE:

GENERALLY FOR AGRICULTURAL USES INCLUDING LARGE FARMS, LOW DENSITY ACREAGE RESIDENTIAL AREAS AND SMALL HOBBY FARMS. ADDITIONAL USES PERMITTED INCLUDE RESIDENTIAL SUBDIVISIONS, PRIVATE COMMERCIAL RECREATION FACILITIES, FARM PRODUCTS PROCESSING OPERATIONS AND SAND AND GRAVEL EXTRACTION.

RECOMMENDED ZONING DESIGNATIONS

0 1000 2000
SCALE IN FEET

AIRPORT DEVELOPMENT ZONE:

PERMITTED USES TO INCLUDE OPERATION OF AN AIRPORT. CONDITIONAL USES TO BE LIMITED TO AVIATION RELATED COMMERCIAL AND/OR INDUSTRIAL BUSINESSES IN APPROPRIATE AREAS WITH RESPECT TO AERONAUTICAL FACILITIES. THERE MUST BE A DEMONSTRATED AVIATION LINK TO COMMERCIAL AND/OR INDUSTRIAL USE IN THIS ZONE.

AIRPORT BUFFER OVERLAY ZONE:

AN OVERLAY SURROUNDING AN EXISTING OR POTENTIAL AIRPORT IMPACT AREA. TO BE SUPERIMPOSED OVER AND USED IN CONJUCTION WITH EXISTING ZONING. IT IS DEFINED BY THE EXISTING OR FORECAST NEF 30 NOISE CONTOUR, WHICHEVER ENCOMPASSES THE LARGEST AREA. THE PURPOSE IS TO PROVIDE FOR USES THAT PRECLUDE CONCENTRATIONS OF PEOPLE. FOR THE AURORA STATE AIRPORT BUFFER ZONE EXCLUSIVE FARM USE (EFU), WITH LIMITED COMMERCIAL AREA, IS RECOMMENDED. THE PERMITTED USES IN THE OVERLAY ZONE OVERRIDE CONFLICTING USES IN THE ZONES BENEATH THE OVERLAY.

AIRPORT OBSTRUCTION SURFACES OVERLAY ZONE

AN ADDITIONAL OVERLAY SUPERIMPOSED OVER AND SURROUNDING THE PLANNED AIRPORT DEVELOPMENT AND DIMENSIONED ACCORDING TO FEDERAL AVIATION REGULATION PART 77, OBJECTS AFFECTING NAVIGABLE AIRSPACE. THE OBSTRUCTION SURFACES ARE SHOWN ON FIGURE 24, ULTIMATE AIRPORT IMAGINARY SURFACES. THE CONICAL SURFACE HAS BEEN EXCLUDED FROM THE OVERLAY SO THAT NO AREA FARTHER THAN 10,000 FEET FROM THE PRIMARY AIRPORT SURFACE IS AFFECTED.

DEVELOPMENT SCHEDULE AND STAGING 43
ECONOMIC FEASIBILITY 45
FINANCING PLAN 45
MANAGING A CONTINUING PROGRAM 46

IMPLEMENTATION PLAN

DEVELOPMENT SCHEDULE AND STAGING

Table 10, Development Schedule, shows the stage development proposed through the short-range (1975-1980), the mid-range (1980-1985), and the long-range (1985-1995), periods.

This follows the requirements developed in AIRPORT REQUIREMENTS and shown on Table 7, page 26. The developments are according to the Airport Layout Plan and are illustrated on Figure 30. It has been assumed that all new pavements will last the duration of this Master Plan period (20 years).

The quantity of work required to match capacity improvements to demand requirements is shown for each item. The quantities are slightly more than demands require at the time specified. Otherwise the owner could construct smaller facilities earlier or more frequently, particularly as regards apron space.

The major development items in Stage I are land acquisition and a parallel taxiway. All land must be acquired initially to insure that the airport remains a complete unit and that the owner has control to carry out the rest of the Master Plan program.

Other major developments are: parking aprons for more than 100 aircraft, based and transient, runway rehabilitation, major airfield lighting, and site development of the terminal area.

During the Stage II development period the runway will be extended 900 feet with MALSF lighting and NDB. This anticipates a demand for more complex aircraft and longer trip distances with resultant greater takeoff requirements. Most of the other improvements are for developing the terminal area.

The timing for Stage III long-range development needs is less definite. The Master Plan calls for a 6000 feet runway at 60,000 pounds S.G. strength and other pavement strengthening. An MLS or equivalent landing system should be added by that time to maintain adequate airport utilization.

Significant additions to the terminal area will include more parking, a control tower, a terminal/administration building, a heliport and a crash/fire/rescue station.

AURORA STATE AIRPORT

DEVELOPMENT STAGING

FIGURE 30

CH2M HILL

ECONOMIC FEASIBILITY

The basis for capital improvements needs has been carefully developed in previous tasks of this study. The safety, capacity, and service benefits to the users have been established. The economic feasibility of including these projects in the Master Plan depends much upon the availability of funds.

Total funds for capital investments over the 20-year forecast period are $3.3 million. A breakdown of these costs is shown in Table 11 in 1975 dollars. Costs are planning capital cost estimates based on industry data. Site characteristics adjustments have been made but without specific engineering design analyses.

Of the total, much of the capital development would be done entirely with federal or with private funds. Most of the remaining work is eligible for FAA cost sharing. The FAA share has been 83.54 percent and may be increased to 90 percent. Oregon State funds required at 83.54 percent funding would be $767,000 or an average of $38,300 for the 20-year period.

The Master Plan accepts this investment level as practical. It also accepts the benefits to the public to be reasonable although it is difficult to determine the distribution of benefits due to the regional impact of the airport.

FINANCING PLAN

The ability to implement the Master Plan depends to a large measure upon the soundness of the airport's financial plan. The Master Plan recommends that the Airport be financially self-supporting.

At such time as there is definite assurance that the Master Plan will be implemented it will be necessary to develop detailed financial and management plans.

Table 12 shows the level of revenues required to meet projected expenses in terms of 1975 dollars. In developing a management program for the airport revenue goals should be established and a program carried out to develop income for the airport.

MANAGING A CONTINUING PROGRAM

These actions are required by the Division of Aeronautics:

- This airport Master Plan should be adopted and implementation commenced immediately.
- Application should be made to the FAA for funds to support the Implementation Plan.
- In order for the State to implement the Master Plan the State needs to control the land involved. Therefore acquisition of the land for the terminal area should be accomplished without delay.
- The parallel taxiway and exit taxiway system must be constructed immediately. This is necessary to protect public safety and to provide adequate runway capacity.
- Other needed developments should be started as indicated by the Master Plan.
- The airport maintenance program should be accelerated, particularly as regards runway pavement rehabilitation and airfield surface drainage improvements.
- The State should continue to work closely with Marion and Clackamas Counties to develop compatible land use planning.
- The State should work closely with Marion and Clackamas Counties to develop zoning changes on and near the airport as recommended by the Master Plan.
- At this time no appropriate alternatives for airport ownership seem to exist. The State should retain ownership of the airport because its closure would have a critical adverse impact on the Oregon Aviation System.
- The State should take a more active part in the management of the entire airport and particularly give more attention to user service and problems.
- The State should develop an airport management program and increase its airport staff as necessary to administer the airport operation and development program.
- The State's financial policy should be to make the airport more self-supporting. This should be accomplished by obtaining more direct control of the sources of airport revenues. Revenues should be increased in accordance with area competition and inflation rates. Lease rates should be reviewed frequently and kept up-to-date.
- Airport traffic surveys should be made periodically and incorporated into the Master Plan and the Oregon Aviation System Plan.
- A program to collect weather data should be initiated and used for facility planning.
- The State should schedule periodic reviews of the Master Plan. It should be revised whenever necessary to keep it current.
- In updating the Master Plan the State should work closely with the airport users, local governments, and citizens. A flexible attitude and approach to the planning process should be maintained.
- Also it is important to keep the public and public agencies informed as to what impacts off-airport plans may impose on this public facility. Also it is important to provide encouragement and assistance to other agencies having jurisdiction over matters that affect this airport.

Attention: Mr. Roy Raasina

Dear Paul:

We have completed our review of the Site Sufficiency Study and Summary of Findings for Aurora State Airport transmitted by your letter of November 25, 1975.

This study assembles the best available information on airport sites in the vicinity of the existing Aurora State Airport, and it has been concluded that the existing airport should be tentatively approved for initial development as a utility airport conditioned on approval of an airport layout plan.

This tentative approval is necessary because there have been no previous ADAP or FAAP grants at this location. Tentative approval of the site permits the PGP project to proceed to the airport layout plan phase which will determine the precise nature of future development including the potential for ultimate development as a transport airport. This approval also establishes eligibility of the site for federal funds under the ADAP program.

This approval does not indicate that airport development at the site is environmentally acceptable in accordance with the National Environmental Policy Act of 1969 (P.L. 91-190) and does not imply any commitment of federal funding.

Sincerely,

for George L. Bulley

Marion County Board of Commissioners
Marion County Courthouse
Salem, OR 97301

Gentlemen:

Thank you for the privilege of presenting the Aurora State Airport Master Plan Final Draft at your regular meeting this date.

Representatives of state, your county and city planning departments have been members of the Advisory Committee during the planning process, and in addition to personal contact with our staff and planners, they have had opportunities to review the draft plan and submit comments. Two Planning Advisory Committee meetings have been held in Salem and two public meetings in North Marion County. All comments received to date have been reviewed, considered and incorporated in this Revised Final Draft.

It is of great importance that we receive your comments on this draft so they may also be considered in the final report. Our goal is to complete a comprehensive master plan for the airport which will assist us in developing a facility to meet the aeronautical needs of the area. We consider this airport to be of great importance, not only locally within its immediate environs, but on a regional, state-wide and national basis.

The plan is scheduled for final printing on or about the 21st of April and submittal to the FAA soon thereafter. It is of much concern to our Division and the FAA that the land use and environmental aspects of the plan are in reasonable and acceptable conformity with your county's comprehensive plans. Should you or your planning staff require additional assistance in review of the plan prior to your submittal of comments, please notify us in order that our planners will be ready to clarify any subject matter in the plan that may be questionable or unclear to you.

A DIVISION OF THE DEPARTMENT OF TRANSPORTATION
A MEMBER OF NATIONAL ASSOCIATION OF STATE AVIATION OFFICIALS

Your assistance and comments in finalizing this plan will be greatly appreciated.

Sincerely,

PAUL E. BURKET,
Aeronautics Administrator

20 April 1976

C9198.70

Mr. Randy Curtis
Marion County Planning Department
3180 Center Street N. E., Room 230
Salem, Oregon 97301

Dear Mr. Curtis,

Subject: Zone Change Case No. 76-8
Woodburn-Hubbard Area-Wide Rezoning

As mentioned in the letter of 13 April 1976 from the Oregon Aeronautics Division, I am submitting comments on the subject rezoning. Our comments pertain strictly to the Aurora State Airport and its master plan, for which CH2M HILL is consultant to the Aeronautics Division, owner.

The airport master plan's purpose is to identify airport needs and to determine practical solutions to satisfying those needs with minimum impact upon the airport environs. The master plan identifies traffic growth projections through 1995 and establishes facilities layouts, schedules and budget requirements for airport development through that period. It also sets forth recommendations for zoning on the airport and for zoning and land use around the airport, particularly where measurable impacts are predicted to occur.

The revised final draft of the Aurora State Airport master plan is in the hands of the Marion County Commissioners and was most recently discussed at the Commissioners' hearing 31 March 1976. No subsequent revisions have been made.

The recommendations of the airport master plan are a result of analysis of the on-airport needs of future air traffic and analysis of the off-airport impacts of this traffic. The recommendations for layout development and airport and air traffic management, if carried out, will minimize but will not altogether eliminate impacts.

In order to minimize impacts, which will be mostly from aircraft noise, and to make airport and adjacent land use compatible, the following comments relate the airport master plan to Case No. 76-8, Woodburn-Hubbard Area-Wide Rezoning.

1. The present airport zone, Public Amusement (PA), is inappropriate because permitted uses are incompatible with a publicly owned and operated airport. Also the term "amusement" is a misnomer and is misleading. The Oregon Aeronautics Division is not operating an amusement facility. In fact, both the national and state departments of transportation identify the Aurora State Airport as a vital link in the national and state air transportation systems. We suggest that Marion County adopt the airport master plan recommendation for an Airport Development Zone (or similar such term) described as follows:

   > Permitted uses to include operation of an airport. Conditional uses to be limited to aviation related commercial and/or industrial businesses in appropriate areas with respect to aeronautical facilities. There must be a demonstrated aviation link to commercial and/or industrial use in this zone.

   The dimensions recommended in the airport master plan are slightly larger than those shown on the proposed rezoning map. Adoption of the master plan recommendations will both protect the airport and will prevent non-aviation commercial development in the airport development zone. As minimum rezoning the zoning of the Aurora State Airport should at least match that of the other public airport in Marion County, McNary Field. It presently does not.

2. Increased densities of residential development or concentrations of people should be discouraged off the runway ends for the citizens' own well being because of the potential noise exposure forecasts explained in the airport master plan. Fortunately, existing land use is generally compatible with operation of the airport and would be further improved by the proposed F-20 rezoning. However, we would prefer the rezoning to be FFU for still better compatibility. We continue to recommend that the airport buffer zone be identified and defined by an Airport Buffer Overlay Zone, described in the master plan as follows:

An overlay surrounding an existing or potential airport impact area to be superimposed and used in conjunction with existing zoning. It is defined by the existing or forecast NEF 30 noise contour whichever encompasses the largest area. The purpose is to provide for uses that preclude concentrations of people in the Aurora State Airport Buffer Zone. Exclusive farm use (EFU) with limited commercial area is recommended. The permitted uses in the overlay zone override conflicting uses in the zones beneath the overlay.

3. Additionally, the airport master plan proposes an Airport Obstruction Surfaces Overlay Zone to restrict construction of high objects hazardous to flight and thus to public safety. The suggested overlay zone is defined in the airport master plan as follows:

An additional overlay superimposed over and surrounding the planned airport development and dimensioned according to Federal Aviation Regulation Part 77, Objects Affecting Navigable Airspace. The obstruction surfaces overlay shown in the master plan match imaginary surfaces for the ultimate airport without the conical surface. No area farther than 10,000 feet from the airport primary surface is affected.

The failure of Marion County to adopt this overlay zone would expose the county population to little adverse impact, but inaction would expose the most potential for restricting safe flight operations near the airport during low visibility weather.

The zoning and land use recommendations in the Aurora State Airport master plan are provided to assist Marion and Clackamas counties to maintain compatible land use in the vicinity of this busy, growing public airport. While these recommendations may not be the only solutions, they were developed through analysis by the study team and through the citizen involvement process and are the preferred solutions. They are also based upon precedents established at other public airports and are recommended by the Federal Aviation Administration as being highly successful, tested solutions.

Thank you for this opportunity to submit these comments. Please feel free to contact Roy Rancine of the Oregon Aeronautics Division or me if you have any questions.

Yours very truly,

Malcolm R. Miner

Salem, OR 97301

Gentlemen:

Aurora State Airport Master Plan,
Coordination with Local Governments

In continuation of our coordination with local governments on this project, this letter is to inform you that the Aurora State Airport Master Plan will be published shortly. Elected officials and State planning staffs of the jurisdictions involved, as well as local citizens, have received information from the Airport Master Plan including discussion of impacts on areas surrounding the airport. The plan presents recommendations as to how local governments may use the Airport Master Plan to their advantage in local planning.

At this time, the airport master planning process is nearing completion. The latest document, the revised final draft plan dated March 1976, was formally presented to you March 31, 1976. It is the result of approximately one year's study by the Consultant, who was monitored by the staff of the Division of Aeronautics and the multi-agency Advisory Committee. The Citizen Involvement Program and the coordination with interested local governments also provided significant input into the plan.

The study's development process included many review and coordination meetings and presentations. A list of such meetings and press releases is attached. Notices of master plan meetings were published in 13 newspapers, and through United Press International and Associated Press. Notices were also sent out for bulletin boards at ten airports including Aurora. Approximately 250 citizens have attended the public meetings, and the Advisory Committee representing the

following organizations has been in close contact with the study throughout.

Aurora Planning Commission
Clackamas County Planning Department
Columbia Region Association of Governments (CRAG)
Oregon Department of Environmental Quality (DEQ)
Oregon Division of Aeronautics
Federal Aviation Administration
Land Conservation and Development Commission (LCDC)
Marion County Planning Department
Mid-Willamette Valley Council of Governments
Oregon Department of Transportation (ODOT)
Port of Portland
Soil Conservation Service, U.S. Department of Agriculture

We believe there is adequate assurance that all important issues have been addressed and that all interested parties have had opportunity to provide comments.

Final planning coordination according to LCDC requirements has been accomplished with all concerned units of local government. According to procedures advised by LCDC, the Oregon Division of Aeronautics, airport owner, has presented the revised final draft Airport Master Plan to all affected local governments. The Plan has been explained, questions answered, and comments have been invited. Efforts were made for the study team to attend work sessions with local government staffs.

It is the hope of the Division of Aeronautics to see the Aurora State Airport Master Plan recognized and taken under advisement by surrounding jurisdictions as they develop their comprehensive plans. We recommend that you adopt the Aurora State Airport Master Plan as an element in your comprehensive plan, at least on an interim basis. We also anticipate that your local government will keep the Airport Master Plan recommendations under advisement and maintain close coordination with the Division of Aeronautics in any action affecting this important public airport.

We trust that Marion County will take prompt action to adopt airport zoning recommendations contained in the Plan. This will assist greatly in reducing the confusion regarding current development plans and will permit land owners to properly plan development of their property in conformance with public interests. Proper zoning will assure protection of the airport through continued compatible land use. (Please refer to CH2M-Hill's letter of 20 April 1976 to Randy Curtis, Planning Director, regarding Zone Change Case No. 76-8, copy attached.)

Whereas announced in our letter to you dated March 31, 1976 our intentions to print the Airport Master Plan report about 20 April, we understood that you needed a little more time for review. However, more than 45 days have elapsed since the Plan was presented to you and we are now well behind our programmed printing schedule. Neither comments nor requests for further information have been received. Airport tenants, users and neighbors are being somewhat adversely affected by the delays being experienced, and further delays can only add to the total cost of the project.

Since no communications have been received from you, we have scheduled presentation of the Plan to the Oregon Transportation Commission at its regular meeting on May 21, 1976. Following their acceptance of the plan the final document will be printed and it should be available in early June.

We look forward to receiving your response indicating your acceptance of the Plan, at least on an interim basis or with qualifications, so this planning study may be brought to an orderly conclusion. We also anticipate continuing communications with you for necessary refinement, updating and implementation of the Plan and sincerely thank you for your past cooperation.

Sincerely,

PAUL E. HORSET,
Aeronautics Administrator

FEDERAL AVIATION ADMINISTRATION

ADDRESS REPLY TO:
FAA BOEING FIELD/KING COUNTY INTL AIRPORT
SEATTLE, WASHINGTON 98108

Mr. Paul Burket, Administrator
Aeronautics Division
Oregon Department of Transportation
3040 25th Street Southeast
Salem, Oregon 97310

Dear Mr. Burket:

The Aurora State Airport Layout Plan received May 24, 1976, is conditionally approved and a copy is enclosed. The plan appears to be excellent in both format and content, and we accept it as compliance with the Grant Agreement dated May 5, 1975.

Approval of the plan does not indicate that the United States will participate in the cost of any development proposed other than that which is presently programmed. When airport construction, alteration, or deactivation is undertaken, such action requires notification and review in accordance with the provision of either Part 77 or Part 157 of the Federal Aviation Regulations.

This approval considers only the safety, utility, and efficiency of the airport, and it is conditioned on acceptance of the plan under local and state land use laws. Please provide documentation which indicates that the plan is acceptable for use by all local agencies with jurisdiction over area-wide planning and land development controls. We encourage the appropriate agencies to adopt land use and height restrictive zoning ordinances based on this plan in a timely manner since action toward this end is a prerequisite of the Airport Development Aid Program (ADAP).

The approval indicated by my signature is given subject to the condition that portions of the proposed land acquisition and the runway extensions may not be undertaken without prior written environmental approval by the FAA in accordance with Order 5050.2B.

SUMMARY OF MEETINGS

Date: 2 July 1975
Where: Salem, Oregon
Who: Advisory Committee
Purpose: To start up the project, to discuss the initial inventory findings, to invite the Advisory Committee to provide input to the project and to outline the procedures for so doing.
Attendees: Oregon Division of Aeronautics, CH2M HILL, Oregon Department of Transportation (ODOT), Marion County Planning Department, Clackamas County Planning Department, Aurora Planning Commission, Columbia Region Association of Governments (CRAG), Mid-Willamette Valley Council of Governments (COG), Oregon Land Conservation and Development Commission (LCDC), Port of Portland and U.S. Department of Agriculture, Soil Conservation Service (USDA, SCS).

Date: 24 October 1975
Where: Salem, Oregon
Who: Advisory Committee
Purpose: To review the first interim report, "Airport Requirements" and to obtain comments.
Attendees: Division of Aeronautics, CH2M HILL, Aurora Planning Commission, Marion County Planning Department, Federal Aviation Administration (FAA), Mid-Willamette Valley COG, CRAG, Port of Portland, Oregon Department of Environmental Quality (DEQ), ODOT, USDA, SCS and LCDC.

Date: 18 November 1975
Where: North Marion Union High School, Hubbard, Oregon
Who: Public Meeting
Purpose: To review the interim report, "Airport Requirements," to discuss the adequacy of the existing airport site, and to get public input. The meeting was announced through press releases to UPI, AP; it was advertised in 15 local newspapers; and notices were furnished for bulletin boards at ten airports. Approximately 75 citizens attended.

Date: 25 February 1976
Where: Salem, Oregon
Who: Advisory Committee
Purpose: To review the final draft of the Airport Master Plan and to obtain comments for incorporation into the final report.
Attendees: Division of Aeronautics, CH2M HILL, LCDC, USDA, SCS, ODOT, Port of Portland, Marion County Planning Department, and the DEQ.

Date: 26 February 1976
Where: North Marion Union High School, Hubbard, Oregon
Who: Public Meeting
Purpose: To present and discuss the final draft of the Airport Master Plan and to obtain public input. The presentation was made by the Division of Aeronautics, the Federal Aviation Administration, and CH2M HILL.
Attendees: Approximately 50 citizens

Date: 4 March 1976
Where: Salem Airport, Salem, Oregon
Who: The LCDC/Marion County representative, Oregon Division of Aeronautics, and CH2M HILL.
Purpose: To verify the LCDC coordination requirements under the 1973 Land Use Act (ORS Chapter 197) and to insure that they are adequately met under the project.

Date: 31 March 1976
Where: Marion County Courthouse, Salem, Oregon
Who: Marion County Commissioners and Public
Purpose: To present the final draft Airport Master Plan and to finally coordinate with Marion County local government.
Attendees: Two County Commissioners, Marion County planning staff, and approximately five citizens.

Date: 5 April 1976
Where: Wilsonville, Oregon
Who: City Council and Public
Purpose: To present the final draft Airport Master Plan and to coordinate with the City Council and attending public.
Attendees: Four City Councilmen, Mayor, City Administrator and approximately 25 citizens.

Date: 6 April 1976
Where: Aurora, Oregon
Who: City Council and Public
Purpose: To present and coordinate the final draft Airport Master Plan with the City of Aurora.
Attendees: Three City Councilmen, Mayor, Chairman of the Planning Commission, the Section 208 study team and approximately 25 citizens.

Date: 9 April 1976
Where: Clackamas County Courthouse, Oregon City, Oregon
Who: County Commissioners and Public
Purpose: To present and explain the final draft of the Airport Master Plan to the Clackamas County Commissioners.
Attendees: Approximately 20 citizens. No County Commissioners or County staff attended.

Date: 25 May 1976
Where: Salem, Oregon
Who: Oregon Transportation Commission
Purpose: During this regular monthly Commission meeting the Aurora State Airport Master Plan was unanimously approved by the Commission.
Attendees: Full Commission, ODOT officials including Aeronautics Division, CH2M HILL, and spectators.

TECHNICAL DATA

AURORA STATE AIRPORT MASTER PLAN

REPORT OF SITE SUFFICIENCY STUDY

November 1975
By CH2M HILL

INTRODUCTION

The Airport Master Plan work program includes Task G, Site Sufficiency Study. It is a logical conclusion to Phase I work, Airport Requirements, and is required to be submitted to FAA prior to proceeding to Phase III work, Airport Plans.

RECOMMENDATION

The conclusions of this study are that the existing Aurora State Airport site is adequate and that the airport should not be relocated.

PURPOSE

The purpose of this study was first to review the adequacy of the present airport site in light of the needs and impacts developed in previous tasks of the Master Plan.

Second, it includes locating alternative airport sites and comparing them to the present site. The objective of this study is either to recommend to continue using the present airport or to advise investigating alternative sites for a replacement airport.

METHOD

This analysis has been conducted primarily in the office using base data gathered for other tasks and using analyses developed in previous tasks. Limited aerial and ground inspection was made of alternative sites.

The first step of the study was to establish the factors or items upon which to evaluate the airport's adequacy. The procedure for site investigation followed FAA Order NW 5030.1, Airport Site Investigation and Approval; FAA advisory Circular 150/5060-2, Airport Site Selection, and FAA advisory circulars specifying airport planning and design criteria.

Next the existing airport and existing airport site were rated. For this purpose the data from and the findings of Phase I, Airport Requirements, were used.

The final step of the analysis was to identify and compare alternative sites to the present airport. Basic to the identification of alternative sites is identifying the size and boundaries of the area within which alternative airport sites could be considered.

Three main factors influenced this determination. First, an alternative airport site must be able to conveniently serve the same service area that Aurora State Airport serves. Second, within that service area, physical factors must suit airport development and operation. And third, the location of an alternative airport site should be generally convenient to the same access routes as the Aurora State Airport, and should not be considerably closer to another airport. Impacts were examined after sites were chosen.

Consideration was given to operational factors, airspace, navigational aids, physical and engineering factors, area for development, land values, economic factors, and environmental and land use planning aspects. In establishing and identifying alternative airport sites, the Basic Transport airport category was used. Although prior tasks indicate that one runway will suffice for the 20-year period, it was thought that the site should provide adequate space for a short parallel runway, if practical. All sites including the existing airport site would permit this.

FINDINGS

Basically, analysis of the adequacy of the Aurora Site and the evaluation of the alternative sites resulted in a determination that the present Aurora State Airport should continue to fulfill the present airport function. First, the Aurora State Airport has no serious or insurmountable problems. It is well engineered and meets operational criteria. Expansion to meet forecast needs appears feasible.

Airport use is in accordance with compatible land use and the existing airport has minimum environmental impacts. Also, the site has been an airport continuously for 32 years. It has been accepted by the City of Aurora in their Draft Land Use Plan as well as by the Marion County Comprehensive Plan. In a public meeting 18 November 1975, a discussion of this matter indicated unanimous concurrence of those attending to retain the present airport rather than to relocate.

Adequate services are presently being provided by fixed base operators and a considerable hardship on operators and on users could be expected if the airport were to be closed or relocated. As regards land available for development area, there is adequate area just east of the existing runway. Acquisition problems appear to be less for a new airport than elsewhere because of the lack of zoning conflicts at the existing airport as opposed to the need to rezone for a new airport.

As regards economic factors, the cost in developing a new airport could be expected to be significantly higher than that of improving an existing airport. an exact dollar amount, however, cannot be determined because of lack of detailed engineering data and because of uncertainties regarding the cost of land. However, it can be assumed that land values would be approximately the same for all areas. In the case of Aurora State Airport, considerably less acreage (approximately 52 acres) is required, so that even if cost per acre were to be higher, total land cost would be less. A sample comparison is shown below using about $5,000 per acre for land acquisition.

COMPARISON OF APPROXIMATE COSTS*
ESTIMATED FOR 1995 AIRPORT NEEDS

Item	Existing Airport	New Site
Land Acquisition	$ 260,000	$ 830,000
Site Preparation	160,000	250,000
Pavement	540,000	800,000
Lighting	90,000	90,000
Miscellaneous	90,000	120,000
Non-ADAP Items	310,000	600,000
Total Cost Estimate	$1,450,000	$2,690,000

*Using cost estimating methods similar to Oregon Aviation System Plan -- to be refined in Phase III.

Three alternative airport sites were evaluated.

The first alternative site considered is located close to the existing Aurora Airport in northern Marion County. This site is designated as the Freeway Site, as it is located beside the freeway. Possibilities for development here include: to the east of the freeway, a single runway, or to the west of the freeway, two runways.

The second alternative site is located in Clackamas County and is designated as the Clackamas Site. It is that site slightly southeast of the City of Aurora, and lies about 2 miles north of the Lenhardt Airprt. This site includes an area large enough to permit considerable shifting of the runway location and would easily permit development of a parallel runway.

The third alternative site is that shown to the south of the first site. It is located near the City of Hubbard and is designated as the Hubbard Site. It also occupies a sufficient space to permit development of a parallel runway.

All three alternative sites near the Aurora State Airport are generally in the same kind of geographical region. Rural population densities are generally similar and the primary business is agriculture. The same general surface transportation networks serve all three airports. However, the Clackamas Site is somewhat less convenient to major highways. All sites are located in areas designated as Agricultural Use in County Comprehensive Plans.

Topographic features of all sites are generally similar. The area lacks terrain obstructions, is generally level with slow surface runoff, has generally similar good agricultural soil types, and experiences the same general metereological and climatological conditions as for the Aurora State Airport. Engineering problems appear to be about equal for all airport sites and utilities appear to be more or less equally convenient as regards electricity and water. However, approval for waste treatment facilities at new sites will give some problems because of the difficulty of soils meeting the requirements of the DEQ for septic disposal.

In all cases, runway orientation is generally north-south, with a slight shift to the southwest to allow for southwest winds during wintertime cold front passage. Experience at the Aurora State Airport indicates that this orientation would be favorable.

A part of the evaluation of alternative sites included evaluating the effort necessary to develop the alternative site to the condition that exists at the present airport. This would be mainly acquisition of land, grading and paving a General Utility category runway. A second part of the evaluation considered development needed through 1995.

By far the most significant problem at alternative sites would be that of obtaining permission to use the land as an airport. This would necessitate changes in either County Comprehensive Plan. Comprehensive Plans require considerable justification before they can be changed, and public sentiment demonstrated at recent meetings does not indicate support for a new airport (examples are several meetings held in 1975 by the Port of Portland regarding the Portland-Clackamas Airport Study and a meeting held 18 November 1975 to present and discuss the work accomplished by Phase I of the Aurora State Airport Master Plan). Another problem is in actually acquiring the land. This would probably necessitate condemnation and costs could run very high (in the range of $500,000 to $1 million). As shown earlier, development costs would be about double for a new airport.

All of the alternative sites have certain advantages, but they also have disadvantages. One principal disadvantage is the time required to acquire and develop an airport. Another is the high costs anticipated. Another problem is that in moving away from the Aurora State Airport it would probably be necessary to sell the present property and discontinue its use as an airport. This would undoubtedly cause a hardship on the operators presently based at the airport and might create the need to provide relief to them. As regards the Clackamas Site, the people in Clackamas County have already rejected a proposed new airport in that county. Furthermore, the Clackamas site development might necessitate closing the Lenhardt Airport.

On the other hand, the advantage common to all alternative sites is that a fresh new airport could be developed starting with present-day knowledge of needs and present-day criteria. This would permit more flexibility in the development program for the future.

The following Site Comparison Matrix summarizes why it was concluded advisable to retain the airport at the present site. Mainly the benefits do not appear to warrant the costs.

Note: The above matrix table and an illustration showing the sites compared are shown on page 28, Figure 22, Alternative Airport Sites.

Notes

Horizontal datum is NAD 1983, vertical datum is NAVD88.
The Airport is flat. Elevations / ground contours vary by less than 5 feet and are not shown. Drainage features are typically 2-3 feet lower than adjacent land.
Building restriction line is based on a 35-foot building located 495 feet from the runway centerline not penetrating FAR Part 77 surfaces for the Airport.
A Residential Through The Fence (RTTF) access exists at hangar #64 at the Wylee Condominium Association. The tenant is the resident caretaker for the airport.

Modifications to Standards

	Standard Being Modified	Proposed Action
1	Advisory Circular (AC) 150/5300-13, para 307 (Runway Object Free Area)	The standard runway object free area (OFA) for Airport Reference Code C-II airports is 800 feet. Highway 551 runs north/south parallel to Runway 17/35; the approximate distance from the Runway 17/35 centerline to the Highway 551 centerline is 400 feet. As the airport geometry is not changing from the current condition, the Oregon Department of Aviation (ODA) requests a modification of the OFA design standard to allow the runway and highway to remain in their current positions.
2	AC 150/5300-13, Appendix 14 (Declared Distances)	The ODA requests the existing threshold for Runway 17 be referenced in determining FAR Part 77 surfaces and design standard surfaces referenced in AC 150/5300-13 (*i.e.*, RSA, RPZ, OFA, OFZ).

FLIGHT STRIP EASEMENT

VOL. 279 PAGE 91

KNOW ALL BY THESE PRESENTS That we, the undersigned, are the owners in fee simple of the following described real property, to-wit:

PARCEL #1. A parcel of land lying in the south half (S½) of Section 2, Township 4 South, Range 1 West, W. M., Marion County, Oregon, the said parcel being all that portion of the grantor's property lying east of the 600 foot width flight strip and being described as follows:

Beginning at the east quarter corner of said Section 2; thence west along the east and west center line of said Section 945 feet to the east line of the said flight strip; thence South 7° 08' West along said east line 2129 feet to the south line of the grantor's property; thence east 1205 feet to the east line of Section 2; thence North 2112 feet to the point of beginning.

PARCEL #2. All that portion of the grantor's property lying between the westerly right of way line of the West Portland-Hubbard Highway and the existing County Road and being more particularly described as follows:

Beginning at the intersection of the east and west center line of said Section 2 and the westerly right of way line of said highway; said intersection being 1752 feet west of the east quarter corner of said Section 2; thence west along said east and west center line 1154 feet to the center of said County Road; thence southerly along the center of said Road 2165 feet, more or less, to the south line of the grantor's property; thence east along said south line 625 feet to the westerly right of way line of said highway; thence North 7° 08' East along said right of way line 2129 feet to the point of beginning.

AND, WHEREAS, the United States of America has designated and established a flight strip for the use and benefit of aircraft, all or a portion of which flight strip is in the vicinity of the property above described; and

WHEREAS, the undersigned desire to cooperate with the United States of America and the State of Oregon to the extent and in the manner hereinafter set forth in the creation and development of said flight strip and the area required therefor.

THEREFORE, we, the undersigned, in consideration of the sum of Four Hundred fifty five and —20/00 Dollars, receipt of which said sum hereby is acknowledged, do for ourselves, our heirs, successors and assigns, grant to and vest in the United States of America and the State of Oregon the right, privilege and license to use the space over the real property hereinabove described for the use and benefit of aircraft; and we further grant to the United States of America and the State of Oregon the right to limit, control and remove obstructions extending in space above the hereinafter defined inclined plane.

We, the undersigned, hereby covenant and agree for ourselves, our heirs and assigns as a covenant binding the above described real property and for the benefit of the United States of America, the State of Oregon and the said flight strip that no building, structure, object, obstruction or other thing shall be erected, placed or maintained on the above described real property or any part thereof [illegible] which shall extend above the hereinafter

VOL 279 PAGE

EXHIBIT D

The said inclined plane directly above Parcel #1 of said real property, the southeast corner of which plane has an elevation of 192 feet, the southwest corner of which has an elevation of 190 feet, the northeast corner of which has an elevation of 327 feet, and the northwest corner of which has an elevation of 192 feet, and which plane has also the following elevations:

The said inclined plane is the space directly above Parcel #2 of said real property, the southeast corner of which plane has an elevation of 218 feet, the southwest corner of which has an elevation of 312 feet, the northeast corner of which has an elevation of 220 feet, and the northwest corner of which has an elevation of 385 feet, and which plane has also the following elevations:

The above elevations refer to the standard datum established by the U. S. Coast and Geodetic Survey (1929 Adjustment).

We, the undersigned, further covenant and agree that the State of Oregon and/or the United States of America and/or their assigns shall have and hereby are given the right, through their respective officers, agents, contractors, or representatives to enter from time to time upon the said described real property and to trim, cut, and/or fell trees or other natural growth which may extend above, or within any period of five years could reasonably be anticipated to extend above, the said inclined plane. All trees or other natural growth cut or felled by the grantee shall remain the property of the grantors and may be removed at the option and convenience of the owners.

We further covenant and agree that we, at our own expense, will remove or alter any buildings, structures, objects, obstructions or other things other than trees or natural growth and other than telephone, telegraph, power lines or other utility facilities which are now on said real property, [illegible] of the [illegible]

VOL. 219 PAGE 95

TAXIWAY ACCESS EASEMENT

For value received, the STATE OF OREGON, acting by and through its Department of Aviation, **Grantor**, hereby grants to TLM HOLDINGS, LLC, an Oregon limited liability company, **Grantee**, its successors and assigns, an easement on and over the Grantor's real property more particularly described in the attached Exhibit A (the "**Burdened Parcel**") across the Taxiway Obstacle Free Area (OFA), as defined by the Federal Aviation Authority (FAA) and shown on the attached Exhibit B, subject to FAA regulations and temporary restrictions for construction purposes and aircraft operations in the OFA for access to Grantor's taxiway from and to the real property of Grantee more particularly described in the attached Exhibit C (the "**Benefited Parcel**");

TOGETHER WITH the right of Grantee to allow its licensees to use the easement granted above for access to Grantor's taxiway from and to the Benefited Parcel, subject to FAA regulations and temporary restrictions for construction purposes and aircraft operations in the OFA;

TOGETHER WITH the right of Grantee and Grantee's successors and assigns to construct improvements within the OFA at Grantee's sole expense, subject to Oregon Department of Aviation approval and Grantee's compliance with FAA design standards; and

TOGETHER WITH the right of Grantee and Grantee's successors and assigns to construct aviation-related improvements in the "transition area" shown on attached Exhibit B, subject to FAA review and Grantor's determination that such improvements do not have a negative effect on Grantor's airport or airport operations.

Grantor shall not unreasonably withhold its approval, and shall diligently seek approval by FAA, of Grantee's proposed improvements in the OFA and the "transition area" shown on Exhibit B.

Grantee shall indemnify and hold Grantor harmless against any damages, claims, liabilities, costs or expenses arising out of any act or omission of Grantee, its licensees, successors or assigns, in connection with Grantee's activities under this easement. To the

extent permitted by Article XI, Section 7 of the Oregon Constitution, and subject to the limits of the Oregon Tort Claims Act, ORS 30.260 through 30.300, Grantor shall indemnify and hold Grantee harmless against any damages, claims, liabilities, costs or expenses arising out of any act or omission of Grantor, its successors or assigns, in connection with Grantor's activities under this easement.

At Grantor's election, all rights granted under this easement will cease and the easement will terminate if Grantee fails for a period of five consecutive years to engage in any of the activities permitted under this easement. In such event, Grantee shall cooperate with Grantor in executing and recording any instrument necessary or useful for extinguishing this easement.

This easement is subject to all prior easements or encumbrances of records affecting the Burdened Parcel.

This easement is appurtenant to the Benefited Parcel and the benefit of this easement is intended to run with the Burdened and Benefited Parcels, including any division or partition of them, and to be binding upon the heirs, successors and assigns of Grantor and Grantee with respect to these Parcels.

Failure of either party to comply with any term or condition or fulfill any obligation of this easement agreement within 20 days after receiving written notice from the other party specifying the nature of the failure with reasonable particularity is a default. Upon default by either party, the other party may seek such remedies as may be available under applicable law or in equity including (without limitation) the remedies of injunction and specific performance.

No provision of this easement agreement may be deemed to have been waived unless the waiver is in writing signed by the waiving party. Otherwise, no modification or amendment of any provision of this easement agreement is binding on Grantor or Grantee unless signed by both Grantor and Grantee and recorded in the Marion County, Oregon real property records. Failure at any time to require performance of any provision of this easement agreement does not limit Grantor's or Grantee's right to enforce the provision. Any waiver of any breach of any provision is not a waiver of any succeeding breach or a waiver of any provision of this easement agreement.

Communications made pursuant to this easement agreement are effective when actually delivered or when delivered by facsimile or when deposited in the United States mail, certified or registered mail, correct postage prepaid and addressed to Grantor and Grantee as follows:

Grantor: The Oregon Department of Aviation
3040 25th St. SE
Salem, OR 97302-1125
Fax: (503) 373-1688

Grantee: TLM Holdings, LLC
14355 Keil Rd NE, Suite 11
Aurora, OR 97002
Fax: (503) 678-6204

Any party may change its address for notices by written notice to the others in the manner set forth above.

AGREED TO this 29 day of August, 2007.

DECLARATION SUBMITTING
SOUTHEND CORPORATE AIRPARK CONDOMINIUM
TO CONDOMINIUM OWNERSHIP

THIS DECLARATION, pursuant to the provisions of the Oregon Condominium Act, is made and executed by **YELLOW GATE CORPORATE HANGARS LLC**, an Oregon limited liability company ("**Declarant**").

Declarant proposes to create a condominium to be known as Southend Corporate Airpark Condominium, which will be located in Marion County, Oregon. The purpose of this Declaration is to submit the property described in Article 2 below to the condominium form of ownership and use in the manner provided by the Oregon Condominium Act.

NOW, THEREFORE, Declarant does hereby declare and provide as follows:

Article 1

DEFINITIONS

When used in this Declaration the following terms shall have the following meanings:

1.1 "**Additional Property**" means the real property legally described in the attached Exhibit C.

1.2 "**Annexation Owner**" means TLM Holdings LLC, an Oregon limited liability company, and/or H. D. Aviation, Corp., an Oregon corporation, and their respective assignees of the annexation rights granted herein to each Annexation Owner.

1.3 "**Association**" means the association of unit owners established pursuant to Article 14 below.

1.4 "**Attached Unit**" means a unit that is attached to another unit, the boundaries of which will be as described in Section 4.3(b).

1.5 "**Aviation Laws**" means the ordinances, regulations and statutes of the Federal Aviation Administration, the Transportation Security Administration, and the Oregon Department of Aviation, to the extent the same affect the use and construction of the Condominium and access to the Aurora State Airport ("**Airport**").

1.6 "**Bylaws**" means the Bylaws of the Southend Corporate Airpark Condominium Owners Association adopted pursuant to Section 14.4 below as they may be amended from time to time.

1.7 "**Commercial Unit Expenses**" means that subset of common expenses as defined in Section 8.1(b).

1.8 "**Commercial Hangar Units**" means those units designated as such in the attached Exhibit B or in any supplemental declaration annexing property to the Condominium.

1.9 "**Commercial Units**" means Commercial Hangar Units and any other type of unit that may be created in any supplemental declaration annexing property to the Condominium, which permits the same use as the Commercial Hangar Units as set forth in the Bylaws.

1.10 "**Condominium**" means all of the property submitted to the condominium form of ownership by this Declaration plus any Additional Property annexed to the project pursuant to Article 15 below.

1.11 "**Declarant**" means Yellow Gate Corporate Hangars LLC, an Oregon limited liability company, and its successors and assigns.

1.12 "**Declaration**" means this Declaration as it may hereafter be amended and any supplemental declaration annexing property to the Condominium.

1.13 "**Freestanding Unit**" means a unit that is unattached to any other unit, the boundaries of which will be as described in Section 4.3(b).

1.14 "**General Expenses**" mean those common expenses as defined in Section 8.1(a).

1.15 "**Individual Expenses**" means those expenses as defined in Section 8.1(b).

1.16 "**Mortgage**" and "**Mortgagee**" mean, respectively, a recorded mortgage, trust deed or contract of sale that creates a lien against a unit, and the holder, beneficiary or vendor of such a mortgage, trust deed or contract of sale.

1.17 "**Plat**" means the plat of Southend Corporate Airpark Condominiums recorded simultaneously with the recording of this Declaration.

1.18 "**Specially Allocated Expenses**" means that subset of common expenses as defined in Section 8.1(b), which does not include General Expenses.

1.19 "**Shared Limited Common Element Expenses**" means that subset of common expenses as defined in Section 8.1(b).

1.20 "**Yellow Gate Hangar Units**" means those units designated as such in the attached Exhibit B or in any supplemental declaration annexing property to the Condominium.

1.21 "**Yellow Gate Hangar Expenses**" means that subset of common expenses as defined in Section 8.1(b).

1.22 **Incorporation by Reference.** Except as otherwise provided in this Declaration, each of the terms defined in ORS 100.005, a part of the Oregon Condominium Act, shall have the meaning set forth in that section.

Article 2

SUBMISSION OF PROPERTY TO CONDOMINIUM STATUTE

The property submitted to the Oregon Condominium Act by this Declaration includes the real property in Marion County, Oregon, which is owned and conveyed in fee simple by the Declarant, as legally described in the attached Exhibit A. The property submitted includes the land so described, all buildings, improvements and structures, all easements, and rights and appurtenances located on, belonging to, or used in connection with such land, including but not limited to all rights to use wells, well permits, and water rights or water permits, to the extent that they benefit the Condominium, the following appurtenant easements in which Declarant owns an easement interest:

(a) Taxiway Easement Agreement, recorded December 7, 2005 at Reel 2577 Page 63, as amended by the Amendment to Taxiway Easement Agreement recorded December 7, 2005 at Reel 2577 Page 64, as amended by the Amendment to Taxiway Easement Agreement recorded February 2, 2007 at Reel 2769 Page 101;

(b) (80 foot) Taxilane Easement Agreement, recorded August 26, 2009 at Reel 3098 Page 278;

(c) Loop Road Easement Agreement, recorded November 1, 2005 at Reel 2560, Page 245, and amended by Amendment to Loop Road Roadway Easement Agreement and Declaration, recorded October 30, 2008 at Reel 3006, Page 119;

(d) 100-foot East Taxiway Easement Agreement, recorded November 18, 2013 at Reel 3561 Page 233;

(e) Shared Well Water Agreement, November 18, 2013 at Reel 3561 Page 234;

(f) Fifteen Foot (15') Utility Easement Agreement November 18, 2013 at Reel 3561 Page 235;

(g) Storm Sewer Easement, recorded November 18, 2013 at Reel 3561 Page 236;

(h) North-South Utility Corridor Extension Easement recorded November 18, 2013 at Reel 3561 Page 237; and

(i) Roadway Easement, recorded November 18, 2013 at Reel 3561 Page 238 (altogether, the "**Appurtenant Easements**").

Article 3

NAME OF CONDOMINIUM

The name by which the Condominium shall be known is "**Southend Corporate Airpark Condominium.**"

Article 4

UNITS

4.1 **General Description of Buildings**. Stage 1 consists of two one-story buildings without basement, which are commonly known as Hangar Mike ('M' on the Plat) and Hangar November ('N' on the Plat). The buildings are of steel beam and siding construction on a concrete slab foundation and steel roofs.

4.2 **General Description, Location and Designation of Units**. Stage 1 contains 16 Attached Yellow Gate Hangar Units and no Freestanding or Attached Commercial Hangar Units. The area of each unit in square feet is shown on the Plat and the attached Exhibit B.

4.3 **Boundaries of Units**.

(a) **Boundaries of Attached Units**. Each Attached Unit shall be bounded by the interior surfaces of its perimeter and bearing walls, slab foundation, roof, window frames, doors and door frames, trim and the exterior surface of window glazing. Where no boundary wall separates two Attached Units or a unit and a common element, the boundary shall be a vertical plane as shown on the Plat. The Attached Unit shall include all drywall, paint, finished flooring, if any, and any other materials constituting any part of the unit's finished surfaces, except those portions of the walls, floors or ceilings that materially contribute to the structural or shear capacity of the Condominium. All other portions of the walls, floors, or roofing shall be a part of the common elements. In addition, each Attached Unit shall include the following: (a) all spaces, nonbearing interior partitions (including dropped ceilings or ceilings constituting an interior partition that are below the roof of the unit), window glazing and screens, window frames, unit access doors and frames, aircraft and vehicle access doors, frames, and electric or hydraulic door openers and other related equipment, and interior doors and door frames, and all other fixtures and improvements within the boundaries of the unit; (b) all outlets of utility and communications service lines, including but not limited to power, light, gas, hot and cold water, heating, refrigeration, air conditioning, waste disposal, security, cable television and telephone, within the boundaries of the unit, but shall not include any part of such lines, pipes, or ducts themselves if they are shared with or serve other units or a common element; otherwise, all such lines and ducts serving only the unit shall be part of the unit; and (c) all interior security equipment, cameras, alarms, cabling, wi-fi and recording equipment that serve only the unit. Notwithstanding that they may be attached to or protrude into the common elements, window frames, door frames, canopies, awnings, signs and sign overhangs are part of the unit.

(b) **Boundaries of Freestanding Units**. Each Freestanding Unit shall be comprised of a single building, which is bounded by (i) the surface of the slab foundation of the

building, (ii) by the vertical exterior surfaces of the building's windows, perimeter, and bearing walls, and (iii) by the exterior surface of the roof of the building.

Each Freestanding Unit shall include all structural components of the building of which it is constructed, including girders, beams, joists, columns, and foundation, framing and siding, roofing sheeting and membrane, ceilings, windows and window frames, access and interior doors and door frames and trim, aircraft and vehicle access doors and frames, electric or hydraulic door openers, and other related equipment, except any common elements that are identified as such on the Plat. A Freestanding Unit shall include all finishing materials within the boundaries of the unit, including but not limited to, all drywall, paneling, tiles, dropped ceilings, paint, finished flooring and any other materials constituting any part of its finished surfaces. Freestanding Units shall also include all outlets of utility and communications service lines, conduits and pipes, including but not limited to power, light, gas, hot and cold water, heating, refrigeration, air conditioning, waste disposal, security, cable television and telephone, within the interior of the unit, but shall not include any part of such lines, pipes, or ducts themselves if they are shared with or serve other units or a common element, otherwise, all such lines and ducts serving only the unit shall be part of the unit; and all interior security equipment, cameras, alarms, cabling, wi-fi, and recording equipment that serve only the unit. Notwithstanding that they may protrude into the common elements, window frames, door frames, gutters and downspouts, roof overhangs, canopies, awnings, signs, and sign overhangs and the like on a Freestanding Unit building, are part of such unit.

Article 5

GENERAL COMMON ELEMENTS

The general common elements consist of all portions of the Condominium that are not part of a unit or a limited common element, including, but not limited to, the following:

5.1 The land, pathways, driveways, roadways, fences, grounds, landscaped areas, aircraft taxilanes, aircraft ramps, aircraft turnaround and staging areas, trash enclosures, and parking areas.

5.2 The fire suppression system and alarm system, riser rooms, and communication and water lines; security systems, including but not limited to server rooms, surveillance cameras, card reading system and security cards, and any other aspects or components of such life safety and security systems serving all units.

5.3 All septic tanks, water treatment equipment, if any, and sewer and water lines.

5.4 All other elements of the buildings and the Condominium necessary or convenient to their existence, maintenance and safety, or normally in common use, except as may be expressly designated in this Declaration as part of a unit or a limited common element.

Article 6

LIMITED COMMON ELEMENTS

The following shall constitute limited common elements, the use of which shall be restricted to the Yellow Gate Hangar Units based on the relative square footage of each Yellow Gate Hangar Unit compared to all Yellow Gate Hangar Units combined:

(a) Septic tanks and lines serving only the Yellow Gate Hangar Units.

(b) Security systems and equipment, including but not limited to surveillance cameras, servers, and communications lines, fire suppression lines, risers, and controllers, which serve only the Yellow Gate Hangar Units.

(c) Pipes, ducts, conduits, wires and other utility and communications installations pertaining to the Yellow Gate Hangar Units (and not just a single unit).

(d) Roofs, foundations, bearing and shear walls, perimeter walls, any common walls added to separate units at the boundary demised by a vertical plane designated on the Plat, beams, columns, and girders to the interior surfaces thereof pertaining to the Yellow Gate Hangar Units.

(e) Utility room that is not part of a unit and which are marked as "**LCE-Utility**" on the Plat.

Article 7

ALLOCATION OF UNDIVIDED INTERESTS IN COMMON ELEMENTS

Each unit will be entitled to an undivided ownership interest in the common elements determined by the ratio by which the square footage of the particular unit bears to the total square footage of all units combined, as shown on the attached Exhibit B. Such allocation will change if additional stages are added to the Condominium as is more particularly described in Section 15.4 below. If units are ever consolidated or if a Commercial Hangar Unit or Yellow Gate Hangar Unit is ever subdivided, the percentage ownership interest in the common elements shall be allocated among the consolidated or subdivided units in the proportion by which the square footage in the individual unit bears to the total square footage of all of the affected units. Each unit's interest in the common elements shall be inseparable from the unit and any conveyance, encumbrance, judicial sale, or other transfer, voluntary or involuntary, of an undivided interest in the common elements shall be void unless the unit to which that interest is allocated is also transferred.

Article 8

COMMON PROFITS AND EXPENSES; VOTING

8.1 **Allocation of Common Profits and Expenses**. The common profits of the Condominium shall be allocated to the owner of each unit according to the ratio by which the square footage of the particular unit bears to the total square footage of all units combined. Except upon termination of the Condominium or as otherwise provided in the Bylaws with respect to damage, destruction or condemnation, any such common profits shall be used solely

for the purpose of maintaining, repairing, and replacing the common elements or for other expenses or reserves of the Association.

(a) **Allocation of General Expenses**. Except as otherwise set forth below, the common expenses shared by all units of the Condominium are referred to herein as "**General Expenses**," which shall be allocated to the owner of each unit according to the ratio by which the square footage of the particular unit bears to the total square footage of all units combined. The following expenses shall be General Expenses: (i) the cost of insuring, maintaining, repairing or replacing the general common elements, including without limitation the exterior of the building and roofing of general common element structures, the aircraft taxilanes, aircraft turnaround and staging areas, and vehicle parking areas and spaces, which are not designated as limited common elements, and the reserves for the same; (ii) the cost of exterior lighting and landscaping; (iii) the cost of professional management of the Association; (iv) the cost associated with maintenance of recorded easements appurtenant to the Condominium; and all other common expenses not specifically allocated in Section 8.1(b); and (v) common services for the Condominium such as security, alarm, trash and recycling disposal services.

(b) **Allocation of Specially Allocated Expenses**. As a subset of common expenses that does not include General Expenses, the following Specially Allocated Expenses shall be allocated as follows:

(1) **Yellow Gate Hangar Expenses**. Yellow Gate Hangar Expenses are expenses attributable only to the Yellow Gate Hangar Units, including: (i) the costs of maintaining, repairing or replacing and insuring the Yellow Gate Hangar Limited Common Elements and reserves for the same; (ii) the costs of maintaining, repairing or replacing the septic and water delivery system, including all elements of which serve only the Yellow Gate Hangar Units, and reserves for the same, and for any other utilities serving only the Yellow Gate Hangar Units with a common meter; and (iii) security and fire suppression equipment and other life safety equipment or services exclusively used by the Yellow Gate Hangar Units. Yellow Gate Hangar Expenses shall be shared among the Yellow Gate Hangar Units based on the ratio by which the square footage of the particular Yellow Gate Hangar Unit bears to the total square footage of all Yellow Gate Hangar Units combined as set forth in Exhibit B, except as otherwise provided below.

(2) **Commercial Unit Expenses**. Commercial Unit Expenses are expenses attributable only to the Commercial Units, including: (i) the costs of maintaining, repairing, and replacing the Commercial Limited Common Elements and reserves for the same; (ii) the costs of maintaining, repairing or replacing the central septic and water delivery system, including, all elements of which serve only the Commercial Units and reserves for the same, and any other utilities serving only the Commercial Units with a common meter; and (iii) security equipment, security and fire suppression equipment exclusively for the Commercial Units. Commercial Unit Expenses shall be shared among the Commercial Units based on the ratio by which the square footage of the particular Commercial Unit bears to the total square footage of all Commercial Units combined, as set forth in any supplemental declaration of the Condominium.

(3) **Individual Expenses**. Individual Expenses are maintenance, repair, or replacement expenses borne by the Association that only benefit certain individual units, including: (i) the costs of maintaining, repairing and replacing an individual Attached Units' skylights, if any; (ii) the costs of water and sewer according to the sub-meter(s) for an individual unit; (iii) any services for which an individual unit contracts separately with the Association; and (iv) any fees assessed by the Oregon Department of Aviation for ingress and egress of the aircraft to and from the Airport based in the owner's unit that is billed to the Association. Additionally, if the board of directors determines that a particular unit's use of any commonly billed utilities or services, including the utilization of common element parking spaces, is greater than the average of other unit owners' or that the use causes an increase in fire or other insurance premiums, the board may assess to such owner the cost attributable to such extra use as an Individual Expense. Individual Expenses shall be charged to the individual unit owner as individual assessments.

(4) **Shared Limited Common Element Expenses**. Shared Limited Common Element Expenses are expenses attributable only to the property insurance, maintenance, repair and replacement of limited common elements, pertaining to some but not all of the units, or to some but not all of a particular type of unit, which expenses are not Yellow Gate Hangar Expenses or Commercial Unit Expenses. Shared Limited Common Element Expenses shall be shared among the units to which such limited common element pertains, as set forth on the Plat or Declaration or any supplemental plat or Supplemental Declaration of the Condominium, based on the ratio by which the square footage of the particular unit bears to the total square footage of all units combined to which the particular limited common element pertains.

(5) **Shared Utility Expenses**. Shared Utility Expenses are those expenses incurred by the Association in respect of the costs for maintenance, repair and replacement of the wells, irrigation, fire suppression, water and septic system serving the Condominium. To the extent such expenses are not billed separately by a service provider as between the Yellow Gate Hangar Units and Commercial Units, or as between individual units, or to the extent that there are not individual sub-meters that would provide the information regarding individual usage of such utility services necessary to charge utility expenses based on actual use, the board of directors shall make a reasonable estimation of use as the basis for designation of such expenses as Yellow Gate Hangar Expenses, Commercial Unit Expenses, Shared Limited Common Element Expenses, or Individual Expenses, as the board reasonably determines.

The board of directors shall have the authority to reasonably categorize common expenses under one of the Specially Allocated Expenses.

In the event the board of directors makes what a unit owner or group of owners believes to be an inequitable assignment and allocation of such common expenses to a given unit owner or owners, or an inequitable categorization of a given expense, whether General Expenses or one of the Specially Allocated Expenses, or if a board of directors voting deadlock prevents the board from making an equitable allocation or categorization of the same, then, a unit owner or a group of unit owners affected by such categorization or allocation of expenses may give the board notice requesting review of such allocation or categorization and an opportunity to be heard. If

following such review and opportunity to be heard the issue is not resolved, the dispute resolution process described in Bylaws Article 10 shall apply, notwithstanding anything to the contrary therein.

8.2 **Allocation of Voting Rights**. Each owner of a unit shall be entitled to a vote in the affairs of the Association based on the unit's allocation of undivided interest in the common elements of the Condominium; provided, however, that Declarant shall have three times the voting rights otherwise allocable to each unit owned by Declarant until the earlier of (a) when Declarant has sold and conveyed to a person other than a successor declarant or Annexation Owner 75 percent or more of the total number of units that Declarant may submit to the Condominium, or (b) seven years after the date of the first conveyance of a unit to a person other than a successor declarant or Annexation Owner. The method of voting shall be as specified in the Bylaws.

Article 9

SERVICE OF PROCESS

The designated agent to receive service of process in cases provided in subsection (1) of ORS 100.550 will be named in the Condominium Information Report to be filed in accordance with ORS 100.250(1)(a).

Article 10

USE OF PROPERTY

Each unit is to be used for the purposes set forth below. Additional limitations on use of units and common elements are contained in the Bylaws and the rules and regulations adopted pursuant to the Bylaws. Each unit owner shall be bound by each of these documents. Additionally, unit owners shall comply with all applicable Aviation Laws regulating the use of the Condominium, alterations to the units, and access to the Airport from the Condominium.

10.1 **Yellow Gate Hangar Units**. Yellow Gate Hangar Units shall be used primarily for Yellow Gate Hangar Unit purposes as defined in the Bylaws.

10.2 **Commercial Hangar Units**. Commercial Hangar Units shall be used for Commercial Hangar Unit purposes as defined in the Bylaws.

Article 11

MAINTENANCE OF COMMON ELEMENTS

11.1 **Responsibility for Maintenance.** Except as otherwise provided in Section 8.1, the necessary work to maintain, repair or replace the common elements shall be the responsibility of the board of directors of the Association and shall be carried out as provided in the Bylaws. Subject to Section 7.3 of the Bylaws regarding damage or destruction by casualty, the cleaning, maintenance, repair and replacement of any part of a unit, or utilities or security, life safety and fire systems that serve only such unit, shall be the responsibility of the owner of

the unit. Each unit owner will maintain its unit and limited common elements pertaining solely to the unit in good condition and repair. Any limited common element that pertains to more than one unit shall be maintained by the Association, with the cost of such maintenance allocated to the units pursuant to Section 8.1.

11.2 **Mortgagee's Rights upon Failure to Maintain**. If the Mortgagee of any unit determines that the board of directors is not providing an adequate maintenance, repair and replacement program for the common elements, such Mortgagee, at its option, may give a notice to the board of directors by delivering it to the registered agent, setting forth the particular defect that the Mortgagee believes exists in the maintenance, repair and replacement program. If the specified defects are not corrected within 90 days subsequent to receipt of such notice, then the Mortgagee, upon written notice to the registered agent that it is exercising its proxy rights, shall have the right to attend succeeding annual or special meetings of the Association and to cast a vote for each unit on which it holds a Mortgage on all business coming before such meeting. Such proxy rights shall continue until the defects listed on the notice are corrected.

Article 12

EASEMENTS

12.1 **In General.** Each unit has an easement in and through each other unit and the common elements for all support elements and utility, wiring, heat, plumbing, security and surveillance system equipment and communications from cabling, and service elements that were installed or constructed by Declarant prior to conveyance of the unit to an owner other than Declarant or a successor declarant, and for reasonable access thereto, as required to effectuate and continue proper operation of the Condominium, including, without limitation, easements as required for the electrical wiring and plumbing for each unit and an easement to locate and maintain air conditioning compressors or other air handling or ventilation equipment and easements to locate and maintain ventilation, security and other equipment serving a unit on the exterior walls or roof of the unit (whether common elements or part of the unit), but not including communications or cellular towers. The specific mention or reservation of any easement in this Declaration does not limit or negate the general easement for common elements reserved by law. Each unit owner has an unrestricted right of ingress and egress to his or her unit for pedestrian, vehicular, and aircraft access. This right is perpetual and passes with the ownership of the unit. Each unit owner shall have, in common with all other unit owners, an easement for ingress and egress through the Yellow Gate Hangar Limited Common Elements and the Commercial Limited Common Elements, as the case may be, to the extent necessitated by an emergency.

12.2 **Encroachments**. Each unit and all common elements shall have an easement over all adjoining units and common elements for the purpose of accommodating any present or future encroachment as a result of engineering errors, construction, reconstruction, repairs, settlement, shifting or movement of any portion of the property, or any other similar cause, and any encroachment due to building overhang or projection. There shall be valid easements for the maintenance of the encroaching units and common elements so long as the encroachments shall exist, and the rights and obligations of owners shall not be altered in any way by the encroachment. This provision does not relieve a unit owner of liability in the case of willful

misconduct of the unit owner or relieve Declarant or any contractor, subcontractor or materialman from any liability as a result of failure to adhere to the Plat. The encroachments described in this Section 12.2 shall not be construed to be encumbrances affecting the marketability of title to any unit.

12.3 **Granting of Easements by Association**. Subject to the requirements of ORS 100.405(6), the Association may grant, execute, acknowledge and deliver on behalf of the unit owners leases, easements, rights-of-way, licenses and similar interests affecting the common elements and consent to vacation of roadways within and adjacent to the Condominium. Any such instrument shall be executed by the chairperson and secretary of the Association. The granting of any such interest in a limited common element must have the approval or consent of the owner or owners to which the use of the limited common element is reserved and the holders of any first Mortgage affecting such unit or units, except that if the limited common element is reserved for five or more units, then the provisions of ORS 100.405(8) shall apply.

12.4 **Right of Entry**. Upon request given to the unit owner and any occupant, any person authorized by the Association may enter any unit and any limited common element to perform necessary maintenance, repair or replacement of the common elements or any unit for which the Association has maintenance, repair or replacement responsibility under this Declaration, the Bylaws or by law, to make emergency repairs to the unit or common elements that are necessary for the public safety or to prevent damage to common elements or to another unit or to enforce this Declaration, the Bylaws or the Rules and Regulations. Requests for entry must be made in advance and for a reasonable time, except in the case of an emergency, when the right of entry is immediate. An emergency entry does not constitute a trespass or otherwise create a right of action in the owner of a unit.

12.5 **Easements for Declarant**. Declarant and Declarant's agents, successors and assigns, and each of the Annexation Owners for the benefit of any portion of the Additional Property owned by an Annexation Owner, respectively, shall have an easement over and upon the common elements as may be reasonably necessary for the purpose of constructing additional stages and completing or making repairs to existing structures or the purpose of carrying out sales and rental activities necessary or convenient for the sale or rental of units, including, without limitation, the right to use the units owned by Declarant or an Annexation Owner as model units and the right to use a unit as a sales office and for the purpose of discharging any other obligation of Declarant or exercising any other special Declarant right, whether arising under the Oregon Condominium Act or reserved in this Declaration or the Bylaws. For a period of 10 years following closing of the sale of the last unit by Declarant to a person other than a successor declarant, Declarant and each of the Annexation Owners, their members, managers and their successors, agents and designees shall have a right to inspect the common elements of the Condominium and the Association's records regarding inspections and maintenance of the Condominium. Such persons shall have the right to enter units for the purpose of performing such inspections, provided that requests for entry are made in advance and that such entry is at a time convenient to the owner of the unit.

12.6 **Declarant's Personal Property**. Declarant reserves the right to retain all personal property and equipment used in the sales, management, construction and maintenance of the Condominium that has not been represented as property of the Association. Declarant and

each of the Annexation Owners reserves the right to remove from the Condominium (promptly after the sale and close of escrow of the last unit) any and all goods and improvements used in development, marketing and construction, whether or not they have become fixtures.

12.7 **Reservation of Easements for Future Development**. Declarant hereby reserves for the benefit of each and every portion of the real property described in Exhibit C (the "**Additional Property**") owned now or later acquired by the Declarant, and Declarant hereby grants to each Annexation Owner, respectively, for the benefit of each and every portion of the Additional Property owned now or later acquired by such Annexation Owner: (a) a nonexclusive easement for ingress and egress over all roadways, taxilanes, and driveways within the Condominium, and over such portion of the vacant land as may be necessary to connect roads with such roadway and driveway system, (b) an easement for the maintenance and use of all existing utility lines and systems within the Condominium, including without limitation water, sewer, gas, electrical, telephone, security, alarm, communication and cable television systems, (c) an easement for the installation, maintenance and use of new taxilanes, and for utility lines and systems upon the general common element land of the Condominium, provided Declarant or Annexation Owner restores any damage to the general common elements resulting from such utility and system installation or maintenance, and (d) an easement for use of the common element facilities of the Condominium, provided that Declarant or Annexation Owner, as applicable, pays a pro rata share of the costs of operating and maintaining such easement areas based on the number of units in the benefited property divided by the total number of units in the benefited property and the Condominium combined. Such easements shall be for the benefit of and shall run with the land constituting the entire portion of the Additional Property owned by such parties, and each and every portion thereof, whether or not such property is ultimately annexed to the Condominium as provided in Article 15 below.

12.8 **Declaration of Shared Easements**. Stage 1 of the Condominium is a part of a single, integrated aviation project (the "**Project**") comprised of Stage 1 of the Condominium and portions of the Additional Property. Until such time, if ever, that all of the Additional Property has been annexed to the Condominium pursuant to Article 15 of this Declaration, the Condominium and the remainder of the Project will share use of certain common utilities, roadways, taxilanes, security gates and gate houses, security card reading devices, and other Project common facilities and services, including those set forth in the Appurtenant Easements. The Condominium will be subject to and entitled to the benefit of the easements set forth in such Appurtenant Easements as if fully set forth herein. The maintenance costs associated with the Appurtenant Easements that serve only the Yellow Gate Hangar Units or Commercial Units, shall be Yellow Gate Hangar Expenses or Commercial Unit Expenses, respectively; all other maintenance costs associated with the Appurtenant Easements and any other easements benefitting or serving the Condominium shall be General Expenses.

Article 13

MORTGAGEES

13.1 **Approvals Required**. In addition to any other or greater approvals required by Oregon law, this Declaration or the Bylaws, the prior written approval of holders of first

Mortgages of units in the Condominium having two-thirds of the voting power of units subject to Mortgages must be obtained for the following:

(a) Abandonment or termination of the Condominium regime.

(b) Except as provided in Sections 15.2 and 16.1 any change in the pro rata interest or obligations of any individual unit for (a) the purpose of levying assessments or charges or allocating distributions of hazard insurance proceeds or condemnation awards, or (b) determining the pro rata share of ownership of each unit in the common elements.

(c) Except as provided in Section 16.1 the partition or subdivision of any unit.

(d) Abandonment, partition, subdivision, encumbrance, sale or transfer of the common elements. The granting of easements for public utilities or for other public purposes consistent with the intended use of the common elements by the Condominium Project shall not be deemed a transfer within the meaning of this clause.

(e) Use of hazard insurance proceeds for losses to any condominium property, whether to units or to common elements, for other than the repair, replacement or reconstruction of such improvements, except as provided by statute in cases of substantial loss to the units and/or common elements of the Condominium Project.

13.2 **Requests for Approvals**. Except as otherwise provided in the Oregon Condominium Act, any Mortgagee who receives a written request for approval under Section 13.1 above and who fails to submit a negative response to the requesting party within 60 days after it receives written notice of the proposal identifying the property securing the Mortgage by legal description or address, identifying the Mortgage by loan number or recording information and delivered by certified or registered mail, return receipt requested, shall be deemed to have approved such request.

13.3 **Notice to First Mortgagees**. Any first Mortgagee, upon request, will be entitled to written notification from the Association of any default in the performance by the owner of the Mortgaged unit of any obligation under this Declaration, the rules and regulations or the Bylaws that is not cured within 60 days.

13.4 **Amendment of this Article**. This article may not be amended without the prior written consent of all holders of first Mortgages on units in the Condominium.

Article 14

ASSOCIATION OF UNIT OWNERS

14.1 **Organization.** Upon the recording of this Declaration an association of unit owners shall be organized to serve as a means through which the unit owners may take action with regard to the administration, management and operation of the Condominium. The name of this association shall be "**Southend Corporate Airpark Condominium Owners Association**," and the Association shall be an Oregon nonprofit corporation.

14.2 **Membership; Board of Directors.** Each unit owner shall be a member of the Association. The affairs of the Association shall be governed by a board of directors as provided in the Bylaws.

14.3 **Powers and Duties.** The Association shall have such powers and duties as may be granted to it by the Oregon Condominium Act, including each of the powers set forth in ORS 100.405(4), together with such additional powers and duties afforded it by this Declaration or the Bylaws.

14.4 **Adoption of Bylaws, Declarant Control of Association.** Upon the execution and the recording of this Declaration, Declarant shall adopt Bylaws for the Association, which Bylaws are attached as Exhibit D. Declarant specifically reserves the right to control the Association by appointing the interim directors of the Association until the organizational and turnover meeting of the Association has been held and the unit owners have elected regular directors as provided in Sections 2.2 and 3.4 of the Bylaws. In addition, Declarant shall have the right to consent to any amendment to the Declaration or the Bylaws as provided in Section 18.2 below and Section 9.2 of the Bylaws, and a weighted vote in the Association as provided in Section 8.2 above.

Article 15

PLAN OF DEVELOPMENT

The Condominium may be developed in stages. By recording this Declaration, Declarant hereby submits Stage 1 to the Condominium form of ownership. Declarant reserves the right to add additional stages to the Condominium and to annex such additional stages by recording supplements to this Declaration pursuant to ORS 100.120, together with a plat of the stage being annexed bearing a completion certificate as required by ORS 100.120 and 100.115.

In respect of any portion of the Additional Property owned by an Annexation Owner, Declarant grants the right to add additional stages composed of such portion, at the Annexation Owner's expense and with written consent of Declarant, which consent shall not be unreasonably withheld or delayed, by recording supplements to this Declaration pursuant to ORS 100.120, together with a plat of the stage being annexed bearing a completion certificate as required by ORS 100.120 and 100.115.

15.1 **Maximum Number of Units**. If fully developed, the Condominium shall contain not more than 100 units.

15.2 **Termination Date.** No additional stage may be added more than seven years after the recording of this Declaration. The period may be extended not to exceed two years by an amendment adopted pursuant to Section 18.2.

15.3 **Additional Common Elements**. Declarant does not propose to include in future stages any common elements that would substantially increase the proportionate amount of the common expenses payable by owners of units in Stage 1.

15.4 **Allocation of Interests in Common Elements, Common Expenses and Profits, and Voting.** The allocation of undivided interests in the common elements, allocation of common expenses and profits, and allocation of voting of units in Stage 1 will change if additional stages are annexed to the Condominium. The method used for such allocation shall be determined as set forth in Article 7 and Article 8 of this Declaration. Declarant reserves the right to create additional types of units and corresponding types of shared expenses for such units in additional stages.

15.5 **Conditions to Annexation of Additional Property.** Annexation of any Additional Property shall include sufficient common element parking spaces to satisfy parking quotas required by ordinance or applicable conditional use permits affecting such property, or otherwise required by the local jurisdiction. All parking spaces in the Condominium shall be general common elements, which shall be open for the use by any unit owner in the Condominium and subject to the parking rules and regulations developed by the board of directors. Taxilanes or taxiways that will be useful only to certain units in the Condominium, given their location and proximity, shall be designated on the supplemental plat as a limited common element only pertaining to the units annexed pursuant to such supplemental plat.

15.6 **Legal Description of Additional Stages.** A legal description of the property on which the additional stages would be located is included in the attached Exhibit C.

Article 16

CHANGES TO UNITS

16.1 **Relocation or Elimination of Boundaries; Consolidation or Division of Units.** Subject to compliance with the provisions of this Article and the Oregon Condominium Act:

(a) the boundaries between adjoining Attached units may be relocated, or may be eliminated so as to consolidate two or more such units into one unit; and

(b) a Commercial Hangar Unit may be divided or subdivided by an owner, including Declarant, into a total of no more than four Commercial Hangar Units. A Yellow Gate Hangar Unit may be divided or subdivided by an owner, including Declarant, into a total of no more than two Yellow Gate Hangar Units.

16.2 **Proposed Amendment.** The owner or owners of the units to be changed as provided in Section 16.1 above shall submit to the board of directors of the Association a proposed amendment that shall (a) state the purposes of the amendment, (b) identify the units involved, (c) assign an identifying number to any new unit created, (d) reallocate the interest in the common elements and the use of any limited common elements, voting rights, common expense liability and the right to common profits on the basis of the relative square footage of the units, (e) provide a means of access for each unit to common elements in the case of division of units or conversion of units to common elements, (f) include words of conveyance in the case of a relocation or elimination of boundaries, and (g) include any additional provisions necessary to conform to any other provisions of this Declaration or the Bylaws.

16.3 **Approval of Board of Directors**. The board of directors shall approve the proposed amendment unless the board determines within 45 days that the amendment is inconsistent with this Declaration or the Bylaws or the change will impair the structural integrity or mechanical systems of the Condominium or lessen the support of any portion of the Condominium.

16.4 **Opinion of Engineer; Supervision**. The board of directors may require the owner or owners of the units to be changed to submit an opinion of a registered professional engineer as to whether the proposed change will impair the acoustic performance, structural integrity or fire, life, safety and mechanical systems of the Condominium or weaken support of any portion of the Condominium. The board of directors or any agent appointed by the board may supervise the work necessary to effect the change. Any expenses incurred under this section shall be charged to the owners requesting the change.

16.5 **Execution and Recording of Amendment and Plat**. The amendment shall be executed by the owner or owners and any Mortgagees of the affected units, certified by the chairperson and secretary of the Association and approved and recorded in accordance with the Oregon Condominium Act. In addition, a plat showing the change shall be recorded in accordance with the Act.

Article 17

RESTRICTIONS ON TRANSFER

No unit owner or lessee of a unit may sell, lease, assign, or otherwise transfer ("**transfer**") a unit, a part of a unit or any interest in a unit, except by complying with the provisions of this Article 17.

17.1 **Background Check**. Prior to any transfer of an owner's unit, the unit owner shall perform a background check of the prospective transferee.

17.2 **Restrictions on Transfer**. No unit owner shall sell, transfer, lease, or sublease his or her unit, a part of such unit or any interest in such unit, to any purchaser, tenant, or other transferee who is:

(a) currently identified on the Specially Designated Nationals and Blocked Persons List maintained by the Office of Foreign Assets Control, Department of the Treasury ("**OFAC**") and/or on any other similar list maintained by OFAC pursuant to any authorizing statute, executive order or regulation, and

(b) a person or entity with whom a citizen of the United States is prohibited to engage in transactions by any trade embargo, economic sanction, or other prohibition of United States Law, regulation, or Executive Order of the President of the United States,

(c) a person whose funds or other assets constitute property of, or are beneficially owned, directly or indirectly, by an Embargoed Person (as hereinafter defined),

(d) a person in which an Embargoed Person has any interest of any nature whatsoever (whether directly or indirectly),

17.3 **Restriction Definitions**. The term "**Embargoed Person**" means any person, entity or government subject to trade restrictions under U.S. law, including but not limited to, the International Emergency Economic Powers Act, 50 U.S.C. §1701 et seq., the Trading with the Enemy Act, 50 U.S.C. App. 1 et seq., and any Executive Orders or regulations promulgated thereunder with the result that an investment in Seller by such person is prohibited by law or Seller is in violation of law by transferring the unit to such person. This Section shall not apply to any person to the extent that such person's interest in the unit owner's transferee is through a U.S. Publicly-Traded Entity. As used in this Declaration, "**U.S. Publicly-Traded Entity**" means an entity or organization (other than an individual) whose securities are listed on a national securities exchange, or quoted on an automated quotation system, in the United States, or a wholly-owned subsidiary of such an entity or organization.

Article 18

AMENDMENT

18.1 **How Proposed.** Amendments to the Declaration shall be proposed by either a majority of the board of directors or by unit owners representing 30 percent or more of the voting rights. The proposed amendment must be reduced to writing and shall be included in the notice of any meeting at which action is to be taken thereon or attached to any request for consent to the amendment.

18.2 **Approval Required.** Except as may otherwise be provided in this Declaration or by the Oregon Condominium Act, this Declaration may be amended if the amendment is approved by unit owners representing 75 percent of the voting rights of the Condominium, without regard to any weighted vote otherwise allocable to units owned by Declarant. Declarant's prior written consent shall also be required for a period of 10 years from the date of closing of the sale by Declarant of the last unit to a person other than a successor declarant or Annexation Owner. Except as provided in Article 15 and except as otherwise permitted by the Oregon Condominium Act, no amendment may change the size, location, allocation of undivided interest in the common elements, the method of determining liability for common expenses, the method of determining the right to common profits or the method of determining voting rights of any unit unless the amendment has been approved by the owners and Mortgagees of the affected unit. Any amendment to this Declaration adversely and materially affecting the Commercial Hangar Units shall require the written consent of the owners of the Commercial Hangar Units.

18.3 **Regulatory Amendments**. Notwithstanding the provisions of Section 18.2 above, until the turnover meeting as described in the Bylaws has occurred, Declarant shall have the right to amend this Declaration or the Bylaws in order to comply with the requirements of the Federal Aviation Administration; the Rural Development or the Farm Service Agency of the United States Department of Agriculture; the Federal National Mortgage Association; the Government National Mortgage Association; any department, bureau, board, commission or agency of the United States or the state of Oregon; or any corporation wholly owned, directly or

indirectly by the United States or the state of Oregon that insures, guarantees or provides financing for a condominium or units in a condominium.

18.4 **Recordation**. The amendment shall be effective upon recordation in the Deed Records of Marion County, Oregon, of the Declaration as amended or of the amendment thereto, certified to by the chairperson and secretary of the Association as being adopted in accordance with this Declaration and the provisions of the Oregon Condominium Act, and approved by the county assessor and the Real Estate Commissioner if such approvals are required by the Oregon Condominium Act.

Article 19

SEVERABILITY

Each provision of this Declaration and the Bylaws shall be deemed independent and severable, and the validity or partial invalidity of any provision shall not affect the validity or enforceability of the remaining part of that or any other provision of this Declaration or the Bylaws.

Article 20

APPLICABILITY

Each unit owner, including Declarant or Annexation Owner, respectively, as to any unsold unit, shall be subject to all of the rights and duties assigned to unit owners under the terms of the Declaration and Bylaws. All present and future owners, tenants, subtenants and occupants of units, and all present and future employees, agents, visitors and licensees of unit owners, shall be subject to and comply with the provisions of this Declaration, the Bylaws, and all rules and regulations adopted thereunder, as they may be amended from time to time.

EXHIBIT C

Future Stages

Tract 1:

A tract of land being in the northeast ¼ of Section 11 and the southeast ¼ of Section 2, Township 4 South, Range 1 West, Willamette Meridian, in the County of Marion, State of Oregon being more particularly described as follows:

Commencing at a ½ inch iron pipe at the northeast corner of Parcel 2 of Partition Plat 2008-103; thence South 0°04'30" East along the east line of said Parcel 3 a distance of 527.93; thence South 0°04'03" West along said east line 61.91 feet to the southeast corner thereof, said point also being the northeast corner of Parcel 1 of Partition Plat 2006-086 and the POINT OF BEGINNING of the herein described tract; thence South 0°04'03" West along the east line of said Parcel 1 a distance of 271.14 feet; thence South 89°54'33" East along the easterly north line of said Parcel 1 a distance of 60.00 feet to the easterly northeast corner of said Parcel 1; thence South 0°04'03" West along said east line of Parcel 1 a distance of 957.69 feet to the north line of Keil Road NE; thence South 89°49'41" West along the north line of said Keil Road NE 565.21 feet to the southwest corner of Parcel 1 of Partition Plat 1998-105; thence continuing along said north line of Keil Road NE South 89°49'41" West 328.55 feet to the southeast corner of that tract conveyed to ODOT in Reel 868, Page 298 and recorded July 15, 1991; thence North 7°07'45" East along the east line of said ODOT tract 385.30 feet to the northeast corner of said ODOT tract; thence North 82°50'28" West along the north line of said ODOT tract 135.43 feet, to the East line of that certain tract conveyed to the State of Oregon Recorded August 29, 2007 in Reel 2859 at Page 302; thence North 07°10'39" East along said East line, a distance of 1430.84 feet, to the north line of Parcel 3 of Partition Plat 2006-058, said point bears North 89°47'53" East 65.36 feet from the northwest corner of said Parcel 3 of Partition Plat 2006-58; thence North 89°47'53" East along the north line of said Parcel 3 a distance of 444.52 feet to the northwest corner of Parcel 2 of Partition Plat 2008-103; thence South 07°08'10" West along the west line of said Parcel 2 of Partition Plat 2008-103 a distance of 474.81 feet to the southwest corner thereof; thence South 82°51'30" East along the south line of said Parcel 2 of Partition Plat 2008-103 a distance of 240.04 feet; thence continuing along said south line South 53°38'27" East a distance of 148.11 feet to the POINT OF BEGINNING.

Tract 2:

A tract of land located in the northwest one-quarter of Section 12 and the northeast one-quarter of Section 11, Township 4 South, Range 1 West, Willamette Meridian, Marion County, Oregon, being more particularly described as follows:

Beginning at a 3¼" aluminum disk marking the Section corner common to sections 1, 2, 11 and 12; thence following the north line of said Section 12, South 89°44'34" East a distance of 413.97 feet to the centerline of Airport Road (County Road No. 59); thence following said centerline, South 15°26'41" East a distance of 1062.34 feet; thence leaving said centerline, South 74°33'19"

West a distance of 199.58 feet; thence South 14°17'37" East a distance of 245.57 feet to the centerline of Keil Road (County Road No. 429); thence following said centerline, South 89°49'52" West a distance of 567.59 feet; thence South 89°50'32" West a distance of 411.50 feet; thence leaving said centerline, North 00°04'03" East a distance of 30.00 feet to a ⅝" iron rod with a yellow plastic cap marked "Wolf Surveying Inc." marking the southeast corner of Parcel 3 of Partition Plat No. 98-105; thence following the northerly right-of-way line of said Keil Road, North 89°48'33" East a distance of 60.00 feet; thence North 00°04'03" East a distance of 957.35 feet; thence North 89°54'33" West a distance of 60.00 feet to a point on the east boundary of said Parcel 3; thence following the east boundary of said Parcel 3, North 00°04'03" East a distance of 231.91 feet to a ⅝" iron rod with a yellow plastic cap marked "Dehass & Associates Inc." marking the northeast corner of Parcel 1 of Partition Plat No. 2001-088; thence following the east boundary of Parcel 2 of Partition Plat No. 2001-088, North 00°04'03" East a distance of 101.23 feet to ½" iron pipe; thence following the north line of said Section 11, South 89°51'44" East a distance of 412.50 feet to the Point of Beginning.

Tract 3:

Beginning at the corner common to Sections 1, 2, 11 and 12 in Township 4 South, Range 1 West of the Willamette Meridian in Marion County, Oregon; thence West 412.5 feet to an iron pipe; thence North 0°15' West 1068.0 feet to an iron pipe; thence North 77°41' East 511.39 feet, more or less, to the center line of the County Road; thence South 15°30' East along said center line 1222.50 feet, more or less, to the South line of Section 1; thence North 89°50' West along said Section line 411.114 feet to a Point of Beginning.

BYLAWS OF SOUTHEND CORPORATE AIRPARK CONDOMINIUM OWNERS ASSOCIATION

Article 1

PLAN OF CONDOMINIUM OWNERSHIP

1.1 **Name and Location**. These are the bylaws of the Southend Corporate Airpark Condominium Owners Association (the "**Association**"). Southend Corporate Airpark Condominium (the "**Condominium**") is located in Marion County, Oregon, and has been submitted to the Oregon Condominium Act by a declaration recorded simultaneously with these Bylaws and by supplemental declarations, if any, annexing property to the Condominium (collectively, the "**Declaration**"). The location of the Condominium is more specifically described in the Declaration.

1.2 **Principal Office**. The principal office of the Association shall be located at such address as may be designated by the board of directors from time to time.

1.3 **Purposes**. This Association is formed under the provisions of the Oregon Condominium Act to serve as the means through which the unit owners may take action with regard to the administration, management and operation of the Condominium.

1.4 **Applicability of Bylaws**. The Association, all unit owners, and all persons using the Condominium property shall be subject to these Bylaws and to all rules and regulations that may be adopted pursuant to these Bylaws.

1.5 **Composition of Association**. The Association shall be composed of all the unit owners of the Condominium, including Yellow Gate Corporate Hangars LLC, an Oregon limited liability company, and its successors and assigns (the "**Declarant**"), and the Association, itself, to the extent any of these own any unit or units of the Condominium. All unit owners shall notify the Association of the address and telephone number where such owner can be reached and shall keep such information current.

1.6 **Incorporation**. The Association shall be incorporated under the Oregon Non-Profit Corporation Law. The Articles of Incorporation of the Association shall be consistent with the Declaration and these Bylaws, and these Bylaws shall constitute the bylaws of the incorporated association.

1.7 **Definitions**. The definitions contained in or adopted by the Declaration shall be applicable to these Bylaws.

Article 2

MEETINGS OF ASSOCIATION

2.1 **Place of Meetings**. The Association shall hold meetings at such suitable place convenient to the unit owners as may be designated by the board of directors from time to time.

2.2 **Turnover Meeting**. Within seven years after the date of conveyance of the first unit to a person other than a successor declarant, or within 90 days after Declarant has sold and conveyed to a person other than a successor declarant, 75 percent or more of the total number of units that Declarant and the Annexation Owners may submit to the Condominium, whichever is earlier, Declarant shall call the first meeting of the unit owners to organize the Association and to elect directors. If a quorum of the unit owners is present, the unit owners shall elect not fewer than the number of directors sufficient to constitute a quorum of the board of directors. Notice of such meeting shall be given to all owners as provided in Section 2.5. If Declarant fails to call the meeting, the meeting may be called and notice given by any unit owner or Mortgagee of a unit. The expense of giving notice shall be paid or reimbursed by the Association. At the meeting, Declarant shall deliver to the Association such information and documents as may be required by the Oregon Condominium Act. Nothing in this Section shall be construed as preventing Declarant from calling the organizational and turnover meeting prior to such date, or from calling informal, informational meetings of the unit owners.

2.3 **Annual Meetings**. The annual meetings of the Association shall be held on such date each year as may be established by the board of directors from time to time, or if the board does not establish such a date, then in the month of February at such hour and on such date as the chairperson may designate, or if the chairperson should fail to designate such date by the first day of February then on the last Tuesday in February. The annual meetings shall be for the purpose of electing directors and for the transaction of such other business as may properly come before the meeting.

2.4 **Special Meetings**. Special meetings of the Association may be called by the chairperson or by a majority of the board of directors, and must be called by the chairperson or secretary upon receipt of a written request from unit owners owning at least 30 percent of the voting rights stating the purpose of the meeting. Business transacted at a special meeting shall be confined to the purposes stated in the notice of meeting.

2.5 **Notice of Meetings**. Notice of the annual meeting and all other meetings of the Association stating the time and place and the purpose or purposes for which the meeting is being called shall be given by the chairperson or secretary. Notice must be given in writing by mail or, to the extent permitted by law, by electronic mail, facsimile or other form of electronic communication acceptable to the board of directors not less than 10 days nor more than 50 days prior to the date of the meeting to each unit owner. If mailed, it shall be sent to the owner at his or her address as it appears on the books of the Association. A copy shall be sent to any first Mortgagee requesting such notice. Proof of such notice shall be given by the affidavit of the person giving the notice. For a period of 10 years following closing of the sale of the last unit by Declarant to a person other than a successor declarant, notices of meetings (including agendas) shall also be given to Declarant (or any designee of Declarant specified in any written notice to

the Association) in the same manner as given to unit owners, and Declarant or a representative of Declarant shall be entitled to attend such meetings. Notice of meeting may be waived by any unit owner before or after meetings. When a meeting is adjourned for less than 30 days, no notice of the adjourned meeting need be given other than by announcement at the meeting at which such adjournment takes place.

2.6 **Voting**. Each owner of a unit shall have a vote equal to the unit's allocation of undivided interest in the common elements of the Condominium; provided, however, that Declarant shall have three times the voting rights otherwise allocable to each unit owned by Declarant until the earlier of (a) when Declarant has sold and conveyed to a person other than a successor declarant 75 percent or more of the total number of units that Declarant may submit to the Condominium, or (b) seven years after the date of the first conveyance of a unit to a person other than a successor declarant or a Declarant Member. Declarant shall be entitled to vote as the unit owner of any then existing unit retained by Declarant, and the board of directors shall be entitled to vote on behalf of any unit that has been acquired by or on behalf of the Association; provided, however, that the board shall not be entitled to vote such units in any election of directors.

2.7 **Casting of Votes and Consents**. The voting rights or consent of a unit owner may be cast in person at a meeting of the Association or, at the discretion of the board of directors, by proxy in accordance with paragraph (a) of this Section, by absentee ballot in accordance with paragraph (b) of this Section, by written ballot in accordance with paragraph (c) of this Section, or by any other method specified in the Declaration, these Bylaws or the Oregon Condominium Act, except as otherwise provided in Section 2.8 below.

(a) **Proxies**. A proxy must be dated and signed by the unit owner, is not valid if it is undated or purports to be revocable without notice, and terminates one year after its date unless the proxy specifies a shorter term. The board of directors may not require that a proxy be on a form prescribed by the board. A unit owner may not revoke a proxy given pursuant to this paragraph except by actual notice of revocation to the person presiding over a meeting of the Association or to the board if a vote is being conducted by written ballot in lieu of a meeting. A copy of a proxy in compliance with this paragraph provided to the Association by facsimile, electronic mail or other means of electronic communication utilized by the board is valid.

(b) **Absentee ballots**. An absentee ballot, if authorized by the board of directors, shall set forth each proposed action and provide an opportunity to vote for or against each proposed action. All solicitations for votes by absentee ballot shall include instructions for delivery of the completed absentee ballot, including the delivery location and instructions about whether the ballot may be canceled if the ballot has been delivered according to the instructions. An absentee ballot shall be counted as a unit owner present for the purpose of establishing a quorum. Even if an absentee ballot has been delivered to a unit owner, the unit owner may vote in person at a meeting if the unit owner has returned the absentee ballot and canceled the absentee ballot, if cancellation is permitted in the instructions given under this paragraph.

(c) **Ballot meetings**. At the discretion of the board of directors, any action that may be taken at any annual, regular or special meeting of the Association may be taken without a meeting by written ballot to the extent and in the manner provided in ORS 100.425.

(d) **Electronic ballots**. To the extent authorized by the board of directors and permitted by the Oregon Condominium Act, any vote, approval or consent of a unit owner may be given by electronic ballot.

(e) **Mortgages**. A unit owner may pledge or assign such owner's voting rights to a Mortgagee. In such a case, the Mortgagee or its designated representative shall be entitled to receive all notices to which the unit owner is entitled under these Bylaws and to exercise the unit owner's voting rights from and after the time that the Mortgagee shall give written notice of such pledge or assignment to the board of directors. Any first Mortgagee may designate a representative to attend all or any meetings of the Association.

2.8 **Votes Involving Major Decisions**. For votes of the Association involving a Major Decision, 67 percent of the voting rights of the Association will be required to approve the Major Decision. Unit owners shall not be permitted to assign proxy voting discretion to any other person or entity on matters involving Major Decisions of the Association. The term "**Major Decision**" shall include the following:

(a) Any vote of the Association to terminate professional management pursuant to Section 3.7 below;

(b) Any vote of the Association to incur or commit the Association to incur legal fees in excess of $10,000 for any specific litigation or claim matter or enter into any contingent fee contract on any claim in excess of $100,000 pursuant to Section 3.6(e) below;

(c) Any vote of the Association relating to the modification, closure, removal, elimination or discontinuance other than on a temporary basis of any aircraft taxilane, pursuant to Section 3.6(l) below;

(d) Any vote of the Association proposing to borrow of any sum of money in excess of an amount or amounts, aggregated for the calendar year in question, exceeding 15 percent of the estimated budget of the Association pursuant to Section 3.6(h) below; and

(e) Any vote of the Association to approve an amendment to these Bylaws.

2.9 **Fiduciaries and Joint Owners**. An attorney-in-fact, executor, administrator, guardian, conservator or trustee may vote or grant consent with respect to any unit owned or held in a fiduciary capacity, whether or not the specific right has been transferred to his or her name; provided, that such person shall satisfy the secretary that he or she is the attorney-in-fact, executor, administrator, guardian, conservator or trustee, holding the unit in a fiduciary capacity. Whenever any unit is owned by two or more persons jointly, according to the records of the Association, the vote of such unit may be exercised by any one of the owners, in the absence of protest by a co-owner. In the event of disagreement among the co-owners, the vote of the unit shall be disregarded completely in determining the proportion of votes given with respect to such matter unless a valid court order establishes the authority of a co-owner to vote.

2.10 **Tenants and Contract Vendors**. Unless otherwise expressly stated in the rental agreement or lease, all voting rights allocated to a unit shall be exercised by the owner/landlord.

Unless otherwise stated in the contract, all voting rights allocated to a unit shall be exercised by the vendee of any recorded land sale contract on the unit.

2.11 **Quorum of Unit Owners**. At any meeting of the Association, members holding 20 percent of the voting rights, present in person, by proxy or by absentee ballot, if permitted by the board of directors, shall constitute a quorum. At any meeting of the Association where the members will be voting on decisions affecting only one category of unit or one class of director (Commercial or Yellow Gate Hangar), then members holding 20 percent of the voting rights of the respective class, present in person, by proxy or by absentee ballot (if permitted by the board of directors), shall constitute a quorum of that class or category. The subsequent joinder of a unit owner in the action taken at a meeting by signing and concurring in the minutes of the meeting shall constitute the presence of such person for the purpose of determining a quorum. When a quorum is once present to organize a meeting, it cannot be broken by the subsequent withdrawal of a unit owner or owners. If any meeting of members cannot be organized because of a lack of quorum, the members who are present, either in person or by proxy, may adjourn the meeting from time to time until a quorum is present.

2.12 **Majority Vote**. The vote of the holders of more than 50 percent of the voting rights of the members with authority to make a given decision or to give their approval to an action of the Association, present in person or by proxy at a meeting at which a quorum is constituted, shall be binding on all unit owners for all purposes unless a higher percentage vote is required by law, by the Declaration, or by these Bylaws.

2.13 **Continued Votes**. If at a meeting to consider action on a Major Decision, as defined in Section 2.8, insufficient votes are cast to approve the action, then the action shall be deemed rejected. The meeting or vote may not be continued in order to obtain additional votes. Any further voting on such matter must be taken at a new duly called meeting at which new votes must be cast in person or by proxy.

2.14 **Order of Business**. The order of business at annual meetings of the Association shall be:

(a) Calling of the roll and certifying of proxies;

(b) Proof of notice of meeting or waiver of notice;

(c) Reading of minutes of preceding meeting;

(d) Reports of officers;

(e) Reports of committees, if any;

(f) Election of directors;

(g) Unfinished business;

(h) New business; and

(i) Adjournment.

2.15 **Rules of Order**. Unless other rules of order are adopted by resolution of the Association or the board of directors, all meetings of the Association shall be conducted according to the latest edition of *Robert's Rules of Order* published by Robert's Rules Association.

Article 3

BOARD OF DIRECTORS

3.1 **Number and Qualification**. The affairs of the Association shall be governed by a board of directors composed of one to three interim directors or from three to seven regular directors, as provided in Sections 3.2 and 3.3 of this Article. All directors, other than interim directors appointed by Declarant, shall be owners or co-owners of units of the Condominium. For purposes of this Section, an officer, employee or agent of a corporation, a member, manager, employee or agent of a limited liability company, or a partner, employee or agent of a partnership may serve on the board if such corporation, limited liability company or partnership is an owner or co-owner of a unit. In addition, a trustee may serve on the board if the trustee holds legal title to a unit for the benefit of the owner of the beneficial interest in the unit; and an executor, administrator, guardian, conservator or other individual appointed by a court to serve in a fiduciary capacity for an owner of a unit, or an officer or employee of an entity if an entity is appointed, may serve on the board.

3.2 **Interim Directors**. Upon the recording of the Declaration submitting the Condominium to the Oregon Condominium Act Declarant shall appoint an interim board of one to three directors, who shall serve until replaced by Declarant or their successors have been elected by the unit owners as provided below.

3.3 **Election and Term of Office**. At the first organizational and turnover meeting called by Declarant pursuant to Section 2.2 of these Bylaws (the "**Turnover Meeting**"), the interim directors shall resign and successors shall be elected as follows. There shall be two classes of directors, Commercial Directors (who shall be owners of either Commercial Hangar Units or other types of unit(s) that may be established in any supplemental declaration the permitted use of which is the same as Commercial Hangar Units) and Yellow Gate Hangar Directors (who shall be owners of Yellow Gate Hangar Units). Three Yellow Gate Hangar Directors shall be elected by the Yellow Gate Hangar Unit owners based upon the voting rights assigned to such units, one to serve until the next annual meeting and two to serve until the second annual meeting after his or her election. If prior to the Turnover Meeting, Commercial Units have been annexed to the Condominium, then at the Turnover Meeting the Commercial Directors shall be elected by the Commercial Unit owners. If there are no Commercial Units in the Condominium at the time of the Turnover Meeting, then the first Commercial Directors shall be elected at the first Association annual meeting following annexation of Additional Property that includes at least one Commercial Unit. At the first election of Commercial Directors, (i) two, or (ii) one-third of the number of Commercial Units (whichever is greater subject to limitation as set forth below) Commercial Directors shall be elected by the Commercial Unit owners, a majority of which directors shall serve until the second annual meeting after his or her

election and the remainder to serve until the first annual meeting after his or her election. In both elections (of Yellow Gate Hangar Directors and of Commercial Directors) the directors receiving the greatest number of votes shall serve for the two-year term. In the event of a tie, the terms shall be determined by lottery. Thereafter, at the expiration of the initial term of office of each respective director, his or her successor shall be elected to serve for a term of two years, so that the term of less than half of the directors shall expire annually. Directors shall hold office until their respective successors have been elected by the unit owners. Election shall be by plurality of the members eligible to elect their respective class of directors. Notwithstanding anything to the contrary in this Section, the maximum number of Commercial Directors serving on the board shall be four. In the event that no Commercial Hangar Units have been annexed to the Condominium, the board of directors shall consist of three Yellow Gate Hangar Directors, all of whom shall be Yellow Gate Hangar Unit owners or co-owners, as defined in Section 3.1 above.

3.4 **Vacancies**. Vacancies in Commercial Directors caused by any reason other than the removal of a director by a vote of the Association shall be filled by the Commercial Unit owners. Vacancies in Yellow Gate Hangar Directors caused by any reason other than the removal of a director by a vote of the Association shall be filled by vote of the remaining Yellow Gate Hangar Directors. Each person so elected shall be a director elected to fill the unexpired term at the next annual meeting of the Association or the next special meeting of the Association called for that purpose. Vacancies shall be filled by the Yellow Gate Hangar or Commercial Unit owners, respectively, who elected the director. Vacancies in interim directors shall be filled by Declarant.

3.5 **Removal of Directors**. At any regular or special meeting of the Association duly called, any one or more of the directors, other than interim directors, may be removed with or without cause by a majority vote of the unit owners present in person or by proxy by the Yellow Gate Hangar or Commercial Unit owners, respectively, who elected the director. A successor shall be so elected at that meeting to fill the vacancy thus created. The unit owners must vote on the removal of each director separately. The notice and agenda of any such meeting shall state that such removal is to be considered, and any director whose removal has been proposed shall be given an opportunity to be heard at that meeting and prior to the vote. A removed director shall remain a director until the vacancy has been filled.

3.6 **Powers and Duties**. The board of directors shall have all the powers and duties necessary for the administration of the affairs of the Association, except such powers and duties that by law or by the Declaration or by these Bylaws may not be delegated to the board by the unit owners; provided, however, that the board may not take any action that could unreasonably interfere with the sale, lease or other disposition of units owned by Declarant or that could abridge, modify, eliminate or otherwise affect any right, power, easement, privilege or benefit reserved for Declarant or that would impose any discriminatory charge or fee against Declarant, without the prior written consent of Declarant. The powers and duties to be exercised by the board shall include, but shall not be limited to the following:

(a) Operation, care, upkeep, maintenance, repair and replacement of the general and limited common elements and Association property, except those limited common elements to be maintained by the unit owners, as provided in the Declaration or these Bylaws.

(b) Determination of the amounts required for operation, maintenance and other affairs of the Association, and the making of such expenditures.

(c) Preparation and adoption of budgets, preparation, review and update of reserve studies and establishment of reserves, if any, and assessment and collection of the common expenses, all in accordance with the provisions of these Bylaws and the Declaration.

(d) Employment and dismissal of such personnel as necessary for the efficient maintenance, upkeep and repair of the common elements.

(e) Employment of legal, accounting or other personnel for reasonable compensation to perform such services as may be required for the proper administration of the Association; provided, however, the board may not incur or commit the Association to incur legal fees in excess of $5,000 for any specific litigation or claim matter or enter into any contingent fee contract on any claim in excess of $100,000 unless the unit owners have enacted a resolution authorizing the incurring of such fees or contract by a vote of 75 percent of the total voting rights of the Association. These limitations shall not be applicable to legal fees incurred in defending the Association and the board of directors from claims or litigation brought against them. The limitations set forth in this paragraph shall increase by 10 percent on each fifth anniversary of the recording of the Declaration.

(f) Opening of bank accounts on behalf of the Association and designating the signatories required therefor.

(g) Preparation and distribution of annual financial statements in accordance with these Bylaws and annual preparation and filing of all required income tax returns or forms for the Association.

(h) Borrowing money on behalf of the Association when required in connection with the operation, care, upkeep, and maintenance of the common elements and Association property; provided, however, that (i) the consent of 75 percent of the voting rights shall be required for the borrowing of any sum in excess of an amount or amounts, aggregated for the calendar year in question, exceeding 15 percent of the estimated budget of the Association for that calendar year to cover the operation, care upkeep and maintenance of the common elements, and (ii) no lien to secure repayment of any sum borrowed may be created on any unit or its appurtenant interest in the common elements without the consent of the owner of such unit. If any sum borrowed by the board of directors on behalf of the Association pursuant to the authority contained in this paragraph is not repaid by the Association, a unit owner who pays to the creditor such proportion thereof equal to his interest in the common elements shall be entitled to obtain from the creditor a release of any judgment or other lien that the creditor shall have filed or shall have the right to file against such owner's unit.

(i) Purchasing units of the Condominium at foreclosure or other judicial sales in the name of the Association, or its designee, on behalf of all the unit owners as provided in these Bylaws, and selling, leasing, mortgaging, voting the votes appurtenant to (other than for the election of directors), or otherwise dealing with units of the Condominium acquired by the Association or its designee on behalf of all the unit owners.

(j) Obtaining insurance pursuant to the provisions of these Bylaws and at least annually reviewing the insurance coverage of the Association.

(k) Making additions and improvements to, or alterations of, the common elements; provided, however, that no such project may be undertaken by the board of directors if the total cost will exceed $20,000 unless the unit owners have enacted a resolution authorizing the project by a majority vote of the members, except that no such vote shall be required for work that is urgently needed for reasons of life, safety or structural integrity. This limitation shall not be applicable to maintenance, repairs or replacement undertaken pursuant to paragraph (a) above. The limitation set forth in this paragraph shall increase by $1,000 on each anniversary of the recording of the Declaration.

(l) Modify, close, remove, eliminate or discontinue the use of a general common element facility or improvement or portion of the common element landscaping, except that modification, closure, removal, elimination or discontinuance other than on a temporary basis of any aircraft taxilane or ramp must be approved by at least a majority of the unit owners voting on such matter at a meeting or by written ballot held or conducted in accordance with these Bylaws.

(m) Designating one or more committees that, to the extent provided in the resolution designating the committee, shall have the powers of the board of directors in the management of the affairs of the Association. At least one member of each committee shall be a member of the board.

(n) Enforcement by legal means of the provisions of the Oregon Condominium Act, the Declaration, these Bylaws and any rules and regulations adopted hereunder. Nothing in these Bylaws shall be construed as requiring the Association to take any specific action to enforce violations.

(o) Maintain a current mailing address for the Association, file an Annual Report and any amendment in accordance with ORS 100.250, and maintain and keep current the information required to enable the Association to comply with ORS 100.480(8).

(p) Subject to the restrictions in subsection (e) above, initiate or intervene in litigation or administrative proceedings (including mediation under Article 10 of these Bylaws) in the name of the Association, and without joining the individual unit owners, as permitted under ORS 100.405(4)(e) and (11); provided that no litigation or administrative proceeding may be initiated on a matter relating to or affecting the unit or interest of a unit owner unless the unit owner has consented in writing to such action after full disclosure of the potential cost, duration and possible outcomes of the proposed litigation or administrative proceeding. To the extent required by ORS 100.490, the board shall notify the owners prior to instituting litigation or administrative proceedings. With regard to any pending litigation involving the Association, the board shall periodically report to the unit owners as to the status (including settlement offers), progress, and method of funding such litigation. Nothing in this paragraph shall be construed as requiring the board of directors to disclose any privileged communication between the Association and its counsel.

3.7 **Managing Agent or Manager**. On behalf of the Association, the board of directors shall employ or contract for a managing agent or a manager at a compensation to be established by the board. The board may delegate to the managing agent or manager such duties and powers as the board may authorize. In the absence of such appointment, the board shall act as manager. The managing agent shall have the right to contract with any unit owner, individually or collectively with other unit owners, for personal services for a particular unit or units.

3.8 **Contracts Entered into by Declarant or Interim Board**. Notwithstanding any other provision of these Bylaws, any management contracts, service contracts or employment contracts entered into by Declarant or the interim board on behalf of the Association shall have a term not in excess of three years. In addition, any such contract shall provide that it may be terminated without cause or penalty by the Association or board of directors upon not less than 30 days' notice to the other party given not later than 60 days after election of the permanent board at the organizational and turnover meeting described in Section 2.2 of these Bylaws. The limitations contained in this Section 3.8 shall not apply to those contracts referred to in ORS 100.485(2).

3.9 **Organizational Meeting**. Unless otherwise agreed by the board of directors, within 14 days following the annual meeting of the Association or following any meeting at which an election of directors has been held, the board shall hold an organizational meeting at such place and time as shall have been fixed by the directors at the meeting at which the election was held.

3.10 **Regular and Special Meetings**. Regular meetings of the board of directors may be held at such time and place as shall be determined, from time to time, by a majority of the directors. Special meetings of the board may be called by the chairperson and must be called by the secretary at the written request of at least two directors. Notice of any special meeting shall be given to each director, personally or by mail, telephone or, to the extent permitted by the Oregon Condominium Act, by electronic mail, facsimile or other form of electronic communication acceptable to the board at least seven days prior to the day named for such meeting, and shall state the time, place and purpose of such meeting. For a period of 10 years following closing of the sale of the last unit by Declarant to a person other than a successor declarant, notices of meetings (including agendas) shall also be given to Declarant in the same manner as given to the directors. Unless other rules of order are adopted by resolution of the Association or the board, all meetings of the board shall be conducted according to the latest edition of *Robert's Rules of Order* published by Robert's Rules Association.

3.11 **Open Meetings**. All meetings of the board of directors shall be open to unit owners and, for a period of 10 years following closing of the sale of the last unit by Declarant to a person other than a successor declarant, to Declarant or a representative of Declarant; except that, in the discretion of the board, the board may close the meeting to owners other than board members and meet in executive session to consult with legal counsel or to consider personnel matters, including salary negotiations and employee discipline, negotiation of contracts with third parties or collection of unpaid assessments. Except in the case of an emergency, the board shall vote in an open meeting whether to meet in executive session. If the board votes to meet in executive session, the presiding officer shall state the general nature of the action to be

considered, as precisely as possible, when and under what circumstances the deliberations can be disclosed to owners. The statement, motion or decision to meet in the executive session shall be included in the minutes of the meeting, and any contract or action considered in executive session shall not become effective unless the board, following the executive session, reconvenes in open meeting and votes on the contract or action, which shall be reasonably identified in the open meeting and included in the minutes. The different classes of directors shall not hold separate meetings or separate executive sessions apart from the other class of directors.

Meetings of the board of directors may be conducted by telephonic communication or by other means of communication that allows all members of the board participating to hear each other simultaneously or otherwise to be able to communicate during the meeting, except that if a majority of the units are principal residences of the occupants, then: (i) for other than emergency meetings, notice of each board's meeting shall be posted at a place or places on the property at least three days prior to the meeting, or notice shall be provided by a method otherwise reasonably calculated to inform the unit owners of such meeting; and (ii) only emergency meetings of the board may be conducted by telephonic communication or such other means. The meeting and notice requirements of this Section may not be circumvented by chance or social meetings or by any other means.

3.12 **Waiver of Notice**. Any director may, at any time, waive notice of any meeting of the board of directors in writing, and such waiver shall be deemed equivalent to the giving of such notice. Attendance by a director at any meeting of the board shall constitute a waiver of notice by such director, unless the director attends the meeting for the express purpose of objecting to the transaction of any business because the meeting is not lawfully called or convened. If all of the directors are present at any meeting of the board, no notice to directors shall be required and any business may be transacted at such meeting.

3.13 **Quorum of Board of Directors**. At all meetings of the board of directors, a majority of the directors shall constitute a quorum for the transaction of general business, or in the case of business or decisions for which only one class of directors has authority to decide, a majority of that certain class of directors shall constitute a quorum for the transaction of class-specific business. The agreement of both classes of directors as set forth in Section 3.17 below shall constitute the decision of the board for matters of general business to be determined by the whole board. In any case, a majority of the members of a class of directors, e.g., Commercial Directors or Yellow Gate Hangar Directors, shall constitute a quorum for determinations to be made exclusively by such class of directors as set forth in Section 3.17 below. The vote of a majority of the voting rights of any given class of directors shall constitute the decision of that class of directors of the board. If at any meeting of the board less than a quorum is present, a majority of those present may adjourn the meeting from time to time. At any such adjourned meeting at which a quorum is present, any business that might have been transacted at the meeting originally called may be transacted without further notice to the directors.

3.14 **Voting**. A director who is present at a meeting of the board of directors at which action is taken on any Association matter is presumed to have assented to the action (to the extent that his or her class of directors had the authority to vote on such matter), unless the director votes against the action or abstains from voting on the action because the director claims a conflict of interest. When action is taken on any matter at a meeting of the board, the vote or

abstention of each director present must be recorded in the minutes of the meeting. Directors may not vote by proxy or by secret ballot at meetings of the board, except that officers may be elected by secret ballot.

3.15 **Compensation**. No director shall receive any compensation from the Association for acting as director.

3.16 **Deadlock Resolution**. If the board of directors, or the Commercial or Yellow Gate Hangar Directors as to a decision to be made by only that certain class of directors, are respectively deadlocked on any matter properly before the board or such class of directors in accordance with these Bylaws, and the matter cannot be settled through direct discussions, the board or such class of directors shall resolve the matter by mediation within ten (10) business days following the date of the meeting. The mediation will be held in Clackamas or Marion County, Oregon by a mediator selected by the board. If the board cannot agree upon a mediator, then one shall be selected through the process provided by a recognized mediation service designated by the first director who notifies the others of the mediation service selected. Thereafter, if the matter cannot be resolved by mediation, the matter shall be resolved by arbitration as provided in Section 10.3 below.

3.17 **Determinations by Board of Directors.** All determinations of the permanent board of directors (as opposed to the interim board) are of three types: (i) those that affect only the Yellow Gate Hangar Units and Yellow Gate Hangar Limited Common Elements, and do not in any way affect directly or indirectly the Commercial Hangar Units or the Commercial Unit Limited Common Elements ("**Yellow Gate Hangar Decisions**"); (ii) those that affect only Commercial Hangar Units or the Commercial Unit Limited Common Elements, and do not in any way affect directly or indirectly the Yellow Gate Hangar Units or Yellow Gate Hangar Limited Common Elements ("**Commercial Hangar Decisions**"); and, (iii) all other decisions directly or indirectly affecting the Commercial Units, on the one hand, and Yellow Gate Hangar Units, on the other hand, or their respective limited common elements ("**General Board Decisions**"). General Board Decisions shall be made unanimously as between the two classes of directors, Commercial and Yellow Gate Hangar Directors. Yellow Gate Hangar Decisions and class voting for General Board Decisions shall be made by a majority of the Yellow Gate Hangar Directors. Commercial Hangar Decisions and class voting for General Board Decisions shall be made by a majority of the Commercial Directors. Any rules and regulations adopted by either the Yellow Gate Hangar Directors or Commercial Directors pursuant to Section 7.5(p) below may be modified or revoked only by the class of directors who originally adopted them. The vote of each class of directors for such General Board Decisions shall be made by a majority of the members of all such directors present at a meeting at which a quorum is present. To clarify, for purposes of this Section, any decision by the board that will affect or that may be reasonably expected to affect the operation of either the Commercial Units or the Yellow Gate Hangar Units, respectively, or any other new classification of unit type that Declarant may create pursuant to a supplemental declaration, or the business of the tenants or occupants of such type of unit, or the general appearance, quality or character of such units, or that may require the consent or approval of the holder of any mortgage (fee or leasehold) on a certain type of unit, shall be deemed to be a decision affecting that type of unit for purposes of authority of the class of directors to make such decisions or to take such actions. Approvals of annual operating budgets, reserve studies, and insurance policies shall be deemed General Board Decisions.

3.18 **Liability and Indemnification of Directors, Officers and Manager**. A member of the board of directors or an officer of the Association shall not be liable to the Association, any unit owner or any third party for any damage, loss or prejudice suffered or claimed on account of any action or failure to act in the performance of his or her duties as long as the individual acted in good faith, believed that the conduct was in the best interests of the Association, or at least was not opposed to its best interests, and in the case of criminal proceedings, had no reason to believe the conduct was unlawful. A director appointed under Section 3.2 of these Bylaws and Section 14.4 of the Declaration, or acting under ORS 100.200, shall not be liable to the Association, any unit owner or any third party under ORS 65.357-65.361, ORS 100.417 or associated rules of common law for any damage, loss or prejudice suffered or claimed on account of any action or failure to act that represents the exercise of authority established in Section 14.4 of the Declaration and ORS 100.200, including any action or failure to act requested by Declarant or resulting from any prior or concurrent duty or loyalty owed by such director to Declarant; provided that nothing in this section limits the liability of Declarant for such actions or failure to act by a director. If any member of the board or any officer of the Association is threatened with or made a party to any proceeding because the individual was or is a director or officer of the Association, the Association shall defend the individual against such claims and indemnify the individual against liability and expenses incurred to the maximum extent permitted by law. The manager of the Association, and its officers and employees, shall not be liable to the Association, the unit owners or any third party on account of any action or failure to act in the performance of its duties as manager, except for acts of gross negligence or intentional acts. Prior to the organizational and turnover meeting described in Section 2.2, the manager shall not be liable to the Association, any unit owner or any third party for any damage, loss or prejudice suffered or claimed on account of any action or failure to act that represents the exercise of authority established in Section 14.4 of the Declaration and ORS 100.200, including any action or failure to act requested by Declarant or resulting from any prior or concurrent duty or loyalty owed by such director to Declarant; provided that nothing in this Section limits the liability of Declarant for such actions or failure to act by the manager. If the manager is threatened with or made a party to any proceeding, the Association shall defend the manager against such claims and indemnify the manager and its officers and employees from any such claims to the maximum extent permitted by law.

3.19 **Insurance**. The board of directors shall obtain the insurance required in Article 8 of these Bylaws. In addition, the board, in its discretion, may obtain such other insurance as it deems necessary to protect the interests of the Association or unit owners. The board shall conduct an annual insurance review that, if appropriate, shall include an appraisal of all improvements contained in the Condominium.

Article 4

OFFICERS

4.1 **Designation**. The principal officers of the Association shall be the chairperson, the secretary and the treasurer, all of whom shall be elected by the board of directors. The directors may appoint a vice chairperson, an assistant treasurer, an assistant secretary, and such other officers as in their judgment may be necessary. The chairperson shall be a member of the board, but the other officers need not be directors or unit owners.

4.2 **Election of Officers**. The officers of the Association shall be elected annually by the board of directors at the organizational meeting of each new board and shall hold office at the pleasure of the board. If any office shall become vacant, the board shall elect a successor to fill the unexpired term at any regular meeting of the board, or at any special meeting of the board called for such purpose.

4.3 **Removal of Officers**. Upon the affirmative vote of a majority of the directors, any officer may be removed either with or without cause, and a successor may be elected at any regular meeting of the board of directors, or at any special meeting of the board called for such purpose.

4.4 **Chairperson**. The chairperson shall be the chief executive officer of the Association. He or she shall preside at all meetings of the Association and of the board of directors. The chairperson shall have all of the general powers and duties that are usually vested in the chief executive officer of an association, including but not limited to the power to appoint committees from among the unit owners from time to time as the chairperson may in his or her discretion decide is appropriate to assist in the conduct of the affairs of the Association.

4.5 **Secretary**. The secretary shall keep or supervise the keeping of the minutes of all proceedings of the board of directors and the minutes of all meetings of the Association. He or she shall attend to the giving and serving of all notices to the unit owners and directors and other notices required by law. The secretary shall keep the records of the Association, except for those of the treasurer, and shall perform all other duties that are incidental to the office of secretary of an association and as may be required by the directors or the chairperson. In addition, the secretary shall act as vice chairperson, taking the place of the chairperson and performing the chairperson's duties whenever the chairperson is absent or unable to act, unless the directors have appointed another vice chairperson.

4.6 **Treasurer**. The treasurer shall have the responsibility for Association funds and securities and shall be responsible for keeping full and accurate financial records and books of account showing all receipts and disbursements, and for the preparation of required financial statements. He or she shall be responsible for overseeing the deposit of all moneys and other valuable effects in such depositories as may from time to time be designated by the board of directors, and shall disburse or cause to be disbursed funds of the Association upon properly authorized vouchers. The treasurer shall perform all other duties incident to the office of treasurer of an association and such other duties as may be assigned to him or her by the board of directors.

4.7 **Execution of Instruments**. All agreements, contracts, deeds, leases and other instruments of the Association, except checks, shall be executed by such person or persons as may be designated by general or special resolution of the board of directors and, in the absence of any general or special resolution applicable to any such instrument, then such instrument shall be signed by the chairperson. All checks shall be signed by the manager or by the treasurer, or in the absence or disability of the treasurer, by the chairperson or any duly elected assistant treasurer.

4.8 **Compensation of Officers**. No officer who is a member of the board of directors shall receive any compensation from the Association for acting as an officer, unless such compensation is authorized by a resolution duly adopted by the unit owners. The board may fix any compensation to be paid to any officers who are not also directors.

Article 5

BUDGET, EXPENSES AND ASSESSMENTS

5.1 **Budget**. The board of directors shall from time to time, and at least annually, prepare a budget for the Association, estimate the common expenses expected to be incurred, less any previous over assessment and plus any underassessment, and assess the common expenses to each unit owner in the proportion set forth in the Declaration. Within 30 days after adopting the annual budget, the board of directors shall provide a summary of the budget to all owners. If the board fails to adopt an annual budget, the last adopted budget shall continue in effect.

5.2 **Determination of General Expenses**. General Expenses shall include:

(a) Expenses of administration, including management fees.

(b) Expenses of operation, maintenance, repair or replacement of common elements, any other portions of the Condominium required to be maintained by the Association pursuant to the Declaration or these Bylaws, and any Association property.

(c) Cost of insurance or bonds for or in respect of general common elements, the board of directors, or the administration of the Association, which is obtained in accordance with these Bylaws. To clarify, the cost of property insurance covering only Yellow Gate Hangar Limited Common Elements or only Commercial Limited Common Elements shall be shared by those respective units as Specially Allocated Expenses pursuant to Section 8.2 of the Declaration.

(d) A general operating reserve, including an amount sufficient to cover the deductible under the property damage insurance policy.

(e) Reserves (if established by the board of directors) for replacements, repairs and maintenance of common elements for which the Association has the responsibility to maintain.

(f) Costs, if any, associated with appurtenant easements benefitting the Condominium.

(g) Any deficit in common expenses for any prior period.

(h) Utilities and services for the common elements and other utilities and services with a common meter or commonly billed, such as trash collection, fire and safety or security monitoring for the Condominium, or water and sewer, including well maintenance costs, if any. If the board of directors determines that a particular unit's use of such services is greater

than the average of other unit owners', the board may assess such owner for the cost attributable to such extra use.

(i) Any other items properly chargeable as an expense of the Association, which is not allocated as a Specially Allocated Expense.

If the board of directors determines that a particular unit's use results in an increase in the premiums for one or more of the Association's insurance policies, or that a particular unit's use or a class of units' use of common elements or services provided by the Association is greater than the average of other units or type of units, the board may assess to such unit owner(s) the cost attributable to the extra use or impact as an Individual Expense or other Specially Allocated Expense, in its reasonable judgment, in accordance with Section 8 of the Declaration. A unit owner or a group of unit owners affected by such categorization or allocation of expenses may give the board of directors notice requesting review of such allocation or categorization and an opportunity to be heard. If following such review and opportunity to be heard the issue is not resolved, the dispute resolution process described in Article 10 shall apply, notwithstanding anything to the contrary therein.

5.3 **Assessment of Common Expenses.**

(a) **Obligation to pay**. All unit owners shall be obligated to pay common expenses assessed to them by the board of directors on behalf of the Association pursuant to these Bylaws and the Declaration. No unit owner by the owner's own action may claim exemption from liability for contribution toward common expenses by waiver by the owner of use or enjoyment of any of the common elements or by abandonment by the owner of the owner's unit. A unit owner may not claim an offset against an assessment for failure of the Association to perform its obligations and no unit owner may offset amounts owing or claimed to be owing by the Association or Declarant to the unit owner. If the board determines that any loss or cost incurred by the Association is the fault of one or more unit owners, the Association may assess the amount of the loss or cost exclusively against the units of the responsible owners. Declarant shall be assessed as the unit owner of any unsold unit, but such assessments shall be prorated to the date of sale of the unit. The board, on behalf of the Association, shall assess the common expenses against the unit owners from time to time, and at least annually, and shall take prompt action to collect from a unit owner any common expense due that remains unpaid for more than 30 days from the due date for its payment. The board may elect to round assessments to the nearest dollar.

(b) **Commencement of regular operating expense assessments**. Regular monthly assessments for common operating expenses for units in the first stage of the Condominium shall commence upon closing of the first sale of a unit in such stage of the Condominium and for subsequent stages shall commence for all units in such stage upon recording of the applicable Supplemental Declaration.

(c) **Commencement of assessment for replacement reserves**. If established by the board of directors, regular monthly assessments for replacement reserves as described in Section 5.5 for all units in the Condominium shall commence upon the closing of the sale or transfer of the first unit in the Condominium to a person other than the Declarant or upon the

establishment of a reserve fund by the board of directors, in its discretion. Such reserve assessments shall commence with respect to subsequent stages upon recording of the applicable supplemental declaration for such stage. Declarant may elect to defer payment of such reserve assessments to the Association for each unit owned by Declarant until the closing of the sale of such unit, but not beyond the date of the turnover meeting referred to in Section 2.2 above, or if no turnover meeting is held, the date on which the owners assume administrative control of the Association. The books and records of the Association shall reflect the amount owing from Declarant for all reserve assessments.

(d) **Annexation of additional stages**. If additional units are annexed to the Condominium, the board of directors shall promptly prepare a new budget reflecting the addition to the Condominium and shall recompute any previous assessment covering any period after the closing of the sale of the first unit in the new stage.

5.4 **Special or Extraordinary Assessments**.

(a) **Special assessments for capital improvements**. In the case of any duly authorized capital improvement to the common elements, the board of directors may by resolution establish separate assessments for the same, which may be treated as capital contributions by the unit owners, and the proceeds of which shall be used only for the specific capital improvements described in the resolution. The Association shall not assess units owned by Declarant for additional capital improvements to the Condominium without the written consent of Declarant as long as Declarant owns more than 20 percent of the units then submitted to the Condominium or as long as the time specified in the Declaration for annexing additional stages has not expired.

(b) **Other special or extraordinary assessments**. If the board of directors determines that the assessments established upon adoption of the budget as provided in Section 5.1 above will be insufficient to pay the common expenses, or the board determines that additional funds will be needed to meet unexpected or unbudgeted common expenses, the board may levy an additional special or extraordinary assessment against those units to which such expenses are allocable. Such assessment shall be allocated to each unit in the same proportion set forth in the Declaration and may be payable in installments over a specified period, in a lump sum, or in a lump sum with option to pay in installments with interest, as determined by the board.

Any special or extraordinary assessment assessed by the board of directors shall be made in accordance with the allocation of assessments for General Expenses or Specially Allocated Expenses, as the case may be as set forth in Article 8 of the Declaration, and shall be subject to the dispute resolution process set forth therein.

5.5 **Replacement Reserves**.

(a) **Establishment of account**. In its discretion, the board of directors may conduct an initial reserve study as described in paragraph (c) of this Section and establish a reserve account to fund major maintenance, repair or replacement of those common elements all or a part of which will normally require replacement in more than one and less than 30 years, and

for exterior painting if the common elements include exterior painted surfaces. The reserve account need not include those items that can reasonably be funded from the general budget or other funds of the Association or for common elements for which maintenance and replacement are the responsibility of one or more, but less than all, unit owners under the provisions of the Declaration or these Bylaws.

(b) **Funding of account**. If established by the board of directors, the reserve account shall be funded by assessments against the individual units for the purposes for which the reserve account is being established, which sums shall be included in the regular monthly assessment for the unit. The reserve account shall be established in the name of the Association, which shall be responsible for administering the account and for making periodic payments into the account. The board of directors or the unit owners may not vote to eliminate funding the reserve account unless the board determines that the reserve account will be adequately funded for the following year, except that after the Turnover Meeting the board, with the approval of 75 percent of the voting power of the unit owners, may, on an annual basis, elect not to fund the reserve fund for the following year.

(c) **Reserve studies**. The board of directors annually shall conduct a reserve study or review and update an existing study to determine the reserve account requirements for the items described in paragraph (a) of this Section and may adjust the amount of payments in accordance with the study or review and may provide for other reserve items that the board, in its discretion, may deem appropriate. The reserve account need not include items that could reasonably be funded from operating assessments. The reserve study shall:

(1) Identify all items for which reserves are or will be established;

(2) Include, the estimated remaining useful life of each item as of the date of the reserve study; and

(3) Include for each item, as applicable, an estimated cost of maintenance and repair and replacement at the end of the item's useful life.

(d) **Use of reserve funds**. The reserve account shall be used only for the purposes for which the reserves have been established and shall be kept separate from other funds. After the organizational and turnover meeting described in Section 2.2, however, the board of directors may borrow funds from the reserve account to meet high seasonal demands on the regular operating funds or to meet unexpected increases in expenses if the board has adopted a resolution, which may be an annual continuing resolution, authorizing the borrowing of funds. No later than the adoption of the budget for the following year, the board shall adopt by resolution a written payment plan providing for repayment of the borrowed funds within a reasonable period.

(e) **Sale of units**. Assessments paid into the reserve account are the property of the Association and are not refundable to sellers of units. Sellers of the units, however, may treat their outstanding share of the reserve account as a separate item in any sales agreement.

(f) **Investment of reserve account**. Nothing in this Section shall prohibit prudent investment of the reserve account; provided that any investment of the reserve account is made in compliance with the Oregon Condominium Act.

5.6 **Default in Payment of Assessments**.

(a) **Interest**. In the event of default by any unit owner in paying any assessments to the Association, including assessed common expenses and any other charge imposed or levied by the Association pursuant to the provisions of the Declaration, these Bylaws or the Oregon Condominium Act, such unit owner shall be obligated to pay interest at the rate of 12 percent per annum on such assessment from the due date thereof, or at such greater rate as may be established by the board of directors from time to time, not to exceed the maximum lawful rate, if any.

(b) **Late charges and expenses**. The defaulting unit owner shall pay a late charge for any assessment not paid within 10 days of its due date in the amount of five percent of the delinquent payment, or such other reasonable late charge or administrative fee, or both, as may be established by the board of directors from time to time by resolution that is delivered to each unit, mailed to the mailing address of each unit or mailed to the mailing address designated by the unit owner in writing, together with all expenses incurred by the Association in collecting such unpaid assessments, including attorneys' fees (whether or not suit is instituted, and at trial or any appeal or petition for review therefrom).

(c) **Acceleration**. If the assessment is not paid within 30 days of its due date, the board of directors may declare any remaining installments of assessments for the balance of the fiscal year immediately due and payable and may terminate the right to receive utility services paid for out of assessments or the right of access to and use of service facilities of the Condominium until assessments have been brought current.

(d) **Enforcement**. The board of directors shall have the right to recover for the Association such assessments, together with such charges, interest and expense of the proceeding, including attorneys' fees, by an action brought against such unit owner or by foreclosure of the lien upon the unit granted by the Oregon Condominium Act. Each unit owner assigns to the Association all rents, revenues, income, issues and profits from the unit to secure such obligations.

(e) **Notices to first Mortgagees**. The board of directors shall notify the holder of any first Mortgage upon a unit of any default not cured within 60 days of the date of default.

5.7 **Foreclosure of Liens for Unpaid Assessments**. In any suit brought by the Association to foreclose a lien on a unit because of unpaid assessments, the unit owner shall be required to pay a reasonable rental for the use of the unit during the pendency of the suit, and the plaintiff in such foreclosure suit shall be entitled to the appointment of a receiver to collect such rental. The board of directors, acting on behalf of the Association, shall have the power to purchase such unit at the foreclosure sale and to acquire, hold, lease, mortgage, vote the votes appurtenant to, convey, or otherwise deal with the unit. A suit or action to recover a money

judgment for unpaid assessments shall be maintainable without foreclosing the liens securing them.

5.8 **Statement of Assessments**. The board of directors shall advise each unit owner in writing of the amount of assessments payable by such owner, and furnish copies of each budget on which such assessments are based to all unit owners and, if requested, to their Mortgagees. The board shall promptly provide any unit owner who makes a request in writing with a written statement of the owner's unpaid assessments.

5.9 **Priority of Lien; First Mortgages**. To the extent provided by the Oregon Condominium Act, any lien of the Association against a unit for assessments shall be subordinate to tax and assessment liens and any first Mortgage of record. Unless otherwise provided in the Oregon Condominium Act, if the purchaser or Mortgagee of a unit obtains title to the unit as a result of foreclosure of a first Mortgage, such purchaser or Mortgagee, its successors and assigns, shall only be liable for a maximum of six months of the assessments that are chargeable to such unit and that became due prior to the acquisition of title to the unit by such purchaser or Mortgagee. Any additional unpaid share of assessments shall be a common expense and be reallocated on a pro rata basis for all units, including the Mortgaged unit. The purchaser or Mortgagee shall not be relieved of the obligation to pay further assessments. A deed in lieu of foreclosure accepted by the holder of a first Mortgage shall extinguish a lien filed by the Association to secure unpaid assessments under the circumstances described in ORS 100.465.

5.10 **Voluntary Conveyance**. In a voluntary conveyance of a unit, the grantee shall be jointly and severally liable with the grantor for all unpaid assessments against the grantor of the unit up to the time of the grant or conveyance, without prejudice to the grantee's right to recover from the grantor the amounts paid by the grantee therefor. However, upon request of an owner or an owner's agent, for the benefit of a prospective purchaser, the board of directors shall make and deliver a statement of the unpaid assessments against the prospective grantor or the unit effective through a date specified in the statement, and the grantee in that case shall not be liable for any unpaid assessments against the grantor not included in the written statement.

Article 6

RECORDS AND AUDITS

6.1 **General Records**. The board of directors and the manager, if any, shall keep detailed records of the actions of the board and the manager, minutes of the meetings of the board and minutes of the meetings of the Association. The board shall maintain a book of resolutions containing the rules, regulations and policies adopted by the Association, board and the manager. The board shall maintain a list of owners entitled to vote at meetings of the Association and a list of all Mortgagees of units. All documents, information and records delivered to the Association by Declarant pursuant to ORS 100.210 and other records of the Association shall be kept within the State of Oregon for the time periods specified in ORS 100.480.

6.2 **Financial Records and Accounts**. The board of directors or its designee shall keep within the State of Oregon financial records sufficient for proper accounting purposes and as required by the Oregon Condominium Act. All assessments shall be deposited and maintained in the name of the Association in one or more separate federally insured accounts, including certificates of deposit, at a financial institution as defined in ORS 706.008, other than an extranational institution. Such funds may be used to purchase obligations of the United States government. All expenses of the Association shall be paid from the Association's bank account.

6.3 **Assessment Roll**. The assessment roll shall be maintained in a set of accounting books in which there shall be an account for each unit. The account shall designate the name and address of the owner or owners, the amount of each assessment against the owners, the dates and amounts in which the assessment comes due, the amounts paid on the account and the balance due on the assessments.

6.4 **Payment of Vouchers**. The treasurer or manager shall pay all vouchers for all budgeted items and for any nonbudgeted items up to $3,000 signed by the chairperson, managing agent, manager or other person authorized by the board of directors. Any voucher for nonbudgeted items in excess of $3,000 (or such other amount as may be established by the board) shall require the authorization of the chairperson. Any checks written on reserve accounts must be signed by a member of the board.

6.5 **Reports and Audits**. An annual financial statement consisting of a balance sheet and income and expense statement for the preceding fiscal year shall be rendered by the board of directors to all unit owners and to all Mortgagees of units who have requested it within 90 days after the end of each fiscal year. Commencing with the fiscal year following the turnover meeting, if the annual assessments exceed $75,000 for the year, then the board shall cause such financial statements to be reviewed within 180 days after the end of the fiscal year by an independent certified public accountant licensed in Oregon in accordance with the Statements on Standards for Accounting and Review Services issued by the American Institute of Certified Public Accountants, or if the annual assessments are $75,000 or less, shall cause such review within 180 days after receipt of a petition requesting such review signed by owners holding at least a majority of the voting rights. The board need not cause such a review to be performed if so directed by an affirmative vote of unit owners holding at least 60 percent of the voting rights, not including votes of Declarant with respect to units owned by Declarant. Upon written request, any holder, insurer or guarantor of a first Mortgage shall be entitled to an audited financial statement for the immediately preceding fiscal year at the expense of the requesting party, if the statement is not otherwise available.

6.6 **Notice of Sale, Mortgage, Rental or Lease**. Upon the sale, mortgage, rental or lease of any unit, such unit owner shall promptly inform the secretary or manager of the name and address of the vendee, Mortgagee, lessee, or tenant.

6.7 **Availability of Records**. Except as otherwise provided in ORS 100.480, during normal business hours or under other reasonable circumstances, the Association shall make reasonably available for examination and, upon written request, available for duplication, by unit owners, lenders and holders, insurers or guarantors of any first Mortgage that make the request in good faith for a proper purpose, current copies of the Declaration, Bylaws, other rules

concerning the Condominium, amendments or supplements to such documents, and the books, records, financial statements and current operating budget of the Association. The Association also shall be required to make available to prospective purchasers current copies of the Declaration, Bylaws, other rules governing the Condominium, and the most recent annual audited financial statement, if such is prepared. The Association, within 10 business days after receipt of a written request by a unit owner, shall furnish copies of such documents to the requesting unit owner. Upon written request, the Association shall make such documents, information and records available to such persons for duplication during reasonable hours. The board of directors, by resolution, may adopt reasonable rules governing the frequency, time, location, notice and manner of examination and duplication of Association records and the imposition of a reasonable fee for furnishing copies of such documents, information or records. The fee may include reasonable personnel costs incurred to furnish the information.

6.8 **Statement of Assessments Due**. The Association shall provide, within 10 business days of receipt of a written request from an owner, a written statement that provides: (a) the amount of assessments due from the owner and unpaid at the time the request was received, including regular and special assessments, fines and other charges, accrued interest, and late payment charges; (b) the percentage rate at which interest accrues on assessments that are not paid when due; and (c) the percentage rate used to calculate the charges for late payment or the amount of a fixed rate charge for late payment. The Association is not required to comply with this Section if the Association has commenced litigation by filing a complaint against the owner and the litigation is pending when the statement would otherwise be due.

Article 7

MAINTENANCE AND USE OF CONDOMINIUM PROPERTY

7.1 **Maintenance and Repair**. Except as otherwise provided in Section 7.3 for damage or destruction caused by casualty:

(a) **Units**. All maintenance of and repairs to any unit shall be made by the owner of the unit, who shall keep the unit in good order, condition and repair. Owners of Attached Units shall do all repairs, maintenance, or painting to the interior of the unit that at any time may be necessary to maintain the good appearance and condition of the unit. For Freestanding Units, the unit owner's maintenance responsibility extends to all structural features that are part of the Freestanding Unit, including the painting, staining, maintenance, repair and timely replacement of the interior and all structural features of the unit, including the exterior walls and the roofing system. Each unit owner, regardless of the type of unit, shall be responsible for the maintenance, repair, and replacement of windows, glazing and window frames, access doors and frames, aircraft access doors and framing, automatic door openers and ancillary equipment; heating and air conditioning fixtures and ducting serving only the owner's unit and located in within the boundaries of the unit; any plumbing, telephones, water heaters, fans, vents, lighting fixtures, electrical outlets, which serve only the Owner's unit; any cabinetry, appliances and accessories, and any interior partitions or other structures that may be constructed within the boundaries of the unit or connected with the owner's unit, including those constructed by the unit owner within the boundaries of the unit. The Association, however, may repair or replace, at the Association's expense, portions of units to the extent reasonably necessary for the

preservation of the general appearance of the Condominium as a first-class aviation center or of the common elements in good condition and working order, if a unit owner fails to do so after written notice to such unit owner.

(b) **Common elements**. Except as otherwise provided in Section 11.1 of the Declaration, all maintenance, repairs and replacements to the general and limited common elements and to Association property and other General Expenses shall be made by the Association and shall be charged to all the unit owners as a common expense. The expense of maintaining, repairing and replacing the Yellow Gate Hangar Limited Common elements and services used only by the Yellow Gate Hangar Units, and other Yellow Gate Hangar Expenses, if any, shall be charged as a common expense only to the Yellow Gate Hangar Units. The expense of maintaining, repairing and replacing the Commercial Unit Limited Common Elements and services used only by the Commercial Units, and other Commercial Expenses, if any, shall be charged as a common expense only to the Commercial Units. Each unit owner, however, shall maintain the limited common element pertaining solely to such unit in a neat and well maintained condition and keep the limited common elements that pertain solely to the owner's unit in a safe, neat, clean and sanitary condition.

(c) **Skylights and roof-mounted equipment**. All maintenance, repairs and replacements of any roof-mounted heating or cooling, or ventilation fixtures, or security equipment, and appurtenant lines and equipment, which are outside the boundaries of an Attached Unit shall be performed by the Association. All maintenance, repairs and replacements (except for interior cleaning) of the skylights to an Attached Unit and appurtenant roofing features outside the boundaries of such Attached Unit shall be performed by the Association. The expense of maintaining, repairing and replacing an individual Attached Unit's roof-mounted ventilation fixtures or skylights, or other equipment, shall be charged to the respective Attached Unit that such heating or cooling, ventilation, or security fixtures or skylight or equipment serves solely, as an Individual Expense.

7.2 **Additions, Alterations or Improvements**.

(a) A unit owner may make any improvements or alterations to such owner's unit that do not impair the water tightness, acoustic performance, structural integrity, or fire, life, safety and mechanical systems of the Condominium or lessen the support of any portion of the Condominium, reduce its value, impair any easement or increase the common expenses; provided, however, if such alterations affect the exterior of a unit, they shall be subject to any architectural design guidelines adopted by the board. An Attached Unit owner is expressly prohibited from drilling into or attaching anything to the common elements, including without limitation, signs or satellite dishes, or to windows or window frames and from making any penetration into the building envelope or cement slab foundation without prior written consent from the board of directors. Any alterations, including change in paint color, roofing materials, or cladding exterior materials, that a Freestanding Unit owner wishes to make to the exterior of his or her Freestanding Unit, must first obtain prior written consent from the board. The board of directors may adopt architectural design review guidelines regarding such architectural review. The board shall approve the proposed alteration unless it determines within 30 days that the proposed change will impair the structural integrity, or the fire, life, security, safety or mechanical systems of the Freestanding Unit or the Condominium, or is not in harmony with the

architectural design and appearance of the Condominium as a first-class aviation center. A unit owner may not submit a unit to condominium ownership without the prior approval of the board and, up until the Turnover Meeting, the Declarant.

(b) Each unit owner shall be responsible for providing proper notice through the Oregon Department of Aviation to the Federal Aviation Administration of any proposed construction or alteration to be performed by unit owner, in conformity with Federal Aviation Regulations, Part 77.

(c) After acquiring an adjoining unit or an adjoining part of an adjoining unit, a unit owner may submit a written request to the board of directors for permission to remove or alter any intervening partition or to create apertures therein, even if the partition in whole or in part is a common element. The board shall approve the change unless it determines within 45 days that the proposed change will impair the structural integrity or the fire, life, security, safety or mechanical systems of the Condominium or lessen the support of any portion of the Condominium. The board may require the unit owner, at the owner's own expense, to submit an opinion of a registered architect or registered professional engineer that the proposed change will not impair the structural integrity or mechanical systems of the Condominium or lessen the support of any portion of the Condominium. Removal of partitions or creation of apertures under this paragraph is not an alteration of boundaries.

(d) A unit owner may not change the appearance of the common elements without the prior written permission of the board of directors. A unit owner may not change the appearance of the exterior of the owner's unit, whether Freestanding or Attached, including the installation of any exterior canopy or awning except as authorized by the board of directors in advance, except that the owner of a unit may install or change such unit's entry doors or windows, aircraft and vehicle access doors, provided that such installations and changes meet the Association's written architectural design and color guidelines. Except as set forth in Section 7.5(g) below, no person shall install wiring for electrical installation, surveillance cameras, television antennas or satellite dishes, cell towers, machines or air conditioning units or similar devices or equipment on the exterior of the Condominium (including any Freestanding Unit) or cause them to protrude through the walls or the roof of the Condominium (including any Freestanding Unit) except as authorized by the board in advance.

(e) Any owner performing any additions, alterations or improvements shall be liable for any damages caused by or resulting from such work and neither the Association or its directors, officers or managers nor Declarant or its design professionals, contractors and subcontractors and their consultants, including, without limitation, all of their officers, members, managers, directors, employees, agents and brokers, shall have any liability therefor, and the owner shall indemnify such persons and entities from and against any claims by unit owners or other persons or entities for loss or damage resulting from such work. All additions, alterations or improvements shall be performed in compliance with all applicable laws, codes and ordinances.

(f) The owner of a unit shall have access to building systems and common areas as necessary or convenient for the build-out, use and maintenance of the units, including, without limitation, heating or cooling, or ventilation equipment and shafts, fans and filters, and

the right to run utility lines through the common elements at the owner's expense, with prior written consent of the board of directors, provided such lines do not interfere with the use of such spaces for the purposes for which they were intended.

7.3 **Damage or Destruction by Casualty of Condominium Property**. In the case of damage or destruction that affects a material portion of the Condominium, timely written notice shall be given to the unit owners and their Mortgagees and the following provisions shall apply:

(a) In the event of damage or destruction by casualty of Condominium property, the damage or destruction shall be repaired, reconstructed or rebuilt unless, within 14 days of such damage or destruction, the board of directors or unit owners holding more than 10 percent of the voting rights shall have requested a special meeting of the Association. Such special meeting must be held within 60 days of the date of damage or destruction. At the time of such meeting, unless unit owners holding 90 percent of the voting rights, whether in person, by writing or by proxy, with the approval of Mortgagees as required by the Declaration, vote not to repair, reconstruct or rebuild the damaged property, the damage or destruction shall be repaired, reconstructed or rebuilt. If the damage or destruction is not repaired, reconstructed or rebuilt, then the property shall be removed from condominium ownership in the manner provided in the Oregon Condominium Act.

(b) The Association shall be responsible for repairing, reconstructing or rebuilding all such damage or destruction to the common elements and, to the extent of the Association's insurance coverage, all such damage or destruction to the units. Each unit owner shall be responsible for the cost of such repairing, reconstructing or rebuilding of his or her unit that is not covered by the Association's insurance and to the extent of any deductible under the Association's insurance.

(c) If, due to the act or neglect of a unit owner, or of a member of the owner's family or household pet or of a guest or other occupant or visitor of such unit owner, damage shall be caused to the common elements or to a unit owned by others, or maintenance, repairs or replacements shall be required that would otherwise be a common expense, then such unit owner shall pay for the damage and the maintenance, repairs and replacements as may be determined by the Association, to the extent not fully covered by the Association's insurance.

(d) If any portion of the insurance proceeds paid to the Association is not used to repair, reconstruct or rebuild the damaged or destroyed property, the Association shall distribute the proceeds among the unit owners and their Mortgagees (as their interests may appear) in the same proportion as common expenses are shared, unless the property is removed from unit ownership. If the property is removed from unit ownership, the insurance proceeds, together with the proceeds from the sale of the property, shall be distributed to the unit owners and their Mortgagees (as their interests may appear) in the manner described in the Oregon Condominium Act.

7.4 **Condemnation**. If any portion of the Condominium is made the subject matter of any condemnation or eminent domain proceeding or is otherwise sought to be acquired by a condemning authority, notice of the proceeding or proposed acquisition shall promptly be given to each unit owner and to each Mortgagee. The Association shall represent the unit owners in

any condemnation proceedings or in negotiations, settlements and agreements with the condemning authority for acquisition of any portion of the common elements, and each unit owner appoints the Association to act as his attorney-in-fact for such purposes. All compensation, damages or other proceeds of the taking, other than any award for moving expenses of specific unit owners, shall be payable to the Association and allocated and distributed as provided in this Section 7.4.

(a) **Complete taking**. If the entire Condominium property is taken, or if unit owners holding 90 percent of the voting rights agree that such a substantial portion of the Condominium has been taken as to make the project obsolete, then the property shall be deemed removed from unit ownership. In such event, any proceeds of the condemnation paid to the Association, together with any other proceeds upon sale of the remaining Condominium property, shall be distributed among the unit owners and their Mortgagees, as their interests may appear, in accordance with the provisions of the Oregon Condominium Act.

(b) **Partial taking**. If less than the entire Condominium property is taken and the property is not determined to be obsolete as provided in paragraph (a) above, then as soon as practicable the board of directors shall, reasonably and in good faith, allocate the award among the units in accordance with the reduction in the value of each unit and its interest in the common elements, compared to the total reduction in value of all units and their interest in the common elements. If any unit owner or Mortgagee objects to the allocation determined by the board of directors, the matter shall be submitted to arbitration in accordance with Article 10 below. The cost of such determination shall be paid out of the proceeds of the condemnation. Any portion of the award allocated to a unit owner under this paragraph shall be paid first to all Mortgagees and holders of liens on the unit owner's interest in accordance with the existing priorities, and the balance to the unit owner. If any reconstruction or repair is undertaken as a result of the condemnation, the board may retain and apply such portion of each unit owner's share of the award as is necessary to discharge the owner's liability for any special assessment arising from such reconstruction or repair.

7.5 **Restrictions and Requirements Respecting Use of Condominium Property**. The following restrictions and requirements are in addition to all other restrictions and requirements contained in the Declaration and these Bylaws:

(a) **Yellow Gate Hangar Unit use**. The Yellow Gate Hangar Units shall be used only for the storage and maintenance of aircraft. Ancillary to the storage and maintenance of aircraft, vehicles, equipment, or tools may be stored in the Unit so long as the vehicles and equipment are used by the unit owner or the owner of an aircraft based in the Yellow Gate Hangar unit, and further, so long as the primary use of the Unit is storage and maintenance of aircraft. The only aircraft maintenance work permitted to be performed in a Yellow Gate Hangar Unit shall be done on aircraft based in the unit, and the unit shall not be used for maintenance for aircraft not based in the unit. Except for bookkeeping, record keeping, and other activities closely associated with the storage, maintenance, and operation of private aircraft, no other commercial or industrial use of the Yellow Gate Hangar Units is permitted.

(b) **Commercial Hangar Unit use**. The Commercial Units shall be used only for the sale, storage, assembling, and general maintenance of aircraft, for office uses ancillary to

such activities, and for parking passenger vehicles of the unit owner, and the guests, customers, tenants, and employees of the unit owner. Commercial Hangar Unit owners shall also have the right to store their customers' aircraft in their unit(s). For purposes of this Section 7.5 "unit owner's customers" shall mean those parties for whom the unit owner manages or maintains their aircraft. Additionally, to the extent such use is a necessary part of a Commercial Hangar Unit owner's ongoing day-to-day business activities, Commercial Hangar Units may be used for the temporary overnight lodging of aircraft crews to comply with applicable Federal Aviation Administration regulations.

(c) **Conditional residential use of Commercial Hangar Units and Yellow Gate Hangar Units.** Notwithstanding anything to the contrary herein, a Commercial Hangar Unit or a Yellow Gate Hangar Unit, or a portion thereof, may be used as a caretaker residence to the extent allowed by applicable ordinances, and provided that the unit owner has properly obtained any conditional use permit required under applicable law for such use of the owner's unit, as well as the prior written consent of Declarant, or following turnover, the board of directors. In no case, however, will there be more than a total of five caretaker residences in the Condominium.

(d) **Use of common elements**. The common elements shall be used for the furnishing of services and facilities for which they are reasonably intended, for the enjoyment of the units, for the staging, taxiing, and for ingress and egress of aircraft and passenger vehicles. Other than incidental crossings by pedestrians or vehicles, no taxilane shall be used for anything other than the staging and movement of aircraft, in accordance with applicable FAA regulations. The use, operation, and maintenance of the common elements shall not be obstructed, damaged or unreasonably interfered with by any unit owner. Unit owners shall take such steps to ensure that the performance of all aircraft maintenance work and operation shall not damage the common elements of the Condominium.

(e) **Offensive or unlawful activities**. Only uses permitted under applicable zoning ordinances are permitted in the Condominium. No noxious or offensive activities shall be carried on in any unit nor shall anything be done in or placed upon any unit or common element that interferes with or jeopardizes the enjoyment of other units or the common elements or which is a source of annoyance to occupants. No painting (other than of walls) shall be done in the unit, except in commercial painting booths in compliance with all applicable air quality and OSHA standards. No storage of any flammables is permitted in any unit except in fire department approved containers or in the tank of an aircraft stored in a unit. No open flame welding, grinding, metal polishing or related activities shall be conducted in a unit.

(f) **Animals**. No animals or fowls shall be raised, kept, or permitted within the Condominium or any part thereof, except a reasonable number of domestic pets kept within a unit or a designated dog run area. Pets shall not be left overnight alone in a unit and shall not be permitted to run at large, nor shall pets be kept, bred, or raised for commercial purposes. Any inconvenience, damage or unpleasantness caused by a pet shall be the responsibility of the owner thereof, and the owner shall be responsible for cleanup and removal of wastes of the owner's animal. All pets shall be kept under reasonable control at all times and shall be securely carried or kept on a leash while outside a unit or dog run. Each owner and occupant, contractor, guest, customer, or employee of a unit owner shall be responsible for seeing that his or her pets do not

endanger health, make objectionable noise, or constitute a nuisance or inconvenience to the owners and occupants of other units. The board of directors, after notice and a hearing, may require the permanent removal of any animal that the board determines to be a danger to the health and safety of anyone in the Condominium, or otherwise to be a nuisance within the Condominium. The board may find that an animal is a nuisance if the animal or its owner continues to violate these Bylaws or the rules regulating pets after receipt by the owner of a written demand from the board to comply with these Bylaws or the rules or regulations established by the board.

(g) **Electrical usage**. No electrical device creating an overload of standard circuits may be used without permission from the board of directors. Misuse or abuse of appliances or fixtures within a unit that affects other units or the common elements is prohibited. Any damage resulting from such misuse shall be the responsibility of the owner who caused such damage. Total electrical usage in any unit shall not exceed the capacity of the circuits as labeled on the circuit breaker boxes.

(h) **Exterior lighting or noisemaking devices and antennas**. Except with the consent of the board of directors of the Association, no exterior lighting or noisemaking devices (other than those that are a standard part of a security system) shall be installed or maintained on any unit. Seasonal holiday lighting and decorations are permissible if consistent with any applicable rules and regulations, including any Aviation Laws, and if removed within 30 days after the celebrated holiday. A unit owner may install antennas, satellite receiver, or transmission dishes, and other communication or security devices serving the owner's unit (but only on the portion of the roof of the Condominium covering the owner's unit) without board approval, provided such installation is in compliance with applicable law, including Aviation Law, and does not require any structural alterations, cause any structural damage, or cause roof leaks. The owner installing any such device shall indemnify and hold harmless the Association, Declarant, the architectural and engineering consultants, the original contractor or subcontractor and each other unit owner and unit lessee from any damage, loss, or liability resulting from such installation.

(i) **Parking of vehicles in common element areas**. Except with the consent of the board of directors of the Association, no vehicle in an extreme state of disrepair, no tractor trailer, trailer, truck camper, boat or boat trailer, or other recreational vehicle or truck rated as more than one two tons shall be parked on any portion of the Condominium, except within units or in areas designated for such purpose by the board of directors if the board elects to do so. A vehicle shall be deemed in an "extreme state of disrepair" when the board reasonably determines that its presence offends the occupants of the Condominium due to its appearance or continued inoperability. The Association, by rule, may regulate the length of time vehicles may be parked in driveways, general common element parking spaces, and aircraft taxilanes. The Condominium includes general common element parking spaces that are available for use by a handicapped person and to the extent required by law, the board may designate additional spaces for such use. The parking spaces designated as general common elements are intended for use of automobiles and motorcycles of unit owners, employees, tenants, flight crews, customers, and guests. The board may designate certain parking areas for temporary overnight parking. The board may make such rules necessary to govern the use of any general common element parking areas and driveways by which all unit owners and other users shall be bound, including but not

limited to speed limits and the maximum time a vehicle may be parked in the common element parking spaces. No unit owner may use any parking spaces in the Condominium for vehicle or equipment storage.

(j) **Signs**. To the extent permitted by applicable laws and codes, and subject to a unit owner obtaining the necessary permits and the board of director's prior written approval, a Freestanding Unit owner shall have the right to place signs bearing unit owner's name or logo as well as those names and logos of aircraft it is licensed to sell or maintain on the common elements exterior walls or roof of the owner's unit; likewise Freestanding Unit owners shall have the right to place signs on the exterior of the owner's unit. No sign or billboard of any kind shall be displayed elsewhere on the common elements, except project signs or directories installed by the Association. All electricity to illuminate signs installed on the exterior of the owner's unit shall be the responsibility of the unit owner. Ownership of and responsibility to maintain signs installed on any common element will remain with the unit owner who installed them. Declarant, however, may erect and maintain such signs and other advertising devices or structure as it may deem necessary or proper in connection with the conduct of its operations for the development, improvement and sale of the Condominium units. The board shall not withhold consent for an exterior sign for a unit, provided such sign complies with all applicable governmental regulations and any rules or regulations adopted by the board that governs signs.

(k) **Trash**. No part of any unit or any part of the common elements shall be used or maintained as a dumping ground for rubbish, trash, garbage, recycling materials, machine or aircraft parts, or other waste. No garbage, trash, recycling materials or other waste shall be kept or maintained on any part of the property, except in sanitary containers in the designated areas.

(l) **Insurance**. Nothing shall be done or kept in any unit or in the common elements that will increase the cost of insurance on the common elements. No owner shall permit anything to be done or kept in his or her unit or in the common elements that will result in cancellation of insurance on any unit or any part of the common elements. If any use shall lead to an increase in fire or other insurance premiums otherwise payable on the insurance obtained by the board of directors pursuant to Article 8 of these Bylaws, or insurance procured by an individual unit owner, the party causing such increase shall be liable for payment of the same to the board of directors or individual unit owner, as the case may be. The party so charged with increasing the premium cost shall have the right to contest the validity of such increase. A levy made against such unit owner for such increase in premiums may be enforced by the board by adding the levy to the common charges allocable to such unit owner.

(m) **Aircraft and vehicle access doors.** All vehicle and aircraft access doors shall remain closed after regular business hours except to permit the entrance and exit of vehicles or aircraft.

(n) **Smoking**. Smoking is not allowed anywhere within the units or common elements of the Condominium.

(o) **Hazardous substances.** No unit owner shall generate, transport, transfer or store any hazardous substances in, on, above, to or from the Condominium or adjacent public

air field, including but not limited to, state and federally defined hazardous substances. Unit owners are permitted, in the ordinary course of their business, to use and store the following in the unit: flammables and lubricants, all of which must be in compliance with all applicable law and regulations, in permissible quantities, containers, and given adequate ventilation. No diesel, gasoline, propane, natural gas, or aircraft fuel shall be stored in a unit in containers larger than 5 gallons or other amount designated by the board, except in the tank of an aircraft that is stored in the unit or the tank of equipment handling machines operated in the unit. In the event of a leak, spill, or release of a hazardous substance in, on, or above a unit or any common element of the Condominium, the unit owner will immediately notify the Association and the proper authorities and will undertake all emergency response necessary to contain, clean up, and remove the hazardous substance and within a reasonable time investigate, remediate, or otherwise take action necessary or appropriate to insure that any contamination by the hazardous substance is eliminated. The unit owner shall provide certification acceptable to the board of directors that all such contamination has been eliminated.

(p) **Prohibited uses**. By way of clarification, but in no way limiting the permissible uses of the units set forth in this Section 7.5, the following activities in and uses of units in the Condominium are not permitted:

(1) Storing fuels in larger than 5 gallon containers; dispensing or selling fuels, or fueling aircraft, vehicles, or any other machine; and

(2) Mortuary or crematorium, machine shop or manufacturing except for aircraft; automotive or bicycle repair businesses; adult book and/or video store; movie production; amusement center; betting parlor; bingo parlor; bowling alley, carnival; check cashing services; electronic, mechanical games or amusement arcade; facility primarily devoted to training or education; flea market; tattoo or body piercing parlor, fortune telling, palm reading or other business relating to the occult; gambling establishment; gym, health or aerobic club, spa or studio; illegal, offensive, noisy or dangerous trade; massage parlor; novelty shop or store; nude or partially nude entertainment; pet grooming or boarding; pornographic shop or store or production; sale or storage of firearms and/or ammunition; thrift shop; sale, growing, or storage of drugs or drug paraphernalia; self-service laundry; skating rink, store or shop engaged primarily in the sale of used products; veterinarian's services.

(3) No use of a building in the Condominium, or other structure or facility, that results in violation of the airport imaginary surfaces regulations, as defined in the Federal Aviation Regulations, Part 77 (or a regulation that replaces Part 77).

Notwithstanding anything to the contrary, if the portion of the Additional Property utilized as a fixed base operator as of the date the Declaration is recorded, including commercial fueling services for aircraft, is ever annexed as a unit to the Condominium, neither sub-paragraph (p)(1) above nor the 5-gallon sized maximum sized container in sub-paragraph (o) shall apply to such unit. If the existing fixed base operator ceases to offer commercial fuel services for aircraft, the Declarant, and following turnover, the board of directors, shall have the authority to authorize one alternative fixed base operator in the Project to provide fuel to the unit owners and aircraft based at the Condominium with fueling services; the same may approve such use in no more than one unit at a time in the Condominium.

(q) **Association rules and regulations**. In addition, the full board of directors from time to time may adopt, modify, or revoke such rules and regulations governing the conduct of persons and the operation and use of the units and common elements as it may deem necessary or appropriate in order to insure the peaceful and orderly use and enjoyment of the Condominium property, including, without limitation, establishment of reasonable administrative fees. Any rules or regulations concerning only the Commercial Units shall be adopted, modified or revoked only by the Commercial Directors; any rules or regulations concerning only the Yellow Gate Hangar Units shall be adopted, modified or revoked only by the Yellow Gate Hangar Directors. Rules or regulations concerning the Commercial Units and the Yellow Gate Hangar Units must be approved by the full board of Directors. Any action by the board to adopt, modify or revoke a rule or regulation may be overruled by a vote of not less than 75 percent of the voting rights eligible to elect the directors who adopted the rule or regulation to be overruled, whether the Commercial or Yellow Gate Hangar Directors or the full board pursuant to this Section, which voting rights are present, in person or by proxy, at any meeting, the notice of which shall have stated that such adoption, modification or revocation of rules and regulations will be under consideration. A copy of the rules and regulations, upon adoption, and a copy of each amendment, modification or revocation thereof, shall be delivered by the secretary promptly to each unit owner and shall be binding on all unit owners and occupants of all units from the date of delivery.

7.6 **Movement and Staging of Aircraft**. Unit owners, their tenants, guests, customers, employees and contractors, shall take care to move and stage aircraft in common element areas so as not to block or impede the movement of other aircraft over the common elements and shall comply with all Aviation Laws and with the , and shall not engage in any activity that would negatively affect the Association's or any unit owner's rights of ingress and egress to the public use area of the Aurora State Airport. The board of directors may adopt rules and regulations regarding the use of common element areas for staging and moving aircraft.

7.7 **Security Services**. The Association may provide patrolling of the common elements, and monitoring of the Condominium common element areas and repair of the common element security, surveillance, and alarm systems, and may enter an agreement with a security or alarm company for such purposes, the cost of which will be a common expense. The Association shall provide each unit owner with a certain number of "proximity" security cards assigned to the owner's unit for access to the Condominium, which shall belong to the Association and shall only be for the use of the unit owner, and the unit owner's tenants, guests, employees, contractors, agents and family members ("**Owner Parties**"). The name of each card holder shall be filed with the Association by each unit owner, which list must be kept current. The Association reserves the right to fine any Owner Party or to revoke any such security cards, in the event of card misuse, unauthorized copying or distribution to any party other than an Owner Party permitted herein without notice to the Association, in accordance with rules and regulations that the Association may adopt. **Neither the Association, Declarant nor any managing agent shall be considered insurers or guarantors of security or safety within the Condominium, nor shall either be held liable for any loss or damage by reason of failure to provide adequate security or ineffectiveness of security or safety measures undertaken. No representation or warranty is made that any system or measure, including any mechanism or system for limiting access to the Condominium, cannot be compromised or circumvented, nor that any such system or measure undertaken will in all cases prevent**

loss or provide the detection or protection for which it is designed or intended. Each unit owner and Owner Party acknowledges and agrees that the Association, the board of directors and any managing agent are not insurers and that each Person using the Condominium assumes all risks for personal injury and loss or damage to property resulting from acts of third parties.

7.8 **Leasing and Rental of Units**. The following shall apply to all leases, subleases, and rentals of units.

(a) Any owner who wishes to lease or rent his or her unit must meet each of the following requirements, and the lease or rental agreement will be subject to these requirements whether or not they are included within the lease or rental agreement:

(1) all leases and rentals must be in writing;

(2) all such leases and rentals shall be subject in all respects to provisions of the Declaration, these Bylaws, and all rules and regulations adopted by the board;

(3) all owners who lease or rent their units shall promptly notify the Association in writing of the names of all tenants and members of tenants' family and employees occupying such units and shall provide the Association with a complete copy of the lease or rental agreement.

(b) Any failure of a tenant to comply with the Declaration, Bylaws, and Association rules and regulations, shall be a default under the lease or rental agreement, regardless of whether the lease or rental agreement so provides. In the event of any such default, the owner immediately shall take all actions to cure the default including, if necessary, eviction of the tenant.

(c) If any tenant is in violation of the provisions of the Declaration, Bylaws, or rules and regulations of the Association, the Association may bring an action in its own name and/or in the name of the owner to have the tenant evicted or to recover damages, or both. If the court finds that the tenant is violating, or has violated any of the provisions of the Declaration, these Bylaws or the rules and regulations of the Association, the court may find the tenant guilty of unlawful detainer notwithstanding the fact that the owner is not the plaintiff in the action or that the tenant is not otherwise in violation of tenant's lease. The remedy provided by this subsection is not exclusive and is in addition to any other remedy or remedies that the Association may have. If permitted by present or future law, the Association may recover all its costs, including court costs and reasonable attorneys' fees incurred in prosecuting the unlawful detainer action.

(d) The Association shall give the tenant and the owner notice in writing of the nature of the violation, and 20 days from the mailing of the notice in which to cure the violation before the Association may file for eviction.

(e) Each owner shall provide a copy of the Declaration, these Bylaws and all rules and regulations of the Association to each tenant of his or her unit. By becoming a tenant, each tenant agrees to be bound by the Declaration, these Bylaws and the rules and regulations of

the Association, and recognizes and accepts the right and power of the Association to evict a tenant for any violation by the tenant of the Declaration, these Bylaws, and rules and regulations of the Association.

7.9 **Abatement and Enjoining of Violations**. The violation of any provision of the Declaration or these Bylaws, of any rule or regulation adopted pursuant to these Bylaws, or of any decision of the Association made pursuant to such documents, shall give the board of directors, acting on behalf of the Association, the right, in addition to any other rights set forth in these Bylaws, to do any or all of the following after giving written notice and an opportunity to be heard:

(a) to summarily abate and remove, at the expense of the defaulting unit owner, any structure, thing, or condition that may exist contrary to the intent and meaning of such provisions, and the board of directors shall not thereby be deemed guilty of any manner of trespass; provided, however, that judicial proceedings shall be instituted before any items of construction may be altered or demolished; or

(b) to enjoin, abate, or remedy such thing or condition by appropriate legal proceedings; or

(c) to levy reasonable fines based on a resolution adopted by the board of directors that is delivered to each unit, mailed to the mailing address of each unit or mailed to the mailing address designated by the owner of each unit in writing; or

(d) to terminate the right to receive utility services paid for out of assessments or the right of access to and use of service facilities of the Condominium until the correction of the violation has occurred.

The offending unit owner shall be liable to the Association for a reasonable administrative fee as established by the board of directors and all costs and attorneys' fees incurred by the Association, whether or not legal proceedings are instituted and including attorneys' fees at trial, in arbitration or on appeal or petition for review, together with any expense incurred by the Association in remedying the default, damage incurred by the Association or unit owners, or fines so levied. Such sums shall be assessed against the offending unit as an assessment and enforced as provided in Article 5. In addition, any aggrieved unit owner may bring an action against such other unit owner or the Association to recover damages or to enjoin, abate, or remedy such thing or condition by appropriate legal proceedings.

Article 8

INSURANCE

8.1 **Types of Insurance**. For the benefit of the Association and the unit owners, the board of directors shall obtain and maintain at all times, and shall pay for out of the common expense funds, the following insurance:

(a) **Property damage insurance**.

(1) The Association shall maintain a policy or policies of insurance covering loss or damage from fire, with standard extended coverage and "all risk" endorsements, and such other coverages as the Association may deem desirable.

(2) The amount of the coverage shall be for not less than 100 percent of the current replacement cost of the Attached Units and common elements (exclusive of land, foundation, excavation and other items normally excluded from coverage), subject to a reasonable maximum deductible.

(3) The policy or policies shall include all fixtures and building service equipment to the extent that they are part of the common elements and all personal property and supplies belonging to the Association, together with all fixtures, improvements and alterations composing a part of each Attached Unit.

(4) Such policy or policies shall name the Association as insured, and shall provide for loss payable in favor of the Association, as a trustee for each unit owner and each such unit owner's Mortgagee, as their interests may appear. The policies shall contain the standard mortgage clause, or equivalent endorsement (without contribution) that is commonly accepted by institutional mortgage investors in Oregon.

(b) **Liability insurance**.

(1) The Association shall maintain comprehensive general liability insurance coverage insuring Declarant, the Association, the board of directors, and the unit owners and the manager, against liability to the public or to the owners of units and of common elements, and their invitees or tenants, incident to the operation, maintenance, ownership or use of the property, including legal liability arising out of lawsuits related to employment contracts of the Association. Such policy or policies may exclude coverage of a unit owner (other than as a member of the Association or board) for liability arising out of acts or omission of such unit owner and liability incident to the ownership and/or use of the part of the property as to which such unit owner has the exclusive use or occupancy.

(2) Limits of liability under such insurance shall not be less than $1,000,000 on a combined single limit basis.

(3) Such policy or policies shall be issued on a comprehensive liability basis and shall provide a cross-liability endorsement wherein the rights of named insured under the policy or policies shall not be prejudiced as respects his, her or their action against another named insured.

(c) **Workers' compensation insurance**. The Association shall maintain workers' compensation insurance to the extent necessary to comply with any applicable laws.

(d) **Fidelity insurance**.

(1) The Association shall maintain fidelity insurance for all officers, directors, trustees and employees of the Association and all other persons handling or responsible for funds of or administered by the Association. If the Association has retained a manager, such manager shall maintain fidelity insurance for its officers, employees and agents handling or responsible for funds of, or administered on behalf of, the Association.

(2) The total amount of fidelity insurance coverage required shall be based on the best business judgment of the board of directors.

(3) Such fidelity insurance shall name the Association as obligee and shall contain waivers by the issuers of the insurance of all defenses based on the exclusion of persons serving without compensation from the definition of "employees" or similar terms or expressions. The insurance shall provide that it may not be canceled or substantially modified (including cancellation for nonpayment of premium) without at least 10 days' prior written notice to the Association.

(e) **Directors' and officers' liability insurance**. The Association shall maintain a policy of directors' and officers' liability insurance with coverage in the amount of not less than $1,000,000 subject to a reasonable deductible, which deductible shall be the responsibility of the Association. Such insurance shall cover both interim and regular directors and shall include coverage for claims brought by the Association, unit owners and/or third parties, including, without limitation, claims arising out of construction defects or failure to maintain adequate reserves. Directors and officers will be accepting such positions in reliance upon such insurance protection being maintained by the Association. Therefore, in the event the Association fails to carry such insurance or amends these Bylaws to delete or reduce these insurance requirements, the Association and unit owners shall be deemed to have released such claims and deemed to have covenanted not to sue or prosecute any claims against its current or former directors or officers that would have been insured under such a policy.

(f) **Insurance by unit owners.** The Association has no responsibility to procure or assist in procuring property loss insurance for any owner or tenant for (i) damage to a unit or limited common elements not covered by the Association's policy (because of the deductible amount or because the claim for loss or damage is one not covered by fire and property loss insurance policies required by these Bylaws or held by the Association); or (ii) for any damage or loss to the owner's or tenant's personal property, including any aircraft. Owners must purchase insurance policies insuring their units and appurtenant limited common elements, (Freestanding Unit owners shall carry property insurance policies for their units comparable to the insurance described in Section 8.1(a)(1)), which policies shall also cover the deductible amount under the Association's policies, and the unit owner's own personal property, including aircraft. Additionally each unit owner shall maintain a hangar keeper's policy if aircraft not belonging to the unit owner is stored, repaired, or maintained in such owner's unit, for any loss or damage. Proof of such insurance coverage must be provided to the Association by the unit owner at least annually, or more frequently as the Association may require. Tenants must be responsible under their leases for insuring their own personal property, including aircraft, for any loss or damage. The Association shall notify all owners of the amount of the deductible under

the Association policies. To the extent reasonably practicable, the Association shall give at least 30 days' notice to the owners of any increase in the deductible proposed in renewal or replacement insurance policies. Owners and tenants of all units must procure and maintain comprehensive liability policies having combined limits in amounts reasonably set by the board of directors no more often than every three years. Such insurance must provide coverage for, without limitation, the negligent acts of the owner and tenant and their guests or other occupants of the unit for damage to the general and limited common elements and other units and the personal property of others located therein.

8.2 **Other Insurance Requirements**. Insurance obtained by the Association shall be governed by the following requirements:

(a) All policies shall be written with the State of Oregon or a company that is licensed to do business in the State of Oregon and that falls into a "B" or better general policyholder's rating or a "6" or better financial performance index rating in Best's Insurance Reports, an "A" or better general policyholder's rating and a financial size category of "VIII" or better in Best's Insurance Reports – International Edition, an "A" or better rating in Demotech's Hazard Insurance Financial Stability Ratings, a "BBBq" qualified solvency ratio or a "BBB" or better claims—paying ability rating in Standard and Poor's Insurer Solvency Review, or a "BBB" or better claims – paying ability in Standard and Poor's International Confidential Rating Service.

(b) Notwithstanding the provisions of Section 8.1 above, there may be named as an insured, on behalf of the Association, the Association's authorized representative, including any trustee with whom the Association may enter into any Insurance Trust Agreement, or any successor to such trustee. Such insurance trustee shall have exclusive authority to negotiate losses under any property or liability insurance policy. Each unit owner appoints the Association, or any insurance trustee or substitute trustee designated by the Association, as attorney-in-fact for the purpose of purchasing and maintaining such insurance including: the collection and appropriate disposition of the proceeds thereof, the negotiation of losses and execution of releases of liability, the execution of all documents, and the performance of all other acts necessary to accomplish such purchase. The Association or insurance trustee shall receive, hold or otherwise properly dispose of any proceeds of insurance in trust for unit owners and their first Mortgage holders, as their interests may appear.

(c) All property insurance policies shall contain a "Special Condominium Endorsement" or its equivalent providing for the following: recognition of any Insurance Trust Agreement, a waiver of the right of subrogation against unit owners individually, a provision that the insurance is not prejudiced by any act or neglect of individual unit owners that is not in the control of such owners collectively, and a provision that the policy is primary in the event that the unit owner has other insurance covering the same loss.

(d) For purposes of this article, insurance policies are unacceptable if (i) under the terms of the insurance carrier's charter, bylaws or policy, contributions or assessments may be made against the Association or unit owners, or (ii) by the terms of the carrier's charter, bylaws or policy, loss payments are contingent upon action by the carrier's board of directors,

policy holders or members, or (iii) policy includes any limiting clauses (other than insurance conditions) that could prevent the owners from collecting insurance proceeds.

(e) All policies required by this article shall provide that they may not be canceled or substantially modified without at least 10 days' prior written notice to the Association and to each holder of a first Mortgage that is listed as a scheduled holder of a first Mortgage in the insurance policy. Evidence of insurance shall be issued to each unit owner and Mortgagee upon request.

(f) All policies required by this article shall contain a waiver of subrogation as to claims against Declarant and its members and managers, and their respective employees, representatives, offices, directors, managers and members.

(g) Any unit owner who obtains individual insurance policies covering any portion of the property other than such owner's personal property and fixtures shall file a copy of such individual policy or policies with the Association within 30 days after the purchase of such insurance.

8.3 **Optional Provisions**. The board of directors shall make every effort to secure insurance policies that provide for the following:

(a) To the extent appropriate and available at reasonable cost, the Association shall maintain additional coverages against such other risks as are customarily covered with respect to projects similar in construction, location and use, including but not limited to, host liquor liability, contractual and all-written contract insurance, employer's liability insurance, comprehensive automobile liability insurance, and an endorsement patterned after "use and occupancy" insurance providing relief from monthly assessments while a unit is uninhabitable due to a covered loss.

(b) If reasonably available, the insurance policies shall include Inflation Guard Endorsement, and Construction Code Endorsements (such as a Demolition Cost Endorsement, a Contingent Liability from Operation of Building Laws Endorsement, and an Increased Cost of Construction Endorsement).

(c) Flood Insurance, if the Condominium is in a Special Flood Hazard Area.

(d) If reasonably available, waiver of subrogation by the insurer as to any claims against the board of directors, any unit owner or any guest of a unit owner.

Article 9

AMENDMENTS TO BYLAWS

9.1 **How Proposed**. Amendments to the Bylaws shall be proposed by either a majority of the board of directors or by unit owners holding 30 percent of the voting rights. The proposed amendment must be reduced to writing and shall be included in the notice of any meeting at which action is to be taken thereon or attached to any request for consent to the amendment.

9.2 **Adoption**. A resolution adopting a proposed amendment may be proposed by either the board of directors or by the unit owners and may be approved by the unit owners at a meeting called for this purpose or by ballot vote. Unit owners not present at the meeting considering such amendment may express their approval in writing or by proxy. Any resolution must be approved by unit owners holding a majority of the voting rights and by Mortgagees to the extent required by the Declaration, except that (a) any provision of these Bylaws that is also contained in the Declaration must be approved by the same voting requirement for amendment of such provision of the Declaration, and (b) any amendment relating to age restrictions, pet restrictions, limitations on the number of persons who may occupy units, or limitations on the rental or leasing of units must be approved by unit owners holding 75 percent of the voting rights. Declarant's consent shall also be required for a period of 10 years from the date of closing of the sale of the last unit by Declarant to a person other than a successor declarant or Declarant Member. Any amendment to these Bylaws adversely and materially affecting the Commercial Units shall require the written consent of a majority of the owners of the Commercial Units; any amendment to these Bylaws adversely and materially affecting the Yellow Gate Hangar Units shall require the written consent of a majority of the owners of the Yellow Gate Hangar Units.

9.3 **Regulatory Amendments**. Notwithstanding the provisions of Section 9.2 above, until the turnover meeting as described in Section 2.2 has occurred, Declarant shall have the right to amend these Bylaws in order to comply with the requirements of the Rural Development or the Farm Service Agency of the United States Department of Agriculture; the Federal National Mortgage Association; the Government National Mortgage Association; the Federal Home Mortgage Loan Corporation; any department, bureau, board, commission or agency of the United States or the State of Oregon; or any corporation wholly owned, directly or indirectly by the United States or the State of Oregon that insures, guarantees or provides financing for a condominium or units in a condominium.

9.4 **Execution and Recording**. An amendment shall not be effective until certified by the chairperson and secretary of the Association as being adopted in accordance with these Bylaws and the provisions of the Oregon Condominium Act and recorded as required by law. Any amendment adopted within five years after the recording of the initial Bylaws shall be approved by the Oregon Real Estate Commissioner to the extent required by the Oregon Condominium Act.

Article 10

DISPUTE RESOLUTION

10.1 **Claims Other Than for Defective or Negligent Construction or Condition**. The following provisions of this Section 10.1 shall apply to any claim, controversy or dispute by or among Declarant (including members, officers, directors, shareholders and affiliates of Declarant), the Association, the manager or one or more unit owners, or any of them, arising out of or related to the Declaration, these Bylaws or the Condominium, other than claims relating to defective or negligent construction or condition as provided in Section 10.2 below:

(a) **Mediation**.

(1) Except as otherwise provided in this Section 10.1(a), before initiating litigation, arbitration or an administrative proceeding in which the Association and an owner have an adversarial relationship, the party that intends to initiate litigation, arbitration or an administrative proceeding shall offer to use any dispute resolution program available within Marion County, Oregon, that is in substantial compliance with the standards and guidelines adopted under ORS 36.175. The written offer must be hand-delivered or mailed by certified mail, return receipt requested, to the address, contained in the records of the Association, for the other party.

(2) If the party receiving the offer does not accept the offer within 10 days after receipt by written notice hand-delivered or mailed by certified mail, return receipt requested, to the address, contained in the records of the Association, for the other party, the initiating party may commence the litigation, arbitration or the administrative proceeding. The notice of acceptance of the offer to participate in the program must contain the name, address and telephone number of the body administering the dispute resolution program.

(3) If a qualified dispute resolution program exists within Marion County, Oregon, and an offer to use the program is not made as required under paragraph (1) of this Section 10.1(a), litigation, arbitration or an administrative proceeding may be stayed for 30 days upon a motion of the noninitiating party. If the litigation, arbitration or administrative action is stayed under this paragraph, both parties shall participate in the dispute resolution process.

(4) Unless a stay has been granted under paragraph (3) of this Section 10.1(a), if the dispute resolution process is not completed within 30 days after receipt of the initial offer, the initiating party may commence litigation, arbitration or an administrative proceeding without regard to whether the dispute resolution is completed.

(5) Once made, the decision of the court, arbitrator or administrative body arising from litigation, arbitration or an administrative proceeding may not be set aside on the grounds that an offer to use a dispute resolution program was not made.

(6) The requirements of this Section 10.1(a) do not apply to circumstances in which irreparable harm to a party will occur due to delay or to litigation, arbitration or an administrative proceeding initiated to collect assessments, other than assessments attributable to fines.

(b) **Arbitration**. Any such claim, controversy or dispute shall be first subject to mediation as provided in Section 10.1(a) above or otherwise, and, if not timely settled by mediation, resolved by arbitration in accordance with this Section 10.3 below. The decision and award of the arbitrator shall be final, binding and nonappealable.

(c) **Excluded matters**. Notwithstanding the foregoing, the following matters shall not be subject to mediation or arbitration under this Section 10.1 (but shall be subject to the applicable provisions of Section 10.1(d) below): (i) actions relating to the collection of fees, assessments, fines and other charges imposed or levied by the Association (other than disputes as

to the validity or amount of such fees, assessments, fines or charges, which disputes shall be subject to mediation/arbitration as provided above), and (ii) actions to enforce any order, decision or award rendered by arbitration pursuant to Section 10.3. The filing of a lis pendens or the application to any court for the issuance of any provisional process or similar remedy described in the Oregon or Federal Rules of Civil Procedure shall not constitute a waiver of the right or duty to utilize the procedures specified in this Section 10.1.

(d) **Costs and attorneys' fees**. The fees of any mediator and the costs of mediation shall be divided and paid equally by the parties. Each party shall pay its own attorneys' fees and costs in connection with any mediation. The fees of any arbitrator and the costs of arbitration shall be paid by the nonprevailing party or parties; if none, such fees and costs shall be divided and paid equally by the parties. In any suit or action brought by the Association to foreclose its lien or to collect delinquent assessments or in any suit or action brought by Declarant, the Association or any owner or class of owners to enforce compliance with the terms and provisions of the Oregon Condominium Act, the Declaration or these Bylaws, including all amendments and supplements thereto or any rules or regulations adopted by the Association, the prevailing party shall be entitled to recover reasonable attorney fees and costs and disbursements therein and in any appeal therefrom. The determination of who is the prevailing party and the amount of reasonable attorneys' fees to be paid to the prevailing party shall be decided by the arbitrator (with respect to attorneys' fees incurred prior to and during the arbitration proceeding) and by the court or courts, including any appellate or review court, in which such matter is tried, heard or decided, including a court that hears a request to compel or enjoin arbitration or that hears exceptions made to an arbitration award submitted to it for confirmation as a judgment (with respect to attorneys' fees incurred in such proceedings).

10.2 **Claims for Negligent or Defective Construction or Condition**. The following alternative dispute resolution procedures shall apply to any claim by the Association or any unit owner against Declarant, an Annexation Owner, or their members or managers, or any contractor, subcontractor, supplier, consultant or design professional of every tier performing any work or services in connection with the Condominium, and their agents, brokers, successors, employees, representatives, officers, directors, managers and members, and any of their insurers and reinsurers, related to the design, construction or condition of the Condominium, including, but not limited to, claims for defective or negligent construction or design or failure to disclose a defective condition.

(a) **Initial dispute resolution procedures**. In the event of a claim for a construction defect governed by ORS 701.560 to 701.595, the parties shall first comply with the provisions contained therein. In the event the claim is not for a construction defect governed by such provisions, but relates to a claimed defect in the condition of the project, the parties shall follow the same procedures as set forth in such provisions, except that the notice of defect shall include a statement of the basis on which the recipient is claimed to be liable for the defect. Compliance with the procedures contained in this Section 10.2(a) shall be a condition precedent to mediation, arbitration or litigation of any such claims.

(b) **Mediation**. If the initial dispute resolution proceedings under Section 10.2(a) do not resolve the claims, the parties shall then engage in mediation to resolve the claims. The fees of any mediator and the costs of mediation shall be divided and paid equally by the

parties. Each party shall pay its own attorneys' fees and costs in connection with any mediation. Completion of the mediation process under this section shall be a condition precedent to the filing of any arbitration or litigation proceedings or any claims relating to the matter with the Oregon Construction Contractors Board, and the Association and unit owners waive any right to file any such claims if the Association and unit owners have not fully complied with this Section 10.2(b). The mediation shall be conducted in accordance with the following procedures:

(1) Within 60 days after completion of the proceedings under Section 10.2(a) and delivery of a demand for mediation by one of the parties to the other parties, the parties shall agree on a neutral mediator. If the parties are unable to agree on a mediator within that period, upon application of any party, the presiding judge of the Circuit Court of Marion County, Oregon, shall designate the mediator.

(2) Within 60 days after delivery of the demand for mediation, the parties shall exchange with each other all inspection and consultant's reports in their possession pertaining to the claims.

(3) The parties shall have 90 days after exchanging reports in which to perform additional inspections. Any additional reports resulting from such inspections shall be furnished to the other parties prior to mediation.

(4) The mediation shall be conducted after completing parts (1) through (3) above, but within 180 days following delivery of the demand for mediation. The mediator may elect to adjourn the mediation to additional sessions if the mediator determines that further sessions would be beneficial in resolving the disputes.

(5) Each party shall send to the mediation a representative with authority to settle the dispute and will attempt in good faith to resolve all disputes in the mediation.

(6) Any settlement agreed on in mediation shall be documented and executed within 60 days following completion of the mediation.

(c) **Arbitration**. All claims that have not been resolved by mediation shall be resolved by arbitration in accordance with Section 10.3 below. The decision and award of the arbitrator shall be final, binding and nonappealable.

(d) **Third parties**. Upon demand by any party, claims between or among the parties and third parties shall be submitted in a single, consolidated arbitration. Notwithstanding the provisions of Section 10.2(c) above, if any claim involves a claim by either party against a third party who is not required to and does not voluntarily agree to submit such claim to arbitration, then either party may elect to have the claim and the third party claim determined by a court of law in a consolidated proceeding, rather than by arbitration. In such case, the parties waive trial by jury and agree that the matter shall be determined by a judge sitting without a jury.

(e) **Attorneys' fees**. Except to the extent otherwise provided by law, in the event of any claim determined by arbitration or by a court of law under Sections 10.2(c) or 10.2(d) above, each party shall bear its own costs, including, without limitation, filing fees,

attorney's fees, investigation expenses, consultant's fees and expert's fees. The other costs of arbitration and other court costs shall be divided and paid equally by the parties. To the extent permitted by law, statutory attorney's fees under the Unlawful Trade Practices Act or any other applicable statute are hereby waived.

(f) **Confidentiality**. The parties shall keep all discussions of disputes, settlements and arbitration awards and decisions confidential and shall not disclose any such information, whether directly or indirectly, to any third parties other than their attorneys and consultants, unless compelled to do so by an order of a court of competent jurisdiction. In the event of a breach of this confidentiality obligation, the other party shall be entitled to seek and obtain any and all equitable remedies, including injunctive relief and specific performance, and the breaching party waives any claim or defense that the other party has an adequate remedy at law for any such breach, and such party shall not be required to post any bond or other security in connection with any such equitable relief.

(g) **Time periods within which claims must be asserted**. Any claims under this Section 10.2, including, without limitation allegations of property damage or personal injury claims arising out of fungus, spores, or mold, any water intrusion or dampness, or otherwise, regardless of the legal theory or basis of alleged causation, including but not limited to, negligence, professional errors or omissions, strict liability or breach of contract, must be commenced under Section 10.2(a) above within 90 days after the date the Association or the unit owner knew or reasonably should have known of facts sufficient to put them on notice of the claim, **or if earlier**, with respect to the unit and related limited common elements, by no later than the first anniversary of the closing date of the sale of the unit to the first purchaser or, with respect to the general common elements, within 90 days after the date of the turnover meeting as described in Section 2.2 of these Bylaws. Any arbitration or litigation based upon such claims must be instituted within 90 days after completion of the mediation proceedings under Section 10.2(b), or if shorter, the applicable statute of limitations. Any and all such claims not brought within these time periods will be deemed time barred, regardless of when the Association or unit owners actually discovered the alleged basis for the claim.

10.3 **Arbitration**. Any arbitration under these Bylaws shall be conducted in Clackamas or Marion County, or such other location as may be agreed upon by the parties, pursuant to the arbitration statutes of the State of Oregon and any arbitration award may be enforced by any court with jurisdiction. Filing for arbitration shall be treated the same as filing in court for purposes of meeting any applicable statute of limitations or for purposes of filing a notice of pending action ("lis pendens").

(a) **Selection of arbitrator**. The arbitration shall be conducted by a single arbitrator selected by mutual agreement of the parties. The arbitrator selected shall be neutral and unbiased, except to the extent that the arbitrator's prior relationship with any party is fully disclosed and consented to by the other party or parties. If the parties are unable to agree on the arbitrator within 30 days after a party's demand for arbitration, upon application of any party, the presiding judge of the Circuit Court of Marion County, Oregon shall designate the arbitrator.

(b) **Consolidated arbitration**. Upon demand by any party, claims between or among the parties and third parties shall be submitted in a single, consolidated arbitration.

Notwithstanding the provisions of Section 10.2(c), if any claim, controversy or dispute involves a claim by either party against a third party who is not required to and does not voluntarily agree to submit such claim to arbitration, then either party may elect to have the matter determined by a court of law in a consolidated proceeding, rather than by arbitration. In such case, the parties hereby waive trial by jury and agree that the matter shall be determined by a judge sitting without a jury.

(c) **Discovery**. The parties to the arbitration shall be entitled to the same discovery that would be available to them in an action in Marion County Circuit Court. The arbitrator shall have all of the authority of the court incidental to such discovery, including without limitation authority to issue orders to produce documents or other materials, to issue orders to appear and submit to deposition, and to impose appropriate sanctions, including, without limitation, award against a party for failure to comply with any order.

(d) **Evidence**. The parties to the arbitration may offer such evidence as they desire and shall produce such additional evidence as the arbitrator deems necessary for an understanding and determination of the dispute. The arbitrator shall determine the admissibility of the evidence offered. All evidence shall be taken in the presence of the arbitrator and all of the parties, unless any of the parties is absent, in default or has waived its right to be present.

10.4 **Survival**. The mediation and arbitration agreements set forth in this Article 10 shall survive the transfer by any party of its interest or involvement in the Condominium and any unit therein and the termination of the Declaration or these Bylaws.

Article 11

MISCELLANEOUS

11.1 **Notices**. All notices to the Association or to the board of directors shall be sent care of the manager, or if there is no manager, to the principal office of the Association or to such other address as the board of directors may designate from time to time. All notices to any unit owner shall be sent to such address as may have been designated by such owner from time to time, in writing, to the board, or, if no address has been designated, then to the owner's unit. In the discretion of the board, any notice, information or other written material required to be given to a unit owner or director under the Declaration or these Bylaws or pursuant to the Oregon Condominium Act, may be given by electronic mail, facsimile or other form of electronic communication acceptable to the board, except for the following notices: failure to pay an assessment; foreclosure of an association lien under ORS 100.405; an action the Association may take against a unit owner; or an offer to use the dispute resolution program under ORS 100.405. A unit owner or director may decline to receive notice by electronic mail, facsimile or other form of electronic communication and may direct the board to provide notice in any other manner permitted under the Declaration or these Bylaws or the Oregon Condominium Act.

11.2 **Waiver**. No restriction, condition, obligation, or provision contained in these Bylaws shall be deemed to have been abrogated or waived by reason of any failure to enforce the same, regardless of the number of violations or breaches thereof which may occur.

11.3 **Action Without a Meeting**. Any action that the Oregon Condominium Act, the Declaration or these Bylaws require or permit the owners or directors to take at a meeting or ballot meeting may be taken without a meeting or ballot meeting if a consent in writing setting forth the action so taken is signed by all the owners or directors entitled to vote on the matter. The consent, which shall have the same effect as a unanimous vote of the owners or directors, shall be filed in the records of minutes of the Association.

11.4 **Invalidity; Number; Captions**. The invalidity of any part of these Bylaws shall not impair or affect in any manner the validity, enforceability or effect of the balance of these Bylaws. As used in these Bylaws, the singular shall include the plural, and the plural the singular. The masculine and neuter shall each include the masculine, feminine and neuter, as the context requires. All captions are intended solely for convenience of reference and shall in no way limit any of the provisions of these Bylaws.

11.5 **Conflicts**. These Bylaws are intended to comply with the Oregon Condominium Act and the Declaration. In case of any irreconcilable conflict, such statute and document shall control over these Bylaws or any rules and regulations adopted hereunder.

MEMORANDUM

TO: Marion County Hearings Officer

FROM: Marion County Planning Division/Reich

SUBJECT: Zone Change/Comprehensive Plan/Conditional Use
Case 09-5/US Leaseco Inc.

DATE: May 12, 2009

The Marion County Planning Division has reviewed the above named case and offers the following comments:

FACTS:

1. The subject property consists of 2 tax lots containing a total of 27.48 acres designated Primary Agriculture in the Marion County Comprehensive Plan (MCCP) and zoned EFU (EXCLUSIVE FARM USE) in the Marion County Rural Zoning Ordinance (MCRZO).

2. The properties are located at the northwest corner of Keil Road and Airport Road and consist of tax lot 400 (T04; R1W; S12B) and tax lot 100 (T04; R1W; S11A). Each of the two tax lots contains a dwelling, wells, septic systems, and accessory structures. Based on previous land use decisions and building permit approvals, the tax lots are considered legal parcels for land use purposes.

3. Surrounding properties to the east, south, and north are zoned EFU and consist of various sized parcels in farm use. A religious retreat facility borders to the north. Property to the west is zoned P and in use as Aurora State Airport.

4. The applicants are requesting to change the Comprehensive Plan designation from Primary Agriculture to Public, to change the zone from EFU (EXCLUSIVE FARM USE) to P (PUBLIC) and for a conditional use to establish airport related commercial and industrial uses on the newly zoned property.

5. Marion County Tax Office provided information on the tax status of the properties.

City of Aurora comments on the agricultural designation of the lands, concerns of the septic system affecting wells in the area, roadway traffic, and the applicant's Goal 14 exception reasons.

All other contacted agencies contacted either failed to respond or stated no objection to the proposal at the time this report was written.

In addition to other agencies' comments, comments were received from interested persons at and near the airport. These comments expressed concerns over air traffic, noise, development on high-value soils, traffic, lack of a tower at the airport, stormwater runoff, and whether the criteria for goal exceptions is met.

STAFF FINDINGS AND ANALYSIS:

6. In land use actions of this type, the applicants have the burden of proving all applicable standards and criteria are met. This report will outline the standards and criteria that must be satisfied in order for an approval to be granted. If the applicants supplied argument or evidence to address specific criteria, their response will be summarized.

GOAL 14 EXCEPTION:

7. The applicants are requesting to change the Comprehensive Plan designation from Primary Agriculture to Public and to change the zoning from EFU (Exclusive Farm Use) to P (Public). Land use applications of this nature must be consistent with Statewide Planning Goals. In this specific case, Statewide Planning Goal 3—Agriculture and Goal 14—Urbanization pertain to the proposal, and an exception to these goals must be obtained in order for the proposed change to be approved.

The mechanism for not applying a specific goal, in this case the agricultural lands goal and the urbanization goal is the goal exception process. The process requires specific findings justifying why lands are not available for resource use. There are three types of exceptions that can be made: physically developed, irrevocably committed and reasons. In this instance the applicants indicate that they are requesting a reasons exceptions to the goals.

8. Goal exceptions are governed by Statewide Planning Goal 2 and implemented by OAR 660-004. Planning and zoning for exception areas is governed by OAR 660-04-018, which states:

(1) Purpose. This rule explains the requirements for adoption of plan and zone designations for exceptions. Exceptions to one goal or portion of a one goal do not relieve a jurisdiction from the remaining goal requirements and to not authorize uses, densities, public facilities and services, or activities other than those recognized or justified by the applicable exception. Physically developed or

irrevocably committed exceptions under OAR 660-004-0025 and 660-004-028 are intended to recognize and allow continuation of existing types of development in the exception area. Adoption of plan and zoning provisions that allow changes in existing types of uses, densities, or services requires the application of the standards outlined in this rule.

(4) Reasons Exceptions:

(a) When a local government takes an exception under the "Reasons" section of ORS 197.732(1)(c) and OAR 660-004-0020 through 660-004-0022, plan and zone designations must limit the uses, density, public facilities and services, and activities to only those that are justified in the exception;

(b) When a local government changes the types or intensities of uses or public facilities and services within an area approved as a "Reasons" exception, a new Reasons exception is required.

9. OAR 660-014-0040 establishes a specific set of criteria for an exception to Goal 14 to permit the establishment of new urban development on undeveloped rural lands:

(1) As used in this rule, "undeveloped rural land" includes all land outside of acknowledged urban growth boundaries except for rural areas committed to urban development. This definition includes all resource and nonresource lands outside of urban growth boundaries. It also includes those lands subject to built and committed exceptions to Goals 3 or 4 but not developed at urban density or committed to urban level development.

The property is outside any urban growth boundary on rural land. An exception to Goal 3 is requested, also, as part of this request, but not required to approve an exception to Goal 14.

(2) A county can justify an exception to Goal 14 to allow establishment of new urban development on undeveloped rural land. Reasons that can justify why the policies in Goals 3, 4, 11 and 14 should not apply can include but are not limited to findings that an urban population and urban levels of facilities and services are necessary to support an economic activity that is dependent upon an adjacent or nearby natural resource.

The applicants argue that economically, this location next to the airport is under the ownership of the applicant, is situated next to suppliers of goods and services they use, concentrates airport related businesses in one area, and contributes to the economic activity in the region.

Staff would also point out that the existing airport is a quasi-urban use, having been found as to be an "urban public facility" in Murray et al. v. Marion County, 23 OR LUBA 268 (1992). Also, airports tend to be located away from, or on the periphery

of, urban land. Therefore, it would not be unusual to find an airport providing a more urban level of development on rural land.

(3) To approve an exception under section (2) of this rule, a county must also show:

(a) That Goal 2, Part II (c)(1) and (c)(2) are met by showing that the proposed urban development cannot be reasonably accommodated in or through expansion of existing urban growth boundaries or by intensification of development in existing rural communities;

The applicant points out that the airport and surrounding property zoned public was originally intended to be included in the Aurora Comprehensive Plan, but that the city was unable to justify that amount of industrial/commercial land. It also wouldn't be reasonable to extend the existing UGB to the airport because of intervening resource land. Since the business depends on air traffic for its operation, it must be located at an airport. No other rural communities (such as Brooks, Mehama, Labish Village, etc.) have an airport. Adding air traffic to an existing rural community would greatly intensify the use; therefore, development of this use in a rural community would not be practical.

(b) That Goal 2, Part II (c)(3) is met by showing that the long-term environmental, economic, social and energy consequences resulting from urban development at the proposed site with measures designed to reduce adverse impacts are not significantly more adverse than would typically result from the same proposal being located on other undeveloped rural lands, considering:

(A) Whether the amount of land included within the boundaries of the proposed urban development is appropriate, and

(B) Whether urban development is limited by the air, water, energy and land resources at or available to the proposed site, and whether urban development at the proposed site will adversely affect the air, water, energy and land resources of the surrounding area.

According to the applicant, the amount of land needed for the use includes outdoor storage, parking, and access areas, as well as well and septic facilities. Due to the size of the equipment worked on, a large structure is also necessary: 120,000 square feet. The applicant points out that the 2000 Aurora State Airport Master Plan references the need for additional fixed based operators, of which this use would be one. This use would also help provide some of the need for services and aircraft at the airport identified in the master plan. The applicant has provided evidence that the property can be adequately serviced by rural facilities, such as a well and septic system. The rural transportation system should be adequate to handle the additional

traffic introduced by the proposed development. The Public zone requires a Traffic Impact Analysis for each new use established at the airport. It can be made a condition of the conditional use portion of this application that the applicant provide evidence that the use will not adversely impact the traffic facilities in the area, or that any impacts can be adequately mitigated.

In addition, staff would point out that the consequences of establishing this use on other undeveloped rural lands could be far more significant that establishing it in proximity to an existing airport. Aurora Airport offers an existing runway for aircraft and roadway surfaces for parking, hanger storage, and access to surrounding roads that other rural lands would not offer. Also, the airport is able to better control aircraft approach patterns and noise having all the aircraft activity concentrated at one location than if it existed on various undeveloped rural parcels. Locating adjacent to the existing airport significantly reduces the environmental, economic, social and energy consequences that would result if this use were established on other undeveloped rural land away from the airport. Since rural services will be able to be adequately established on the property, there should be no impact to water resources. Surrounding landowners will be able to continue the use of their properties, predominately farming, as they have next to the existing airport in the past. The energy savings are significant over locating on other undeveloped rural land. Although the air resource in the area will not necessarily be impacted, the noise from the use may impact surrounding uses. However, since the airport use of this parcel is next to the existing airport, the noise impacts would be centered at and approaching the airport. The addition of 27 acres of land in airport use to the existing 271 acres of airport should not significantly increase the impact of noise on neighbors to the airport. In addition, any commercial or industrial airport related used would have to be approved as conditional uses in the Public zone and compatibility with surrounding uses would have to be ensured through that process.

(c) That Goal 2, Part II (c)(4) is met by showing that the proposed urban uses are compatible with adjacent uses or will be so rendered through measures designed to reduce adverse impacts considering:

(A) Whether urban development at the proposed site detracts from the ability of existing cities and service districts to provide services; and

(B) Whether the potential for continued resource management of land at present levels surrounding and nearby the site proposed for urban development is assured.

Existing cities and service districts will not have to provide services to the newly zoned area. The property may connect to the existing fire suppression

district at the airport, but does not have to; it can provide its own fire suppression consistent with the requirements of the Oregon Fire Marshall and Aurora Fire Department. The applicants have provided an analysis of traffic that determines the roadways surrounding the property are adequate to handle additional traffic of uses allowed in the Public zone. The airport has not had a significant impact on the ability of surrounding lands to be farmed since the inception of the airport in 1943. Staff would point out that large parcel, open space uses, such as agricultural uses, surrounding an airport are preferred over more densely populated uses because of safety concerns.

(d) That an appropriate level of public facilities and services are likely to be provided in a timely and efficient manner; and

The property will depend entirely on rural services; no urban facilities will be required.

(e) That establishment of an urban growth boundary for a newly incorporated city or establishment of new urban development on undeveloped rural land is coordinated with comprehensive plans of affected jurisdictions and consistent with plans that control the area proposed for new urban development.

Demonstration of the proposed rezoning with the goals and policies of the Marion County Comprehensive Plan will be evaluated later in this report. The applicant points out that the proposal is consistent with the state master plans for the airport.

10. Based on the above discussion, staff determined that the proposal meets the requirements for an exception to Goal 14 and that it would be appropriate to locate this level of urban development at this location.

GOAL 3 EXCEPTION

11. In addition to meeting the requirements for an exception to Goal 14, the applicant must demonstrate that an exception go Goal 3 is appropriate. The "reasons" exception process is outlined in OAR 660-004-0018 (4), 660-004-0020 (2) and 660-004-0022 (1):

OAR 660-004-0018 (4):

(a) When a local government takes an exception under the "Reasons" section of ORS 197.732(1)(c) and OAR 660-004-0020 through 660-004-0022, plan and zone designations must limit the uses, density, public facilities and services, and activities to only those that are justified in the exception;

(b) When a local government changes the types or intensities of uses or public facilities and services within an area approved as a "Reasons" exception, a new "Reasons" exception is required;

The request is to rezone the property to Public to accommodate airport and airport related uses. It can be made a condition of the zone change that other urban types uses not be permitted without a new goal exception.

660-004-0020 (2)

(2) The four factors in Goal 2 Part II(c) required to be addressed when taking an exception to a Goal are:

(a) "Reasons justify why the state policy embodied in the applicable goals should not apply": The exception shall set forth the facts and assumptions used as the basis for determining that a state policy embodied in a goal should not apply to specific properties or situations including the amount of land for the use being planned and why the use requires a location on resource land;

The applicant argues that some of the facts and evidence were already presented as part of the Goal 14 exception.

(b) "Areas which do not require a new exception cannot reasonably accommodate the use":

The applicant argues that the site adjacent to the Aurora Airport features a "unique combination of attributes not found on any other property in the region." Among these attributes are being located next to an existing airport, being near service and parts providers for the business, being located in an area with a concentration of other airport suppliers to and customers of the business, being located near the resource pool of potential employees of the business, good access to surrounding roads, and access to the airport runway via "through the fence" operations. Also, the proposed location minimizes the impact on residential, commercial or industrial uses that would otherwise experience a significant impact if this use were located in nearby cities or on undeveloped rural land away from the airport.

(c) The long-term environmental, economic, social and energy consequences resulting from the use at the proposed site with measures designed to reduce adverse impacts are not significantly more adverse than would typically result from the same proposal being located in other areas requiring a Goal exception [remainder of section not reproduced in this report].

Among the other sites analyzed by the applicant to locate this business, were other farm properties adjacent to the airport. Other farm properties are being more intensely farmed than the subject property, or contain large amounts of native stands of timber that would have to be removed, at a significant cost to energy resources. The existing location is directed away from surrounding residential uses as much as possible and is buffered from other uses in the area by adjacent roads. Other locations in the state were also considered by the applicant, but only Aurora offered the best mix of customers, suppliers, and employees necessary for the business to operate. Staff notes that, as mentioned in the Goal 14 exception discussion, locating the proposed use elsewhere could have significant impacts on surrounding uses and on energy, environmental, land and other resources. These impacts are minimized by locating the use on this property.

(d) "The proposed uses are compatible with other adjacent uses or will be so rendered through measures designed to reduce adverse impacts". The exception shall describe how the proposed use will be rendered compatible with adjacent land uses. The exception shall demonstrate that the proposed use is situated in such a manner as to be compatible with surrounding natural resources and resource management or production practices. "Compatible" is not intended as an absolute term meaning no interference or adverse impacts of any type with adjacent uses.

The applicant argues that the Aurora Airport was established in 1943 and has been compatible with surrounding uses since then. The small amount of expansion should not significant increase the impact on surrounding land uses or render the airport not compatible with surrounding uses. Portions of the property that are not developed at this time would remain in agricultural use until such time as they are developed, and the appropriate conditional use applications are approved.

Staff would point out that the airport is not always compatible with surrounding uses. Sometimes, agricultural practices, or surrounding water impoundments, attract birds, which pose a severe threat to planes taking off and landing at the airport. Also, use of the airport has impacted residences with the impacts of noise and over flight patterns. While a tower would lessen the impact to neighboring property owners by controlling the approach and takeoff patterns and an instrumentation approach would minimize the noise of aircraft by modifying the angles of approach, these have not yet been constructed at the airport. While the airport works with pilots to voluntarily reduce their impact on surrounding land uses, there are no regulations the county can enforce regarding flight patterns since air traffic at this airport is regulated by the Federal Aviation Administration and there are no structural efforts in place (such as a tower or instrumentation approach) to minimize the impact on surrounding land use. The county does apply an Airport Safety Overlay Zone, which applies safety

standards to airspace surrounding and approaching the airport. While the existing airport may not be entirely compatible with surrounding uses, the impact of this additional 27 acres should not significantly increase the impact on surrounding uses or render the airport incompatible with surrounding uses.

660-004-0022 (1)

An exception Under Goal 2, Part II(c) can be taken for any use not allowed by the applicable goal(s). The types of reasons that may or may not be used to justify certain types of uses not allowed on resource lands are set forth in the following sections of this rule:

(1) For uses not specifically provided for in subsequent sections of this rule or in OAR 660-012-0070 or chapter 660, division 14, the reasons shall justify why the state policy embodied in the applicable goals should not apply. Such reasons include but are not limited to the following:

(a) There is a demonstrated need for the proposed use or activity, based on one or more of the requirements of Goals 3 to 19; and either

(b) A resource upon which the proposed use or activity is dependent can be reasonably obtained only at the proposed exception site and the use or activity requires a location near the resource. An exception based on this subsection must include an analysis of the market area to be served by the proposed use or activity. That analysis must demonstrate that the proposed exception site is the only one within that market area at which the resource depended upon can reasonably be obtained; or

(c) The proposed use or activity has special features or qualities that necessitate its location on or near the proposed exception site.

The applicant, while not addressing these criteria specifically, provides evidence that there is a need for additional airport and airport related uses at the Aurora Airport and that the proposed use is dependent on being located at Aurora Airport, not other exception land, rural land, or land inside cities away from the economic activity at the airport. The applicant addresses the special features and qualities that necessitate the location of the proposed exception site on this property.

12. Based on the above discussion, the applicant meets the criteria for a goal exception to Goal 3—Agricultural Lands on the subject property.

13. The applicant provides an analysis of how the other statewide planning goals are met by the proposal, aside from Goals 3 and 14, for which exceptions are taken as part of this application.

COMPREHENSIVE PLAN AMENDMENT

14. All Comprehensive Plan changes are subject to review by the State Department of Land Conservation and Development (DLCD). The DLCD was notified as required by State Law and has not commented prior to this report being prepared.

15. The MCCP establishes procedures to be used when considering plan amendments. Plan changes directly involving 5 or fewer properties will be considered a quasi-judicial amendment. The amendment will be reviewed by the zone change procedures established in the MCRZO. A plan amendment of this type may be processed simultaneously with a zone change request with the zone change procedure outlined in Chapter 123 of the MCRZO.

16. The MCCP does not contain specific review criteria for plan amendments, however, any amendment must be consistent with its applicable goals and policies. The policies that need to be addressed by applicant include:

Agricultural Land Policy #2: Maintain primary agricultural lands in the largest areas with large tract to encourage larger scale commercial agricultural production.

Although the applicant has requested an exception to Goal 3, the applicant points out that the property is not as conductive to farming as other parcels in Marion County. It is 27 acres, smaller than the minimum parcel size in the EFU zone and is bordered by roads on two sides and the airport on one site, not allowing the property to be expanded or easily farmed with another adjacent parcel.

Agricultural Land Policy #3: Discourage development of non-farm uses on high value farmland and ensure that if such uses are allowed that they do no cause adverse impacts on farm uses.

As discussed earlier under the Goal 3 and 14 exceptions, the non-farm use of the proposed parcel will not have an adverse impact on surrounding farm uses.

Rural Service Policies:

1. The impact on existing services and the potential need for additional facilities should be evaluated when rural development is proposed.

2. It is the intent of Marion County to maintain the rural character of the areas outside of urban growth boundaries by only allowing those uses that do not increase the potential for urban services.

3. Only services necessary to accommodate planned rural uses should be provided unless it can be shown that the proposed service will not encourage development inconsistent with the rural density and character of the area. These uses would encourage inconsistent development in the adjoining rural area.

4. The sizing of public or private service facilities shall be based on maintaining the rural character of the area.

The applicant has demonstrated that the use would be dependent solely on rural services. Provision of the necessary services to serve the property developed with airport and airport related uses would not encourage development inconsistent with the rural density and character of the area or encourage development of the adjoining rural area. It has already been demonstrated that the proposed use adjacent to the airport is consistent with those airport uses. The Public zone has provisions to ensure that newly proposed uses have adequate transportation and septic facilities in place prior to development.

Air, Rail, Water, Energy and Pipeline Transportation Policies #1: Airports and airstrips shall be located in areas that are safe for air operations and should be compatible with surrounding uses.

The applicant argues that the airport has been in operation since 1943 and has proven during that time to be a safe location for an airport. The airport overlay zone is applied to the property and surrounding properties to ensure the continued safe operation of the airport. Surrounding uses are predominately agricultural operations. The low density development at the airport has ensured it stay reliant on rural services only. The proposal is not for a new airport, but to expand an existing airport operation that has a proven safety record. The proposed expansion would be compatible with surrounding uses, as described elsewhere in this report.

Right-Of-Way Policies #2: New transportation facilities of all types should use existing rights-of-way to the extent possible to minimize disruption to existing land use.

The property would use existing roadways for access to the parcel.

Economic Development Goals:

a. Provision of increased employment opportunities for all residents of the County;
b. Maintenance of a strong agricultural economy;
d. Diversification of the economic base of communities, and expansion of seasonal employment opportunities to year-round status wherever possible;
e. Provision of sufficient areas for future industrial land use;
f. Development of a transportation system for the safe and efficient movement of persons and goods for present needs;
g. Coordination of planning and development of public facilities;
h. Development of a strong tourist economy in appropriate areas;
i. Achievement of a natural resource use pattern that provides for tomorrow's needs, today's needs and the protection of the environment.

The applicant argues that the economic impacts of the proposed use would further the economic development goals in the Marion County Comprehensive Plan, while not significantly affecting the agricultural economy. The use would augment the

existing transportation system by utilizing the airport runway for additional commercial and industrial uses.

17. Based on the above discussion, the proposal is consistent with the applicable goals and policies contained in the Marion County Comprehensive Plan.

ZONE CHANGE

18. The applicant identified and addressed zone change criteria outlined in the Marion County Rural Zoning Ordinance Chapter 123.060. The criteria that apply in this instance are:

    (a) The proposed zone is appropriate for the Comprehensive Plan land use designation on the property and is consistent with the goals and policies of the Comprehensive Plan and the description and policies for the applicable land use classification in the Comprehensive Plan; and

    (b) The proposed change is appropriate considering the surrounding land uses and the density and pattern of development in the area; and

    (c) Adequate public facilities, services, and transportation networks are in place, or are planned to be provided concurrently with the development of the property; and

    (d) The other lands in the County already designated for the proposed use are either unavailable or not as well suited for the anticipated uses due to location, size or other factors; and

    (e) If the proposed zone allows uses more intensive than uses in other zones appropriate for the land use designation, the new zone will not allow uses that would significantly adversely affect allowed uses on adjacent properties zoned for less intensive uses.

19. The P (Public) zone is the only zone that implements the Public designation. That this zone and designation is consistent with the goal and policies of the Comprehensive Plan has been demonstrated elsewhere in this report. It has been demonstrated that the proposed use is compatible with surrounding uses and consistent with the pattern of development in the area (adjacent to an existing airport). The property would rely on rural facilities and not require any urban facilities. There are no other lands in Marion County designated Public which are near an airport and could accommodate this use. No other zone implements the Public designation. The proposal meets the criteria for a zone change.

CONDITIONAL USE

20. The applicant is also applied for a conditional for airport related commercial and industrial uses in the Public zone. The criteria that apply to this are found in Chapter 119.070 of the Marion County Rural Zoning Ordinance:

(a) That it has the power to grant the conditional use;

(b) That such conditional use, as described by the applicant, will be in harmony with the purpose and intent of the zone;

(c) That any condition imposed is necessary for the public health, safety or welfare, or to protect the health or safety of persons working or residing in the area, or for the protection of property or improvements in the neighborhood.

20. The conditional use is dependent on the comprehensive plan change and zone change. Only the Board of Commissioners can grant a comprehensive plan change; therefore, only the Board can grant the conditional use in this case. As has been demonstrated previously, the proposed use is appropriate in the P zone and will be compatible with surrounding uses. It will be determined below whether the proposal meets the criteria for development in the Public zone. Any condition imposed will be necessary for the public health, safety or welfare, or to protect the health or safety of persons working or residing in the area, or for the protection of property or improvements in the neighborhood. The proposal meets the criteria for a conditional use.

PUBLIC ZONE

21. The Public zone contains criteria regarding the scale of commercial uses and property development standards that also must be satisfied by this proposal. The criteria that apply to this are found in Chapter 171.040 and 171.060 of the Marion County Rural Zoning Ordinance:

SCALE OF COMMERCIAL USES:

(A) New commercial uses in conjunction with public uses may be established up to a maximum of 3,500 square feet of floor area.

(B) Lawfully established commercial uses existing as of the date of adoption of this ordinance may be expanded up to 3,500 square feet of floor area, or an additional 25% of the floor area that existed as of the date of adoption of this ordinance, whichever is greater.

(C) Airport related uses located at the Aurora Airport are not subject to the size limitations in (A) and (B) of this section.

(D) Except as established in (B), for a commercial use to exceed the square foot limitations requires taking an exception to Goal 14. Such exception shall be processed as an amendment to the Marion County Comprehensive Plan.

The county has previously taken an exception to Goal 14 to permit development of uses at the Aurora Airport and surrounding land zoned Public to exceed the size limitations in the Public zone. This exception was taken because of the large existing sizes of development at the airport (such as hangars, aircraft storage, aircraft maintenance facilities, etc.). These uses tend to be larger than the size limits because aircraft are large and require large open areas around them for safe storage, repair and operation. No size limits apply to the proposed development consistent with 171.040(C) above.

PROPERTY DEVELOPMENT STANDARDS:

(A) HEIGHT. No building or structure in a P zone shall exceed 6 stories or 70 feet, provided that buildings or structures shall set back from every street and lot line 1 foot for each foot of height of the building in excess of 35 feet in addition to all other yard and setback requirements herein specified.

(B) FRONT YARD. Front yard shall be a minimum of 20 feet. No parking shall be permitted within the minimum front yard area.

(C) SIDE YARDS. Where the side of a lot in a P zone abuts upon the side of a lot in any "R" zone, there shall be a minimum side yard of 10 feet. Otherwise there shall be no minimum side yard setback. Where the side of a lot abuts upon a street there shall be a minimum side yard of 20 feet wherein no parking shall be permitted.

(D) REAR YARD. In a P zone there shall be a rear yard that shall have a minimum depth of 30 feet.

(E) LOT AREA AND COVERAGE. The minimum requirements in P zones for dwellings shall be 1 acre except 6,000 square feet inside an unincorporated community boundary where public sewer and water service is provided. No main building, including dwellings, shall occupy more than 30% of the lot area.

(F) OPEN STORAGE.

(1) All yard areas, exclusive of those required to be landscaped as provided in Section 171.060 (G), may be used for materials and equipment storage areas related to a use permitted in the P zone, provided such area is screened so it cannot be seen from public roads, or from dwellings on property in other zones.

(2) The surface of open storage areas, including automobile and truck parking area shall be paved or graveled and maintained at all times in a dust-free condition.

(G) LANDSCAPING. The area within 20 feet of a street shall be landscaped. As a condition of approval for a conditional use additional landscaping may be required if necessary to make the use compatible with the area.

(H) PERFORMANCE STANDARDS. No land or structure shall be used or occupied unless maintained and operated in continuing compliance with all applicable standards adopted by the Oregon Department of Environmental Quality.

(I) SEWAGE DISPOSAL. Demonstrate that the development will not exceed the existing carrying capacity of the local sewage disposal system or has an on-site sewage disposal site approved by Marion County or the Department of Environmental Quality.

(J) TRAFFIC ANALYSIS. Demonstrate that the development will be consistent with the identified function, capacity, and level of service of transportation facilities serving the site. A transportation impact analysis, approved by the Marion County Department of Public Works, may be required prior to building permit approval.

The standards in 171.060 (A) through (G) would be applied during the permitting process for any structure on the property and a site plan demonstrating compliance with the standards can be made a condition of any approval. Demonstration of the standards in (H) through (J) can be made a condition of any approval.

CONCLUSION

22. Based on the above discussion, the applicant had demonstrated that exceptions to Goals 3 and 14 should be approved, that other Statewide Land Use Goals are satisfied by the proposal, that the goals and policies contained in the Marion County Comprehensive Plan are met by the proposal, that the criteria for a zone change and conditional use are satisfied, and that the standards in the Public zone can be complied with consistent with conditions of approval. Staff recommends the Hearings Officer approve the Comprehensive Plan/Zone Change/Conditional Use as described.

23. If the request is approved, the following are recommended conditions for this proposal:

1. Prior to issuance of building permits, the applicant shall provide a Transportation Impact Analysis meeting the approval of Marion County Public Works.

2. Prior to issuance of building permits, the applicant shall provide a site plan demonstrating compliance with the development standards in the Public zone.

3. Prior to issuance of building permits, the applicant shall provide evidence of compliance with Oregon Department of Environmental Quality standards.

4. Prior to issuance of building permits, the applicant shall provide evidence of an approved fire suppression system by either the State Fire Marshall or Aurora Fire District.

5. Prior to issuance of building permits, the applicant shall provide evidence of adequate on-site sewage disposal.

6. Prior to issuance of building permits, the applicants shall sign and submit a Farm/Forest Declaratory Statement to the Planning Division for each parcel. The applicant shall record this statement with the Marion County Clerk after it has been reviewed and signed by the Planning Director.

7. The comprehensive plan/zone change is approved for airport and airport related uses only. All other uses in the Public zone would require a new goal exception and justification for that use.

THE MARION COUNTY BOARD OF COMMISSIONERS HEREBY ORDAINS AS FOLLOWS:

SECTION I. Purpose

This matter comes before the Marion County Board of Commissioners ("Board") on the application of US Leaseco, Inc, to change the zone from EFU (Exclusive Farm Use) to P (Public), to change the Comprehensive Plan designation from Primary Agriculture to Public, to take exceptions to Statewide Planning Goal 3 (Agricultural Lands) and Goal 14 (Urbanization), and for a conditional use for airport related uses on 27.48 acres located at 14497 Keil Road NE and 22265 Airport Road NE, Aurora, Oregon. [T4S, R1W, (Section 11A, tax lot 100) and (Section 12B, tax lot 400).

SECTION II. Procedural History

The Marion County Hearings Officer held a duly noticed public hearing on this application on June 3, 2009. Mailed notice was provided to all property owners within 750 feet of the subject property at least 20 days before the hearing. On December 1, 2009, the Hearings Officer issued a report recommending the Board grant the request on 15 acres. The Board held a duly noticed public hearing on the application on January 13, 2010. The hearing was closed and record was left open for written testimony until January 27, 2010. At its regular session on February 10, 2010, the Board considered the Panning Division file, the Hearings Officer's recommendation, all arguments of the parties and is otherwise fully advised in the premises.

SECTION III. Adoption of Findings and Conclusion

After careful consideration of all facts and evidence in the record, the Board adopts as its own the Findings of Facts and Conclusions of Law contained in Exhibit A, attached hereto, and by this reference incorporated herein.

EXHIBIT M

SECTION IV. Action

The requested Comprehensive Plan designation change from Primary Agriculture to Public is hereby **GRANTED.** The requested zone change from (Exclusive Farm Use) to P-LU (Public – Limited Use Overlay) zone and conditional use to operate an airport related use is hereby **GRANTED,** subject to conditions identified in Exhibit B, attached hereto, and by this reference incorporated herein.

The property rezoned by this Ordinance is described in Exhibit C, attached hereto and by this reference incorporated herein. The Official Marion County Zoning Map shall be changed pursuant to the Marion County Zone Code 17.110.660 to reflect the new zoning.

SECTION V. Effective Date

Pursuant to Ordinance 669, this is an Administrative Ordinance and shall take effect 21 days after the adoption and final signatures of the Marion County Board of Commissioners.

SIGNED and FINALIZED this 10th day of March, 2010, at Salem, Oregon.

MARION COUNTY BOARD OF COMMISSIONERS

Janet Carlson
Chair

D. Kim Hulett
Recording Secretary

JUDICIAL NOTICE

Oregon Revised Statutes, Chapter 197.830, provides that land use decisions may be reviewed by the Land Use Board of Appeals by filing a notice of intent to appeal within 21 days from the date this Ordinance becomes final.

EXHIBIT M

EXHIBIT A

FINDINGS OF FACT AND CONCLUSIONS OF LAW

The Marion County Board of Commissioners, after careful consideration of all the testimony and evidence in the record, makes the following findings of fact and conclusions of law in Planning Case No. ZC/CP/CU 09-005.

1. The subject property consists of two tax lots containing a total of 27.48 acres designated Primary Agriculture in the Marion County Comprehensive Plan (MCCP) and zoned EFU (EXCLUSIVE FARM USE) in the Marion County Rural Zoning Ordinance (MCRZO).

2. The properties are located at the northwest corner of Keil Road and Airport Road and consist of tax lot 400 (T04; R1W; S12B) and tax lot 100 (T04; R1W; S11A). Each of the two tax lots contains a dwelling, wells, septic systems, and accessory structures. Based on previous land use decisions and building permit approvals, the tax lots are considered legal parcels for land use purposes.

3. Surrounding properties to the east, south, and north are zoned EFU and consist of various sized parcels in farm use. A religious retreat facility borders to the north. Property to the west is zoned Public (P) and in use as Aurora State Airport.

4. The Applicant is requesting to change the Comprehensive Plan designation from Primary Agriculture to Public, to change the zone from EFU to P, and for a conditional use to establish airport related commercial and industrial uses on the newly zoned property.

5. Approval of the proposed Zone Change, Comprehensive Plan Change and Conditional Use (ZC/CP/CU) would allow a zone change from EFU to P, a Comprehensive Plan change from Primary Agriculture to Public with an exception to Statewide Planning Goals 3 and 14, and for a conditional use for airport related uses on a 27.48-acre property.

6. The Marion County Planning Division requested comments on the subject application from various governmental agencies and area advisory committee members.

   A. **Marion County Department of Public Works (DPW)** reviewed the proposal and indicated that the following requirements address impacts created by approval of the proposed ZC/CP/CU:

      STREETS

      1. In accordance with Marion County Rural Transportation System Plan (MCRTSP) Section 10.3.5, Policy #10: The number of access points on Arterial and Major Collector roadways shall be kept to a minimum to reduce the interruption to traffic flow and to promote safety. Hence, no new direct access will be permitted to Airport Road. Upon redevelopment of the remainder of the property, the existing accesses serving the private residences shall be closed including drainage ditch lines restored, and access gained through a common access to Keil Road. Based on the Applicant's statement that the proposed facility will be limited to 70 employees, only one access to Keil Road will

EXHIBIT M

be allowed and shall meet spacing standards. An additional access to Yellow Gate would be acceptable.

2. In accordance with Marion County Ordinance #651, access permits are required for any new access or change in use of the existing access to the public right-of-way. If this ZC/CP/CU is approved, the Applicant will be required to apply for an "Access Permit." Driveways must meet sight distance, design, spacing, and safety standards.

3. SR 551 (Hubbard Cutoff Road NE) in this vicinity is under the jurisdiction of the Oregon Department of Transportation (ODOT). The Applicant shall meet ODOT requirements for traffic analysis, mitigation, etc. It will be the Applicant's responsibility to provide proof that this condition has been met.

4. The traffic from the proposed development may impact the City of Aurora roads. The Applicant shall also meet the City of Aurora's requirements for traffic analysis and mitigation. It will be the Applicant's responsibility to provide proof that this condition has been met.

5. Notwithstanding Public Works requirements for access, the local fire district has authority to require that driveways and private easements either meet fire district standards for access, have a fire sprinkler suppression system installed on any proposed structure, or be approved by waiver of the local fire marshal, prior to the issuance of building permits. The *Marion County Fire Code Applications Guide* also specifies a suitable turnaround area for emergency vehicles for an access in excess of 150 feet in length, and turnouts every 400 feet, as applicable.

6. Chapter 172 of the Marion County Rural Zoning Ordinance requires the Applicant to show sufficient dedicated right-of-way (R/W) on the plat to provide an R/W half-width of 30 feet along the entire subject property frontage, including 30-foot property radius corners. The nexus for this requirement is the potential for additional traffic associated with the development. Based on review of county tax assessor maps, it appears that a 30-foot corner radius is needed in the southeast corner of 22265 Airport Road NE. The R/W shall be dedicated prior to issuance of a building permit and/or operation of the proposed airport related uses. All dedications shall be to the public, not Marion County. Please contact Right-of-Way Coordinator, Patricia Nordhal, at (503) 365-3104 concerning this matter.

7. A Transportation Impact Analysis (TIA) is typically required for a zone change. In this case, the change from EFU to P will not increase the trip potential significantly. Therefore, a TIA was not required for the zone change. However, the conditional use does have the potential to create a significant traffic impact, and therefore a TIA was required for the conditional use. The TIA prepared by Group Mackenzie, dated May 27, 2009, for the subject property assumes a cap of 70 employees. Based on this level of development, there is a small level of impact to the operational capacity of the county and state roadway systems. The TIA proposes, and staff concurs, that it is appropriate to contribute a share of the cost of identified projects in the area in proportion to their impact. The following conditions are recommended to mitigate the traffic impacts of the development:

EXHIBIT M

a. The developer agrees to a LU (Limited Use) overlay with a maximum of 70 employees. If the use were to intensify, then additional mitigation may be required in the future.

b. The Applicant shall contribute a proportional share of the cost of planning, designing, and constructing a signal and turn lanes on Ehlen Road at the intersection with Airport Road, improvements to the OR551/Ehlen Road intersection as identified in the 2010-2013 Draft Oregon Statewide Transportation Improvement Program (STIP), and a left turn lane on Airport Road at the intersection with Keil Road. The basis for the proportional share shall be the percentage of traffic added by the development. This is calculated to be $51,125 and shall be paid as a condition of the conditional use. If the use changes, or additional employees are needed, then additional proportional share contributions may be required.

8. A civil site plan is required for 0.5-acres or more of proposed development. This should be submitted in advance of application for building permits to allow adequate time for review. A traffic circulation plan needs to be included.

9. In accordance with Chapter 172 of the Marion County Rural Zoning Ordinance, if this development is approved, the Applicant will be required to improve Airport Road NE and Keil Road NE along their frontages to county standards as directed by the Public Works Department. This is anticipated to include vegetation clearing, slope and drainage work, and the addition of gravel shoulder along the roadways. These frontage improvements shall be included on the engineering plans for the proposed development, and will need to be complete prior to construction of any buildings and/or commencement of the proposed uses.

10. Prior to building permit approval, the Applicant shall provide a Declaration of Covenants for Road Maintenance Agreement regarding any non-county maintained access easements (form available from Public Works). Please contact Tedd Joling at (503) 584-7714 for information on this matter.

11. The Applicant is reminded of its responsibility to preserve and protect nearby roads and ditches to the satisfaction of Marion County Public Works throughout the use of the airport. Failure to preserve and protect the road and ditches may result in the user being responsible for replacing or reconstructing the damaged road or ditch at their expense.

STORM DRAINAGE / ENVIRONMENTAL

12. The Applicant is advised that construction of improvements on the property should not block historical or naturally occurring runoff from adjacent properties. Furthermore, site grading should not impact surrounding properties, roads, or drainage ways in a negative manner. The Applicant shall submit a site drainage plan to demonstrate that there is no negative impact.

13. The county requires any development 0.5 acre or larger to provide storm water detention for any increase in runoff. The existing site already has a storm water master plan and multiple detention systems. The Applicant will need to show that stormwater

EXHIBIT M

detention systems will retain enough of the storm-water runoff on site so that there is no net rate increase in storm-water flow from the subject property. Such a system shall be sized and modified so that it will detain the difference between a 5-year frequency storm with pre-development conditions and a 10-year frequency storm with development conditions. Storm drainage shall be discharged to a suitable outlet and, where applicable, evidence provided that an adequate easement exists for transit of the water to this outlet. Storm drainage improvements shall be built to Marion County Engineering and Construction Standards. Prior to issuance of building permits, the Applicant shall provide a storm drainage plan for the site that addresses drainage issues and includes detention elements. Acceptable drainage and detention systems must be in place prior to final building inspections.

14. Proof of issuance to the county of a National Pollutant Discharge Elimination System (NPDES) 1200-C permit is required for all construction activities that disturb one acre or more. If necessary, the NPDES permit is obtained through the DEQ.

GENERAL

15. The subject property is within the unincorporated area of Marion County. Transportation System Development Charges may be assessed upon development of the property.

16. Any work in the public right-of-way will require a permit from Public Works Land Development Engineering & Permits.

B. **Marion County Tax Office** provided information on the tax status of the properties.

C. **Department of State Land Conservation and Development (DLCD)** commented to the Hearings Officer that the Applicant's Goal 3 exception should be limited to only the acreage actually needed for the proposed building and operation.

All other contacted agencies either failed to respond or stated no objection to the proposal at the time this report was written.

7. **Application Background**. Applicant owns and operates a fleet of heavy, large helicopters focused almost exclusively in the United States on fire suppression activity for the United States Forest Service. Applicant desires to consolidate its United States repair and maintenance facilities, including its Corvallis facility, at the Aurora State Airport. Applicant's proposed, state-of-the-art, 126,000 square-feet facility will be used predominantly for the repair and maintenance of the helicopters as well as warehousing and storage of helicopter parts. The annual winter overhaul of each helicopter involves the complete dismantling of each aircraft and re-assembly for maintenance and repair. This facility will become HTS' United States headquarters.

Applicant owns 27 acres adjacent to the Aurora State Airport at the northwest corner of the intersection of Keil Road and Airport Road. By consolidating its operations near Portland International Airport, which serves as a critical transport hub for personnel and parts, Applicant estimates it will reduce its time and fuel costs by 75%. This efficiency will reduce its impact on the environment and the State's highway system. Aside from its proximity to Portland, the Aurora Airport is strategically important to HTS as it is home to two, very unique vendors and it is at the heart of the human resource pool that

EXHIBIT M

supplies HTS with the skilled labor force necessary for its operations. A similar operation and one of HTS's largest competitors, Columbia Helicopters, already operates a facility at the Airport. The Oregon Department of Aviation's Airport Layout Plan specifically identifies Applicant's property as being suitable for airport expansion.

Applicant's operations will bring numerous benefits to the area without imposing significant, negative impacts. Generally, after a brief period of test flights in the spring, Applicant's helicopters leave for the fire season and remain in the field from May to November. The helicopters are then flown back in November and grounded for winter overhaul until the following season. This brings the economic benefits and airport synergies of the facility without excessive impacts on either the airport or the surrounding community. In addition, Applicant's pilots are specialized and highly trained. The minimal number of flights and professional pilots minimize interference with existing airport operations and impact on neighboring properties. Applicant's commitment to compatibility with neighbors, as well as recognition of Applicant's need to locate in Aurora, is affirmed by a letter from the Manager of the Corvallis Airport, where Applicant is currently located. In addition, a letter from Russ Langbehn, a homeowner in the nearby neighborhood of Deer Creek Estates, supports Applicant's proposal and includes a petition of support signed by a majority of Deer Creek Estates residents.

Upon opening the facility, Applicant estimates it will contract for goods and services locally in the amount of $5,000,000 annually, increasing to $8,000,000 annually after completion of consolidation and anticipated growth in the following five years. Construction of the new facility is estimated to cost approximately $20,000,000 and will be contracted locally. The county's tax revenues on the assessed value of the facility are estimated to be approximately $150,000 annually. Upon occupancy, Applicant estimates this facility will generate 85 jobs with average salaries of approximately $50,000 to $60,000 annually, increasing to 160 jobs after full consolidation and growth. However, because over half the employees are in the field for extended periods of time, the traffic impacts of these jobs are minimal (at most, 70 employees will be onsite in any given day). This economic opportunity comes at a time when another significant employer at the airport, Artex Aircraft Supplies, Inc., is closing its doors and consolidating its operations away from Aurora to Arizona. Artex's closure has resulted in the loss of 154 jobs at the Aurora Airport. Unlike Artex, which leased its space at the airport, HTS is committing its resources to the Aurora Airport by consolidating its United States operations *to the airport* on land that it owns.

Applicant seeks an exception from Statewide Planning Goal 14 to site an urban use on rural land. Applicant also seeks an exception to Statewide Planning Goal 3 to amend the Comprehensive Plan designation from Primary Agriculture (PA) to Public (P), and the zoning from Exclusive Farm Use (EFU) to Public (P) on the subject property. Finally, because airport related operations are conditional uses in the P zone, Applicant also requests a conditional use permit to operate an airport related use on the site.

MCCP POLICIES AND GOALS

8. The comprehensive plan amendment must be consistent with the applicable MCCP goals and polices. The MCCP plan amendments Policy 2 provides that:

The procedures which Marion County will use to consider Comprehensive Plan amendments in addition to the requirements in state law, is as follows:

EXHIBIT M

Individual Property or Quasi-Judicial Amendments:

> Plan changes directly involving five or less properties will be considered a quasi-judicial amendment. Quasi-judicial amendments may be initiated by the subject property owners with an application form supplied by the Marion County Planning Division. The amendment will be reviewed by the zone change procedure established in the Marion County Zoning Ordinance. A plan amendment application of this type may be processed simultaneously with a zone change request.

This application involves one ownership of 27.48 acres. This is a non-legislative plan amendment. The application includes a plan amendment and zone change request as well as a request for a conditional use permit.

9. Applicant is seeking to have the comprehensive plan changed from Primary Agriculture to Public. The Board finds the proposed use to be industrial in nature. "Industrial Use" is defined in OAR 660-009-005(3) as follows:

> "Industrial Use" means employment activities generating income from the production, handling or distribution of goods. Industrial uses include, but are not limited to: manufacturing; assembly; fabrication; processing; storage; logistics; warehousing; importation; distribution and transshipment; and research and development. Industrial uses may have unique land, infrastructure, energy, and transportation requirements. Industrial uses may have external impacts on surrounding uses and may cluster in traditional or new industrial areas where they are segregated from other non-industrial activities.

Applicant's proposed facility on this site is a substantial employment activity that will be predominantly characterized by its use as a hub for the maintenance overhaul (disassembly and assembly) and repair of large, industrial-grade helicopters and the associated warehousing, storage, and distribution of parts and equipment for those helicopters. As the definition of Industrial Use contemplates, this industrial use has a unique land and transportation requirement that it be located at an airport.

While the facility will contain offices of those who manage the firefighting operations of the company, the predominant purpose and the majority of the space of the proposed facility is the repair and maintenance of industrial-grade aircraft (including complete disassembly and re-assembly) and substantial storage and warehousing for both spare parts and the aircraft themselves. While aerial transportation services are a necessary part of Applicant's operations at the subject property, the predominant use at the site are the industrial uses explained above.

Furthermore, even if the proposed facility were classified by Applicant's business of wilderness firefighting and oil exploration, the Board finds such classification more industrial than commercial. "Commercial use" is defined in OAR 660-022-0010(1) as "the use of land primarily for the retail sale of products or services, including offices. *It does not include factories, warehouses, freight terminals, or wholesale distribution centers.*"[1] (*emphasis added*)

---

1 OAR 660-022-0010 contains an additional definition of "Industrial Use" that would further justify characterization of the proposed facility as industrial in nature: ""(4) 'Industrial Use' means the use of land primarily for the manufacture, processing, storage, or wholesale distribution of products, goods, or materials. It does not include commercial uses."

EXHIBIT M

10. The general development policies applicable to rural lands in Marion County provide:

1. All land divisions should be reviewed by Marion County for their compatibility with County goals and policies.

2. "Strip-type" commercial or residential development along roads in rural areas shall be discouraged.

3. Rural industrial, commercial and public uses should be limited primarily to those activities that are best suited to a rural location and are compatible with existing rural developments and agricultural goals and policies.

11. This application does not concern a land division but rather the use of land. General Development policy 1 is not applicable.

12. The Applicant is seeking to relocate its helicopter transport service to the Aurora State Airport. The plan includes constructing a 126,000 square foot building to house its business. This will not be a strip-type commercial or residential development. General development policy 2 is not applicable.

13. The subject property abuts the airport and an airport overlay zone has already been applied to the property. Airports are a public use and the zoning designation for the Aurora Airport is P. It should be noted that the ASA came about in 1943 as the result of WWII, long before any land use planning/zoning was initiated. The application proposes to locate a helicopter transport service adjacent to the airport and change the zoning designation from EFU to P. The area surrounding the airport is zoned EFU with the exception of a small area to the northwest that is zoned AR. Properties to the east, across Airport Road, are all zoned EFU as is property to the south across Keil Road. Those properties are in agricultural use. The surrounding uses have long co-existed successfully with the airport. The uses at the airport are very similar to the proposed uses, both are airport related uses. As such, the proposed use will be compatible with the surrounding uses.

The MCCP agricultural goals and policies discourage the development of non-farm use on agricultural lands and endeavor to keep large tracts of land in agricultural use. The proposed use is not a farm use and, if approved, approximately 27 acres will be taken out of agricultural production. Although the proposed use would take land out of agricultural production, as detailed below, there are reasons under Marion County goals and policies as well as under applicable State Goals and regulations for this exception. The Board finds that the application is consistent with general development policy 3.

The Board reviews the application against the applicable comprehensive plan policies in totality, not as individual criteria that each apply independently to the application.

14. *Rural Industrial Policy #1: Industrial uses in conjunction with farm or forest uses shall be evaluated to determine if they need to be located on resource lands or whether an equally suitable location is available in an urban area or on non-resource lands in a rural area.*

The Board finds this policy is not applicable because the proposed, airport-related industrial use is not in conjunction with farm or forest uses.

15. *Rural Industrial Policy #2: Rural industries should be compatible with existing development and farm or forest uses in the vicinity, should not involve a large number of employees, should not*

EXHIBIT M

require heavy truck traffic through residential areas or on unimproved roads, and should not have the potential to exceed the environmental capacity of the site or require urban services.

The airport related uses proposed by Applicant will be consistent with the development immediately adjacent to the west at the airport. As addressed in the application at length, the proposed development will have little to no impact on farm and forest uses in the vicinity. The subject property is not directly adjacent to any farm and forest uses as the airport lies directly to the west, Keil Road NE and Airport Road NE lie to the south and east, and a religious retreat has been developed to the north. The farm and forest uses in the vicinity will be adequately buffered from the proposed uses located on the subject property either by intervening development or roadways adjacent to the subject property. The facility is proposed to be located on the southerly portion of the subject property, a substantial distance from the religious retreat located to the north.

Unlike a rural industrial use that is entirely surrounded by rural and resource uses, Applicant's facility is a unique rural industrial development in that it will be located immediately adjacent to the Aurora State Airport where a very large number of employees are already located. Up to approximately 70 employees will be on the subject property after complete consolidation. This location as well as the capacity and condition of affected transportation facilities justify the proposal in this case, particularly as conditioned by this approval. The proposal will not require heavy truck traffic through residential areas. The site has the environmental capacity for the proposed use without requiring urban services. The application is consistent with Rural Industrial Policy 2..

16. *Rural Industrial Policy #3: A non-resource related industrial use should not be permitted on resource lands unless an evaluation of the relevant County and State Goals and the feasibility of locating the proposed use in an urban growth boundary or rural non-resource lands show that the proposed site on resource lands is the most suitable.*

The application and this approval contain a thorough evaluation of the relevant county and state goals, as well as an analysis of the feasibility of locating the non-resource related proposed industrial use on non-resource land or within urban growth boundaries. The proposed use must be located at an airport, and this airport has several amenities important to Applicant's use, the combination of which is exclusive to this property, including proximity to a custom vendor located at the Aurora Airport (Metal Innovations, Inc.), proximity to the specially trained human resource pool due to competitors in the vicinity, proximity to the Portland International Airport, and the availability of the access road adjacent to the property for taxiway purposes. Airport-related uses are not normally allowed in urban areas for safety reasons. The facts and analysis contained in the application establish that the proposed airport related uses are most suitably located next to the Aurora State Airport on the subject property. The application is consistent with Rural Industrial Policy 3.

17. *Rural Services Policy #1: The impact on existing services and the potential need for additional facilities should be evaluated when rural development is proposed.*

Under the MCCP, rural service facilities are those services and facilities necessary to provide basic support systems for rural development. Rural development includes farm and forest related development, acreage residential development and rural commercial and industrial uses.

No new service facilities are required with this proposal. The water, septic and stormwater needs will be met on site or by connection to existing facilities at the airport. The transportation facilities and services are already in place and their condition is addressed at length in Public Works staff comments

EXHIBIT M

and the Traffic Impact Analysis (TIA) provided by the Applicant's traffic engineer. The traffic engineer coordinated with County Public Works Staff as well as Oregon Department of Transportation. This approval is conditioned on Applicant's improvement or contribution toward improvements of transportation facilities. The use, as conditioned, is consistent with Rural Services Policy 1.

18. *Rural Services Policy #2: It is the intent of Marion County to maintain the rural character of areas outside of urban growth boundaries by only allowing those uses that do not increase the potential for urban services.*

The city of Aurora's urban growth boundary (UGB) is approximately 1,300 feet from the subject property and there currently are no plans to extend the UGB or urban services to include the subject property. The Board finds that the proposed project does not increase the potential for urban services. The subject property and the immediately adjacent airport have adequate resources to service the water and sewer needs for the proposed use. The subject property is located adjacent to the airport, and the airport has existed for sometime without being connected to urban services. The proposed use will be similar to the airport, both are airport related uses, and will maintain the rural character of the area to the extent possible. This application is consistent with Rural Services Policy 2.

19. *Rural services policy #3: Only those facilities and services that are necessary to accommodate planned rural land uses should be provided unless it can be shown that the proposed service will not encourage development inconsistent with maintaining the rural density and character of the area.*

The predominate feature of the surrounding area is the airport. No new proposed urban services are planned for the proposed development. The proposed use is adjacent to the airport and will be very similar in character to the uses that are already on site. The proposed use will not encourage development that is inconsistent with the already existing uses at the airport and will maintain the rural density and character of the area. The application is consistent with Rural Services Policy 3.

20. *Rural Services Policy #4: The sizing of public or private service facilities shall be based on maintaining the rural character of the area. Systems that cannot be cost effective without exceeding the rural densities specified in this Plan shall not be approved. The County shall coordinate with private utilities to ensure that rural development can be serviced efficiently.*

The service facilities will be almost entirely self-contained on the subject property or connecting to the existing water system at the immediately adjacent airport for fireflow purposes. The proposed use will also be served by a well. The service facilities proposed by Applicant are consistent with services in the area and will help maintain the rural character of the area. Fire and police protection are already provided to the subject property. The Applicant will be required to comply with the applicable fire district regulations. The TIA provided by Applicant is discussed below. The application, as conditioned, is consistent with Rural Services Policy 4.

21. *Air, Rail, Water, Energy, and Pipeline Transportation Policy #1: Airports and airstrips shall be located in areas that are safe for air operations and should be compatible with surrounding uses.*

The proposed use includes a helipad for the Applicant's fleet of helicopters. The use is adjacent to the airport which has successfully existed for over 65 years. Helicopter operations have safely taken place at the airport over the years and have been compatible with other uses at the airport. The county has established an airport overlay zone that restricts development in the area to uses that are compatible with airport uses. The testimony from other airport users as well as evidence of long-standing similar

helicopter use by Applicant's competitor at the airport demonstrate that that the proposed use will be compatible with and complementary to airport uses. The surrounding uses are otherwise agricultural operations, compatibility with which is addressed in detail in discussion of the Goal exceptions below. Because the development at the airport has been low density, the airport is reliant on rural services only. The application is consistent with Air, Rail, Water, Energy, and Pipeline Transportation Policy 1.

22. *Economic Development Goal (a): Provision of increased employment opportunities for all residents of the County.*

The Board finds that securing Applicant's company at this location would significantly advance this Goal and be a benefit for not only the airport, but the city, county, and state as well. The direct benefit from the consolidation of the company in Aurora would mean that there will be an immediate need for 85 additional jobs in the region (though not all onsite), with average salaries ranging from $50,000 to $60,000 per year. Applicant projects an anticipated growth to approximately 160 employees by the 5th year. Currently, Applicant subcontracts approximately $5 million to local Oregon companies and estimates that the number should increase to $8 million within the first year after consolidation of the operation is complete at Aurora. With Applicant reaching $80 million in sales in 2007, and still experiencing a steady rate of growth, Applicant estimates that its sales will reach $110 million in 2010. Not only does this increase the direct employment of more people, but it also increases the amount spent by the company back into the local economy on subcontracts and other goods and services, which incidentally increases other employment opportunities in the county as well.

23. *Economic Development Goal (b): Maintenance of a strong agricultural economy.*

Although the proposal is to take 27.48 acres out of agricultural use, the proposed use will have little effect on the overall agricultural economy in the area. The subject property is below the minimum parcel size of 80 acres in an EFU zone. Testimony from a resident of 70 years in the area confirmed that the subject parcel has never been in extended agricultural production due to poor soil hydration. Applicant provided information from the *Gross Farm Sales and Estimated Acreage Summary* tables from the Oregon State University Extension Service report, "2008 Oregon County and State Agricultural Estimates, Special Report 790-08, revised February 2009." According to the report, there are 156,012 acres of crop land (excluding other types of resource land) in Marion County. On average, the crop land generates approximately $2,954.23 per acre annually (gross farm sales, all crop summary total of $460,896,000 divided by 156,012 acres = $2,954.23/acre). The subject property, could, therefore, generate $81,200 per year total in agricultural production ($2,954.23 X 27 acres = $81,200). The Board finds that in light of the property's historically minimal agricultural production and the relatively minimal loss of agricultural revenue, particularly in light of the economic gains associated with the proposal, the proposal is consistent with Economic Development Goal (b).

24. *Economic Development Goal (d): Diversification of the economic base of communities, and expansion of seasonal employment opportunities to year-round status whenever possible.*

The Applicant's business will bring new jobs to the area. Workers will be needed for the development of the proposed project including the construction of the 126,000 square foot building as well as parking and storage areas. Although not all of the Applicant's employees will be at the site at all times due to the nature of their work, the business will provide approximately 70 new jobs based in this area with the possibility of expanding up to 160 new jobs. The newly created jobs will not be in the agricultural area which is the predominate types of jobs in the surrounding areas and county.

EXHIBIT M

Accordingly, the new jobs will help diversify the economic base of the county. The Board finds that airport uses are unique and opportunities to create jobs within the airport context are rare. This opportunity brings new jobs in this unique sector, does so in a substantial number with high-wage jobs in a manner that supports the economy of other businesses at the airport. This is particularly important with the loss of other employment at the airport such as Artex, the closure of which has resulted in the loss of 154 jobs. The application is consistent with Economic Development Goal (d).

25. *Economic Development Goal (e): Provision of sufficient areas for future industrial land use.*

Though appropriately designated in the P zone, Applicant's use is industrial in nature and provides jobs at industrial wages. The approval of this application advances the county goal of providing both immediate industrial land use and future land use by providing enough land for the full consolidation and expansion of Applicant's operations. The application is consistent with Economic Development Goal (e).

26. *Economic Development Goal (f): Development of a transportation system for the safe and efficient movement of persons and goods for present needs.*

Public airports form an important and integral part of the state and county transportation system. Applicant has provided evidence that the Aurora State Airport, the busiest state-owned airport, needs to expand to improve its capacity and service to existing and potential users. The Board finds that the proposed use will stimulate economy at the airport and maintain if not increase its effectiveness as part of the transportation system. Siting the proposed use at this location utilizes an existing road system currently serving the same use and located relatively close to the Portland International Airport in order to reduce impacts on the state and county's road system. The Board finds that while Applicant's proposed use will increase airport capacity and provide a substantial economic benefit to the county, the nature of Applicant's use minimizes the adverse impacts on air traffic congestion at the airport and vehicle traffic congestion in the surrounding areas. The primary helicopter traffic occurs in two, relatively brief periods of the year. While based out of the airport and the Aurora area, many of the employees spend significant portions of the year away from the site, thereby reducing traffic impacts on county roads. The Board finds this proposal consistent with Economic Development Goal (f).

27. For the reasons discussed above as well as for the reasons demonstrating compliance with criteria for Exceptions to Statewide Planning Goals as discussed below, the Board finds that the proposal is consistent with the applicable Goals and Policies of the Marion County Comprehensive Plan.

EXCEPTIONS TO STATEWIDE PLANNING GOALS

28. Applicant proposed that under OAR 660-012-0065 exceptions to Goals 3, 4, 11, and 14 are not needed. Applicant's position is that its application is an expansion of the airport and relies on OAR 660-012-0065 and *Lentz v. Lane County*, 38 OR LUBA 669 (2000) for that proposition. It is unclear from the OARs, ORS and Applicant's various written statements if the application is technically an expansion of the airport. It appears that the proposed use is outside of the airport boundaries.

Applicant asserts OAR 660-012-0065(3)(n) provide that exceptions to statewide goals are not required for airport expansions. The rule provides in pertinent part:

EXHIBIT M

(1) This rule identifies transportation facilities, services and improvements which may be permitted on rural lands consistent with Goals 3, 4, 11, and 14 without a goal exception.

(3) The following transportation improvements are consistent with Goals 3, 4, 11, and 14 subject to the requirements of this rule:

(n) Expansions or alterations of public use airports that do not permit service to a larger class of airplanes; and . . .

The Board finds that the proposed use is not a transportation improvement to the airport. It is development on private property for the benefit of the property owners. It does not appear that the subject property is within the airport boundaries as defined by and for the purposes of the 1976 Airport Master Plan attached as Exhibit H to Applicant's application. The airport appears to be bounded on the side adjacent to the subject property by a security fence and the subject property is labeled: "This area acceptable for airport related development under private ownership."

The Board finds the *Lentz* case is distinguishable because it concerned a new public use runway and included road realignment as well as an expansion of the airport boundary. The two cities involved, Eugene and Springfield, as well as Lane County all joined together and adopted amendments to the Eugene Airport Master Plan changing the zoning of the Lentz property from AG (Agricultural) to G (Government and Education). There is no indication that the proposed use, consolidation of the Applicant's helicopter transport business, involves any similar transportation improvements to the airport. In any event, the Board finds that the Applicant has satisfied requirements of exceptions to Goals 3 and 14. Those exceptions are discussed and analyzed below.

29. Applicant proposes a reasons exception to goal 3 and 14. The third type of exception requires the county to show other "reasons" why a goal exception is appropriate. Only the portions of the OARs applicable to this application are discussed below.

30. OAR 660-004-0018(4) provides:

(a) When a local government takes an exception under the "Reasons" section of ORS 197.732(1)(c) and OAR 660-004-0020 through 660-004-0022, plan and zone designations must limit the uses, density, public facilities and services, and activities to only those that are justified in the exception;

(b) When a local government changes the types or intensities of uses or public facilities and services within an area approved as a "Reasons" exception, a new "Reasons" exception is required;

This approval includes the imposition of a limited use overlay zone on Applicant's property. Only the following uses are allowed: helicopter uses, services, maintenance, offices, repair, overhauling, and other uses associated with the helicopter business.

31. ORS 197.732(1)(c) provides that a local government may take exception to a goal if the following standards are met:

(A) Reasons justify why the state policy embodied in the applicable goals should not apply;

(B) Areas which do not require a new exception cannot reasonably accommodate the use;

EXHIBIT M

(C) The long term environmental, economic, social and energy consequences resulting from the use at the proposed site with measures designed to reduce adverse impacts are not significantly more adverse than would typically result from the same proposal being located in areas requiring a goal exception other than the proposed site; and

(D) The proposed uses are compatible with other adjacent uses or will be so rendered through measures designed to reduce adverse impacts.

32. These standards are further clarified in the relevant Oregon Administrative Rules:

660-004-0020, Reason Exception Requirements:

(1) If a jurisdiction determines there are reasons consistent with OAR 660-004-0022 to use resource lands for uses not allowed by the applicable Goal or to allow public facilities or services not allowed by the applicable Goal, the justification shall be set forth in the comprehensive plan as an exception.

(2) The four factors in Goal 2, Part II(c) required to be addressed when taking an exception to a Goal are:

(a) Reasons justify why the state policy embodied in the applicable goals should not apply: The exception shall set forth the facts and assumptions used as the basis for determining that a state policy embodied in a goal should not apply to specific properties or situations including the amount of land for the use being planned and why the use requires a location on resource land;

(b) Areas which do not require a new exception cannot reasonably accommodate the use:

(A) The exception shall indicate on a map or otherwise describe the location of possible alternative areas considered for the use, which do not require a new exception. The area for which the exception is taken shall be identified;

(B) To show why the particular site is justified, it is necessary to discuss why other areas which do not require a new exception cannot reasonably accommodate the proposed use. Economic factors can be considered along with other relevant factors in determining that the use cannot reasonably be accommodated in other areas. Under the alternative factor the following questions shall be addressed:

(i) Can the proposed use be reasonably accommodated on nonresource land that would not require an exception, including increasing the density of uses on nonresource land? If not, why not?

(ii) Can the proposed use be reasonably accommodated on resource land that is already irrevocably committed to nonresource uses, not allowed by the applicable Goal, including resource land in existing rural centers, or by increasing the density of uses on committed lands? If not, why not?

EXHIBIT M

(iii) Can the proposed use be reasonably accommodated inside an urban growth boundary? If not, why not?

(iv) Can the proposed use be reasonably accommodated without the provision of a proposed public facility or service? If not, why not?

(C) This alternative areas standard can be met by a broad review of similar types of areas rather than a review of specific alternative sites. Initially, a local government adopting an exception need assess only whether those similar types of areas in the vicinity could not reasonably accommodate the proposed use. Site specific comparisons are not required of a local government taking an exception, unless another party to the local proceeding can describe why there are specific sites that can more reasonably accommodate the proposed use. A detailed evaluation of specific alternative sites is thus not required unless such sites are specifically described with facts to support the assertion that the sites are more reasonable by another party during the local exceptions proceeding.

(c) The long-term environmental, economic, social and energy consequences resulting from the use at the proposed site with measures designed to reduce adverse impacts are not significantly more adverse than would typically result from the same proposal being located in other areas requiring a Goal exception. The exception shall describe the characteristics of each alternative areas considered by the jurisdiction for which an exception might be taken, the typical advantages and disadvantages of using the area for a use not allowed by the Goal, and the typical positive and negative consequences resulting from the use at the proposed site with measures designed to reduce adverse impacts. A detailed evaluation of specific alternative sites is not required unless such sites are specifically described with facts to support the assertion that the sites have significantly fewer adverse impacts during the local exceptions proceeding. The exception shall include the reasons why the consequences of the use at the chosen site are not significantly more adverse than would typically result from the same proposal being located in areas requiring a goal exception other than the proposed site. Such reasons shall include, but are not limited to, the facts used to determine which resource land is least productive; the ability to sustain resource uses near the proposed use; and the long-term economic impact on the general area caused by irreversible removal of the land from the resource base. Other possible impacts include the effects of the proposed use on the water table, on the costs of improving roads and on the costs to special service districts;

(d) The proposed uses are compatible with other adjacent uses or will be so rendered through measures designed to reduce adverse impacts. The exception shall describe how the proposed use will be rendered compatible with adjacent land uses. The exception shall demonstrate that the proposed use is situated in such a manner as to be compatible with surrounding natural resources and resource management or production practices. "Compatible" is not intended as an absolute term meaning no interference or adverse impacts of any type with adjacent uses.

EXHIBIT M

33. OAR 660-004-0022 sets out what "reasons" are acceptable under OAR 660-004-0020(2)(a). It provides in pertinent part:

> An exception Under Goal 2, Part II(c) can be taken for any use not allowed by the applicable goal(s). The types of reasons that may or may not be used to justify certain types of uses not allowed on resource lands are set forth in the following sections of this rule:
>
> (1) For uses not specifically provided for in subsequent sections of this rule or in OAR 660-012-0070 or chapter 660, division 14, the reasons shall justify why the state policy embodied in the applicable goals should not apply. Such reasons include but are not limited to the following:
>
> (a) There is a demonstrated need for the proposed use or activity, based on one or more of the requirements of Goals 3 to 19; and either
>
> (b) A resource upon which the proposed use or activity is dependent can be reasonably obtained only at the proposed exception site and the use or activity requires a location near the resource. An exception based on this subsection must include an analysis of the market area to be served by the proposed use or activity. That analysis must demonstrate that the proposed exception site is the only one within that market area at which the resource depended upon can reasonably be obtained; or
>
> (c) The proposed use or activity has special features or qualities that necessitate its location on or near the proposed exception site.

As the findings above discuss, the Board finds the use to be an airport related use industrial in nature. Because Applicant's use is industrial in nature, it is specifically provided for in a subsequent section of OAR 660-004-0022. Specifically, OAR 660-004-0022(3) provides that for the siting of industrial development on resource land outside an urban growth boundary, appropriate reasons and facts include, but are not limited to, the following:

> (a) The use is significantly dependent upon a unique resource located on agricultural or forest land. Examples of such resources and resource sites include geothermal wells, mineral or aggregate deposits, water reservoirs, natural features, or river or ocean ports; or
>
> (b) The use cannot be located inside an urban growth boundary due to impacts that are hazardous or incompatible in densely populated areas; or
>
> (c) The use would have a significant comparative advantage due to its location (e.g., *near existing industrial activity*, an energy facility, or products available from other rural activities), which would benefit the county economy and cause only minimal loss of productive resource lands. Reasons for such a decision should include a discussion of the lost resource productivity and values in relation to the county's gain from the industrial use, and the specific transportation and resource advantages which support the decision.

EXHIBIT M

Goal 3 Exception

34. The purpose of Goal 3 is to preserve and maintain agricultural lands for farm use, consistent with existing and future needs for agricultural and forest products as well as open spaces. The Applicant's proposed development is to establish a helicopter business on EFU zoned land adjacent to the airport. The proposed use is not consistent with the goal and an exception is required.

35. The proposed use is not dependent upon a unique resource located on agricultural land. Accordingly OAR 660-004-0022(3)(a) is not applicable. If subsection (a) is not applicable, then an analysis may be done under subsections (b) or (c).

36. OAR 660-004-0022(3)(c) is applicable to the proposed use. The Board hereby incorporates findings below regarding Goal 3 as to the comparative advantage of this property due to its location, not the least of which is it being immediately adjacent to an existing industrial activity: the Aurora Airport, including one of Applicant's primary competitors at the same airport. That fact alone severely limits the number of locations suitable for Applicant's proposed use. Additional, significant comparative advantages are this property's size, proximity to critical and unique suppliers and service providers, proximity to sufficiently skilled workforce, proximity to Portland International Airport, potential access to through the fence incentives identified for this airport, the access easement serving this property to the airport runway, and the fact that the Applicant owns the property outright, which is a significant factor for its relocation from Corvallis where it has determined that leasing is no longer an option for their operations.

The Applicant is proposing a 126,000 square foot building with accompanying parking and storage space for its helicopters. The helicopters used by the Applicant are older helicopters, built in the 60's and 70's, and are no longer in production. When possible, the Applicant buys the older helicopters for parts and stores the helicopters on site. Testimony at the hearing demonstrated the size of the rotor blades, which are manufactured and repaired at Metal Innovations in the airport near the subject property. Some of the helicopters are quite large, 80 feet, with the rotor blades alone being 40 feet in length. One of the reasons the Applicant is moving from its current location is lack of storage space. Currently some of the helicopters are stored outside where the weather corrodes the helicopters and parts. Because of the limited space at its current location, the Applicant's business is spread out at several locations in the Willamette Valley.

The airport is also home to a major vendor of the Applicant, Metal Innovations, and the vendor is the only vendor of its kind in the world. The airport is one of three rural airports in the state that was identified as a pilot site for the "through the fence" program, which allows access to the airport runway for airport related businesses located within the airport boundary. Concerns were raised by DLCD that the Applicant may be relying too heavily on this program as justification for a goal exception because the program can be applied only after the land use actions have been approved. The Board finds that while Applicant cannot rely solely on the program as justification for this application, the program is still a factor that should be considered.

The subject property is also bordered on two sides by public roads, Keil Road to the south and Airport Road to the east, which buffers it from neighboring agricultural activity. Immediately to the west and further to the north is the airport. Because of its location with respect two of Applicant's competitors (Columbia and Evergreen), the area of the airport has attracted a specialized work force of helicopter mechanics and other specialized workers who provide support for helicopters. The Board finds that

EXHIBIT M

these attributes of this property and the Aurora State Airport represent significant comparative advantages for Applicant's industrial use.

In addition, the Board finds that the economic gain to the county associated with the proposed use far exceeds the relatively minimal loss of resource land and revenue generated thereby. Marion County contains 156,012 acres of crop land alone (excluding other types of resource land such as forest land and livestock land. On average, that crop land generates $2,954.23 per acre. Accordingly the proposed site could generate approximately $81,200 per year if left in resource use. Such an estimate may be generous in light of testimony received at the hearing indicating that it has not historically been farmed for any extended periods of time. The property also generates minimal property tax revenue due to its special assessment for farm-deferral. The data is from *Gross Farm Sales* and *Estimated Acreage Summary* tables of the Oregon State University Extension Service report, "2008 Oregon County and State Agricultural Estimates, Special Report 790-08, revised February 2009."

Conversely, the Applicant's proposed use will generate sufficient revenue for 85 high-wage jobs (an estimated 160 jobs in 5 years with anticipated expansion), construction jobs for the installation of the $19 million facility, an estimated $5 million annually in outsourcing to local service providers and suppliers (an estimated $8 million annually with anticipated expansion in the next 5 years), and approximately $150,000 annually in property tax revenue to the county. Applicant's payroll is $10 to $12 million annually. In addition, construction of the $19 million facility will generate a substantial number of construction jobs. This 27 acres is far more productive for the county's and Oregon's economy than it would be in continued resource use.

Opponent testimony suggested that Applicant's use does not need access or to be adjacent to the Aurora Airport. The Board disagrees. The Board finds that a significant factor in Applicant's purchase of the subject property was the existence of a taxiway easement from the property to the airport runway. Applicant's site plan manifests this with the taxiway from the new facility to the airport property. Weather conditions, air traffic congestion, and other unique circumstances will necessitate HTS helicopters' occasional use of the airport runway for arrival or departure by use of tugging to and from the proposed facility. The facility also relies on the ability of fixed-wing aircraft, both of HTS and those of vendors, suppliers, and independent contractors, to directly access the Applicant's facility, particularly with heavy parts delivery to and from the facility. Applicant's facility, because Applicant outsources the majority of its service and product needs, also relies upon close proximity to such services, particularly key vendors such as Metal Innovations, Applicant's competitor, and Columbia Helicopters (nondestructive stress testing facility), as well as aviation fueling stations, and charter flights for personnel and parts. In fact, as testified by a former employee of Columbia Helicopters, the Applicant's substantial outsourcing is what allows it to operate without the impacts of substantially higher numbers of employees. The efficiencies gained by close proximity to Metal Innovations, an exclusive vendor for the repair and manufacture of Applicant's specialized rotor blades, is one of the primary purposes for Applicant's relocation to the Aurora Airport. The Board finds that these are compelling reasons for Applicant's facility being adjacent to the Aurora Airport on this property.

In light of the fact that this property is designated as being acceptable for future airport expansion in the airport's Master Plan, and that the proposed use has such relatively low impact on the surrounding uses, the reasons are compelling for the property to be used for Applicant's purpose. For these reasons, the Board finds the application satisfies OAR 660-004-0022(3)(c).

EXHIBIT M

37. Alternate Analysis Under OAR 660-004-0022(1)

In light of the applicability of OAR 660-004-0022(3), the Board finds that Applicant need not show a "demonstrated need" under OAR 660-004-0022(1) because the use is an industrial use. However, the Applicant also provided information demonstrating compliance with OAR 660-004-0022(1) in the event Applicant's use was deemed not to be an industrial. The Board agrees with Applicant that, in the event the use was deemed to not be industrial, the application satisfies OAR 660-004-0022(1) for the reasons below. OAR 660-004-0022(1) provides:

(1) For uses not specifically provided for in subsequent sections of this rule or in OAR 660-012-0070 or chapter 660, division 14, the reasons shall justify why the state policy embodied in the applicable goals should not apply. Such reasons include but are not limited to the following:

(a) There is a demonstrated need for the proposed use or activity, based on one or more of the requirements of Goals 3 to 19; and either

(b) A resource upon which the proposed use or activity is dependent can be reasonably obtained only at the proposed exception site and the use or activity requires a location near the resource. An exception based on this subsection must include an analysis of the market area to be served by the proposed use or activity. That analysis must demonstrate that the proposed exception site is the only one within that market area at which the resource depended upon can reasonably be obtained; or

(c) The proposed use or activity has special features or qualities that necessitate its location on or near the proposed exception site.

There is a demonstrated need for the proposed use based on Goals 9 and 12. Following is an analysis of both goals in relation to OAR 660-004-0022(1).

1. **Goal 12.** Statewide Planning Goal 12 requires the provision and encouragement of a safe, convenient, and economic transportation system. Goal 12, Airport Planning, is implemented by OAR 660, Division 13, "Airport Planning.". Division 13 also implements ORS 836.600 through 836.630 relating to local government airport regulation.[2]

The purpose statement of Division 13 indicates that "[t]he policy of the State of Oregon is to encourage and support the continued operation and vitality of Oregon's airports. The rules are intended to promote a convenient and economic system of airports in the state and for land use planning to reduce risks to aircraft operations and nearby land uses." OAR 660-013-0010(1).

Division 13 requires that the county "shall adopt land use regulations to carry out the requirements of this division, or applicable requirements of ORS 836.608, *consistent with the applicable elements of the adopted state ASP* and applicable statewide planning requirements. OAR 660-013-0050 (*emphasis added*).

In addition, the county's "land use regulations for areas within the airport boundary of non-towered

2 See Purpose Statement, OAR 660-013-0010(1): "This division implements ORS 836.600 through 836.630 and Statewide planning Goal 12 (Transportation)." Compliance with OAR 660, Division 13 is deemed to satisfy requirements of Statewide Planning Goal 12 and OAR 660, Division 12 related Airport Planning. See OAR 660-013-0160(3).

EXHIBIT M

airports identified in ORS 836.610(1))" (e.g. Aurora Airport) must authorize, among other uses:

Law Enforcement and *Firefighting Activities, including aircraft and ground based activities, facilities, and accessory structures necessary to support federal, state or local law enforcement and land management agencies engaged in* law enforcement and *firefighting activities. These activities include transport of personnel, aerial observation and transport of equipment, water, fire retardant and supplies.*

OAR 660-013-0100(3) (*emphasis added*). The Applicant's proposed use is for a facility dedicated almost exclusively to firefighting activities as defined above in that its purpose is the provision of firefighting services for a federal agency, the United Stated Forest Service. To the extent this property is not deemed within the airport boundary, the county has failed to provide adequate land on which firefighting activities are authorized.

Lastly, the county's comprehensive plan indicates that "[f]or specifics related to the Aurora State Airport and the Salem Municipal Airport, the respective Master Plans for these airports should be consulted." MCCP, Chapter IIE, Transportation Element, p. 9.

The record includes the county-adopted Aurora State Airport Master Plan (See Exhibit G in application, hereinafter "Master Plan") and the most recent data available and adopted by the Oregon Department of Aviation as part of the Department's Aviation System Plan pursuant to Division 13. Since 1976, expansion of the airport has been designated to occur *east* of the airport in exactly the area in which this property sits (See p. 67 of Master Plan and accompanying "Airport Layout Plan," Figure 23). Numerous documents in the Master Plan relating to zoning and use of the subject property identify this property and the area around it as "ACCEPTABLE FOR AIRPORT RELATED DEVELOPMENT UNDER PRIVATE OWNERSHIP," including the Airport Layout Plan (Figure 23), the Terminal Area Plan (Figure 25), the Land Use Plan (Figure 28), the Recommended Zoning Plan (Figure 29), and the Development Staging Plan (Figure 30).

The forecasted need for this area to become part of the airport has proven accurate. The current demand well exceeds the demand (and capacity) forecasted by the 1976 Master Plan. The demand is detailed with the most-recent data provided in the 2000 Master Plan Update and the Oregon Department of Aviation 2007 Aviation Plan. In short, while the 1976 Master Plan forecasted needs only as far as when 248 based aircraft would use the airport, the airport had 387 based aircraft as of 2005 with a predicted 498 based aircraft by 2025. To this day, the Airport Layout Plan for the Aurora State Airport identifies this property as acceptable for airport development under private ownership. Lastly, the Master Plan recommends that Marion County work with the State "to develop zoning changes on and near the airport as recommended by the Master Plan." Master Plan, p. 11.

In summary, the 1976 Master Plan, based on demands through a 1995 planning horizon, anticipated this property to be developed for airport uses. Now, in the current planning horizon, demand already exceeds the 1995 forecast by 56% (and will double by the end of the period). Only roughly 4.85 acres of vacant land remain for development at the airport (see Supplemental Written Statement). Yet, the subject property remains undeveloped and unzoned for airport purposes.

Whether pursuant to its obligations under its adopted Master Plan under Goal 12, or pursuant to the obligations imposed directly by Goal 12 and its implementing regulations under OAR 660, Division 13 and ORS 836.600 through 836.630, the county's failure to grant the proposed Goal exception would necessarily mean its failure to accomplish its obligations under Goal 12. Therefore, for the reasons set

EXHIBIT M

forth above, there is a demonstrated need for the proposed use based on one or more of the goals in satisfaction of OAR 660-004-0022(1)(a).

2. **Goal 9.** Closely related to the county's obligations under Goal 12 are its obligations under Goal 9 to "provide adequate opportunities through the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon's citizens." In addition, not granting the proposed application would also represent failure to accomplish the county's economic goals under its Comprehensive Plan.

The economic impacts associated with the vitality of state airports are statutorily acknowledged in ORS 836.600, which provides "[i]n recognition of the importance of the network of airports *to the economy of the state* and the safety and recreation of its citizens, the policy of the State of Oregon is to encourage and support the continued operation and vitality of Oregon's airports." (*emphasis added*). The economic benefits of this proposed use to both the County and the State are very substantial. They are described at length in the Applicant's Written Statement (e.g., pp. 13-14, 16-17, 21-22) and Supplemental Written Statement (p. 2 and enclosed flier from Helicopter Transport Services).

As demonstrated above with respect to Goal 12, there is currently *inadequate* opportunity at the Aurora Airport. This airport is the only airport within the county's jurisdiction. Clearly, both as acknowledged by statute and as evidenced with the data provided, airports provide a tremendous benefit to and are essential components to a diverse economy. The county's failure to adequately provide appropriately zoned land for the demand at that airport would constitute failure to provide "adequate opportunities" for a "variety of economic activities." This application provides a vehicle to provide such opportunities maintaining the variety sought by Goal 9. Failure to grant the exception would constitute failure to comply with the county's obligations under Goal 9 and its associated Comprehensive Plan policies.

B. Applicant's use relies on Aurora Airport resources (OAR 660-004-0022(1)(b)) and has special features and qualities necessitating its location at the subject property (OAR 660-004-0022(1)(c)).

These findings address why the proposed use must be located adjacent not only to an airport, but the Aurora airport specifically. The airport contains the airstrip, fueling, and other essential operational, maintenance, and repair services essential to Applicant's use. In addition, it is located in the heart of the human resource pool trained for Applicant's helicopter operations, and it is located strategically close to the Portland International Airport. Lastly, although not a justification in and of itself for the proposed zone change, the Aurora Airport is one of only a few airports in the State that has through-the-fence opportunities, which best accommodate Applicant's use.

The market area served by the Applicant's firefighting helicopter services spans multiple states in conjunction with the United States Forest Service's firefighting operations. The only other airport in the County potentially large enough for Applicant's use is the Salem Airport. However, Applicant's helicopter use is less compatible with the surrounding uses at Salem's urban airport, and Salem's airport and vicinity do not provide the economic, energy, and environmental advantages associated with the Aurora location and its proximity to Portland International Airport. This reliance on the Aurora Airport as a critical resource satisfies OAR 660-004-0022(1)(b).

Applicant's reliance on these fundamental features, including the airport's landing strip, refueling proximity, and unique service providers, also constitute satisfaction, if needed, of OAR 660-004-

EXHIBIT M

0022(1)(c). In addition to the airport as a resource, the size of the property itself is sufficient to accommodate Applicant's current and future operational requirements, including the space needed to provide adequate surface protections for the approach and departure of the helicopters as well as the vast storage and maintenance space associated with its operations. As stated by Applicant's engineer at the hearing, these large helicopters do not take off and land straight up and down. They require horizontal clearance as well.

For all the reasons and evidence set forth above, Applicant's proposal complies with OAR 660-004-0022(1), if applicable.

38. OAR 660-004-0020 sets forth four factors under Goal 2, Part II(c) that are required to be addressed when taking an exception to a goal. The factors are set out above and below with findings specific to each following.

(a) Reasons justify why the state policy embodied in the goals should not apply.

The reasons justifying inapplicability of Goals 3 and 4 are established above as set forth in the Board's findings under OAR 660-004-0022.

In addition, with respect to the size of the property to be rezoned, after review of Applicant's site plan and current and long-range expansion needs, the Board finds that Applicant requires the full 27.48 acres. The record shows that Applicant requires at least 15 acres for the initial facility just to consolidate its United States operations and will require more for planned expansion.

The Applicant is currently leasing multiple different, separate areas and hangers at the Corvallis airport and in other cities near Corvallis due to insufficient space for its use. Applicant's existing Corvallis operations alone require 63,000 square feet of indoor roofed space. The remaining operations across the United States total an additional 23,000 square feet of indoor hanger and office space. In addition, Applicant leases a four-acre, outdoor truck yard for additional storage of helicopter parts. The need for storage is ever expanding as the company searches for and purchases parts for its older helicopters, for which parts are no longer manufactured. Applicant purchases older helicopters around the country simply for their parts in the event of future need. The outdoor storage causes corrosion of the parts, and the company's future expansion will provide additional, large areas of indoor storage and line maintenance for the additional helicopters. In the months between the hearings officer hearing and the Board's hearing, Applicant purchased two large, heavy-lift Sikorsky helicopters and as of the Board hearing was in the process of purchasing three more.

To provide for Applicant's 126,000 square foot facility, its outdoor apron, parking areas, truck storage areas (the company owns multiple fuel tankers that follow the helicopters while out for the summer on firefighting service; the helicopters burn up to 525 gallons of fuel per hour of flight), septic system and drainfield, the taxi way, the helipad and sufficient approach for the helipad, construction of the initial facility will require approximately 15 acres. After Applicant's consolidation, Applicant's foreseeable growth will require additional covered space for additional storage and maintenance shops.

The site map shows the approximate location and size of Applicant's anticipated future expansion. Construction of the expansion will require Applicant to obtain an additional conditional use permit by submitting a detailed site plan of the expansion facilities. At that time, the county and public will review the expansion and its impacts, and the county may impose conditions to mitigate those impacts.

EXHIBIT M

The Board finds that Applicant's request for the re-designation of the entire 27 acres is also consistent with similar users at the airport and necessary for safety. Applicant's primary competitor, Columbia Helicopters, operates on a site of 24 acres on the north end of the airport. In addition, the Federal Aviation Administration discourages crop lands on airport property for the safety of flight operations. Mr. Faegre, who has engineered and designed many of the facilities at the Aurora State Airport, recommends against using any of the proposed parcel for agricultural purposes. The Board finds such safety concerns substantiated by the January 13, 2010 *Oregonian* article provided at the hearing recounting the deaths of 8 people in a Sikorsky helicopter like Applicant's when the helicopter struck a hawk. Accordingly, as a practical matter, given the necessary configuration of the site for Applicant's use, no part of the subject property can remain viable for agricultural purposes. The Applicant has indicated that because of the reality of such safety concerns, the Applicant will not allow the property's use for agricultural purposes. Accordingly, the Board finds that regardless of whether buildings are constructed immediately on the area designated for Applicant's eventual expansion that area will nevertheless be for airport use by virtue of safety precautions preventing any agricultural activity to occur on that portion of the property. Furthermore, the record shows, and the Board finds that, Applicant's ability to expand is critical to the success of the company.

For these reasons, the Board finds that re-zoning the entire 27 acres is consistent with applicable criteria for the Goal exceptions.

(b) "Areas which do not require a new exception cannot reasonably accommodate the use":

The property adjacent to the Aurora State Airport was selected for this development by the Applicant because it features a unique combination of attributes not found on any other property in the region. Being situated adjacent to an airport is vital to Applicant's business. This eliminates a majority of the potential property in the applicable vicinity, and the county as a whole. In addition to benefitting from the use of an adjacent airport, Applicant also provides services that are a direct benefit to other businesses already located at airports. This concentration of potential users and customers cannot be found except at an airport facility. It is most efficient from both the aviation supplier and customer's perspective to have these services located nearby each other and adjacent to an airport. More importantly, the Applicant requires proximate access to airport facilities for the dispatch of its fleet of helicopters as well as the helicopters' return for maintenance and repair.

Proximity to the Aurora State Airport specifically is particularly important. This specific site offers several unique amenities that cannot be duplicated by any city, rural community, or airport in the state. The Aurora airport is the location of the supplier, repair service provider, and engineer of the Applicant's specially designed tail rotor blades, Metal Innovations, Inc. Metal Innovations, Inc. is the only company in the world that supplies this product and service for the Applicant. This is not only important for operations efficiency, but also for reducing energy and transportation costs associated with shuttling parts to and from Metal Innovations, Inc.

In addition, there are significant strategic advantages in being located near the Applicant's two competitors. Columbia Helicopters, Inc. is located within the Aurora Airport, and Evergreen Helicopters, Inc. is located at the McMinnville Airport. Included in those advantages is proximity to the human resource pool of specially trained mechanics that has the expertise necessary to perform the service and repairs needed at the Applicant's proposed facility. The center of that pool is in the Aurora area because of the presence of the Applicant's two competitors.

EXHIBIT M

In addition, there is an airport access road that abuts the subject property's western border. Applicant also owns a 100-foot easement across the south end of the airport specifically granted for purposes of gaining access to taxiways and the runway. Because a "Through the Fence" program has been established at this airport, Applicant will be eligible to use this easement in conjunction with the ability to access the airport facilities. The "Through the Fence" program, in its newly enacted form, is available only at three Oregon airports at this time. Along with the Aurora State Airport, the Scappoose Industrial Airpark and the Baker City Municipal Airport are eligible to participate in this program. However, only the Aurora State Airport can meet the Applicant's needs: It is the only airport in the state with the strategic and efficiency advantages of proximity to its specialty rotor blade vendor and its competitors (i.e. skilled labor force), it is proximately located to the Portland International Airport (key for transportation of parts and employees), and it has the "Through the Fence" capability.

The largest concentration of industrial land is typically found within city limits, in urban environments. This is the land that would be immediately ready to accept Applicant's use, and would not require any exceptions. However, the proposed uses on the property are not compatible with most uses located inside city limits in a traditional urban setting, as there are certain noise and safety concerns that are typical for an airport environment, but which may not be compatible with certain residential, commercial, and even some industrial developments.

The Applicant provided a detailed analysis of the areas at the airport not requiring an exception. It reveals that there is no property in the airport's boundary that can accommodate the Applicant's proposed use. The Applicant is consolidating its United States operations at its Aurora property. Its operations require large operating and storage areas immediately and substantially more in anticipated expansion.

The Applicant is currently leasing multiple different, separate areas and hangers at the Corvallis airport and even in other cities near Corvallis due to insufficient space for its needs. Applicant's existing Corvallis operations alone require 63,000 square feet of indoor roofed space. The remaining operations across the United States total an additional 23,000 square feet of indoor hanger and office space. In addition, Applicant leases a four-acre, outdoor truck yard for additional storage of helicopter parts. The need for storage expands as the company purchases parts for its older helicopters, for which parts are no longer manufactured. Applicant purchases older helicopters around the country simply for their parts in the event of future need. The outdoor storage causes corrosion of the parts, and the company's future expansion will provide additional, large areas of indoor or covered storage.

To provide for Applicant's 126,000 square foot facility, its outdoor apron, parking areas, truck storage areas (the company owns multiple fuel tankers that follow the helicopters while out for the summer on firefighting service; the helicopters burn up to 525 gallons of fuel per hour of flight), septic system and drainfield, the taxi way, the helipad and sufficient approach for the helipad, stage 1 of the new facility will require approximately 15 acres. This facility is intended primarily to house corporate offices and line maintenance facilities for the winter overhaul of the helicopters when returned from firefighting service in the late fall. Additional storage will continue to be maintained offsite until expansion occurs, which will primarily house additional storage and shops.

The site map shows the approximate location and size of shops and storage areas in future expansion. A separate conditional use permit application with a detailed site plan will be required when Applicant's expansion takes place.

EXHIBIT M

Because there are no properties within the airport large enough for Applicant's proposed use, any properties other than Applicant's would require crossing a state highway or county road and further encroaching on resource land to find properties large enough to accommodate Applicant's use. The facility's taxiway cannot cross public roads. In addition, any resource-land properties would likewise require reasons exceptions, and would be less compatible with resource lands than Applicant's property. Applicant's property is immediately adjacent to the existing airport facilities and buffered from surrounding agricultural uses by Airport Road and Keil Road.

The Board finds that Applicant's necessity of owning the property for its new facility is valid justification for its site selection. The economic realities of Applicant's proposed facility require its ownership of the property. Some testimony at the hearing suggested that properties available for lease should be viably considered for Applicant's use. The Applicant states that leasing is not an option, and the Board finds Applicant's position to be valid. Applicant is investing $20,000,000 into this facility's initial construction alone. The Board agrees that with an investment of this size, no prudent business would move forward without complete control of its property and the knowledge that it will permanently retain its investment (i.e. not risk losing it at the conclusion of a lease). The Board finds that such an investment in ownership of the property is a sign of Applicant's commitment to longevity at this location, as opposed to other companies that have merely leased property and are now abandoning the airport. The Board finds such an economic consideration requiring property ownership as an appropriate factor to be considered in this application. The Board finds the proposed facility to be unique and large, and a significant economic opportunity that requires very specific parameters, including property ownership. OAR 660-004-0020(2)(b)(B) specifically provides that "Economic factors can be considered along with other relevant factors in determining that the use cannot reasonably be accommodated in other areas."

The requirements of this particular use require a location in close proximity to the airport. The subject property, given the reasons noted above, is uniquely suited for this use. The airport is currently surrounded by resource lands and there are no appropriately zoned areas available adjacent to the airport which are not developed or are being developed which can reasonably accommodate aviation-related activity. There are no areas which do not require an exception that could reasonably accommodate the use. For the reasons stated, there is no other airport that can meet Applicant's needs. However, even assuming otherwise, any other lands for purchase adjacent to public-use airports in Marion County, or the State of Oregon for that matter, would likely require the same exception that is required in this application. For these reasons, there are no properties not requiring an exception that can reasonably accommodate Applicant's use. Even those properties that would require an exception cannot accommodate Applicant's use in light of their inability to provide the significant comparative advantages of this location and their incompatibility with surrounding agricultural uses. This criterion is satisfied.

(c) *The long-term environmental, economic, social and energy consequences resulting from the use at the proposed site with measures designed to reduce adverse impacts are not significantly more adverse than would typically result from the same proposal being located in other areas requiring a Goal exception.*

As stated above, the location of this project adjacent to the airport is an essential component of the proposed development. All of the possible alternative sites adjacent to airports, which would be suitable for siting an aviation-related activity, are also zoned EFU in the vicinity. Therefore, there are no adverse impacts that can be said to be significantly more adverse that would typically result from the same proposal being located in other areas requiring a Goal exception. Attempting to site the

EXHIBIT M

proposed project on any other piece of land would likely have even more significant adverse consequences. The only other tract of land adjacent to the airport that is not already in airport use is the tract of land directly adjacent to the north of the proposed use. This property is not vacant; it is actively used as a religious retreat facility. The retreat property would also require an exception, would actually have no buffer from agricultural land to the south, and is financially infeasible since the Applicant already owns the property subject to this application. In addition, in order to develop the retreat property, besides the costly relocation of the religious retreat and removal of the associated structures, a large amount of the timber that is currently on the land would likely have to be removed. This is a significant environmental consequence that would not be necessary were the development located directly to the south on the subject property.

Even as far back as 1976, Marion County recognized that the subject property was fit to be developed for airport expansion under private ownership. In the 2007 Airport Layout Plan (ALP), this property is the only property acknowledged as "ACCEPTABLE FOR AIRPORT-RELATED DEVELOPMENT UNDER PRIVATE OWNERSHIP." The proposed uses on the subject property will be consistent with those that currently exist at the airport. The existing airport uses have been compatible with the surrounding resource uses for decades. There is no indication that an expansion of these uses would cause an incompatibility. In fact, the new development will have better buffers from resource uses than the current airport development has. The proposed use is well situated away from residential areas, but also buffered by roads from agricultural uses. As described and conditioned, it will not interfere with resource use, as many other uses might. Additionally, there are certain noise and safety concerns associated with this use, which make it more compatible with rural areas than it would otherwise be in more densely populated areas.

The Board finds that the proposed use will not cause a significant increase in the amount of automobile traffic. The impact would be no more adverse than if this use were sited on another property requiring a goal exception. As identified in the Traffic Impact Analysis and as conditioned, the surrounding roads will be adequate to accommodate the increase in vehicle trips caused by the proposed development. As the 2000 Airport Master Plan Update concludes, the existing roads are adequate to handle the increase in the proposed development. Being located adjacent to a major collector and in close proximity to major transportation and shipping routes, such as Interstate 5 and Oregon Highway 51, is a benefit that is not available on other rural land that would be suitable for this use. The property is also benefitted by the existing easement created specifically to provide direct access to the airport from this site without burdening public roads. In addition, the applicable airport overlay zone limits certain development standards applicable to the property. This will help ensure that the potential for larger, heavy traffic producing development on the property remains less than could be achieved from the same proposal being located on other lands requiring a Goal exception.

The proximity to the Aurora Airport, and various urban centers, is another reason why this property was purchased by Applicant. Applicant currently travels from the Corvallis Municipal Airport to the Portland International Airport (PDX) for shipments and personnel dispatches. The move to Aurora will cut this transportation distance and time significantly, by approximately 130 miles and 2.5 hours each round trip to and from PDX. This reduction in distance reduces energy consumption and environmental impacts, as well as the operations costs to the Applicant.

Economically, the expansion of the airport is positive for the City of Aurora, Marion County, and the state of Oregon. In the city of Aurora's comprehensive plan, the City's adopted assumptions forecast an 86% increase in population over the planning period (2000-2020). According to the Portland State University Population Research Center, as of July 1, 2007 Marion County was estimated to contain

EXHIBIT M

311,070 residents in 2005, up 9.2 percent from the 284,834 residents the census data recorded in 2000. This region is currently growing at nearly the same pace as the state as a whole, which experienced 9.5 percent growth over that same period according to the same data. The City acknowledges that the vicinity around the airport has the potential for significant economic/commercial development. *See* City of Aurora Comprehensive Plan, Pages 22 and 59. Increased development will have a positive economic impact upon the city. *See* City of Aurora Comprehensive Plan, Page 22. Applicant's generation of new jobs will also have a secondary effect of increased patronage of local businesses. The 2007 Oregon Aviation Plan analyzed the economic impact that the airport had on regional economy. In 2005, 2,403 jobs were directly related to both on and off airport related impacts, providing $52,347,000 in local wages. *See* Oregon Aviation Plan 2007, Appendix E, Page 6. The sum of on-airport economic activities, off-airport spending by visitors who arrive by air, and spin-off impacts led to local business sales of $134,827,000. This impact is proportionate to the impact that public-use airports have on the state as a whole. Oregon public-use airports, including airport tenants, directly employ 7,000 people for aviation related activities and expend $259,000,000 in wages. *See* Oregon Aviation Plan 2007, Aurora State- Individual Airport Report, Page 32. These employees and tenants earned an average annual salary of $36,000 per year for aviation activities and $35,000 per worker, when including non-aviation jobs.

OAR 660-013-0010 sets forth the policy of the state of Oregon regarding airport planning. "The State is to encourage and support the continued operation and vitality of Oregon's airports... Ensuring the vitality and continued operation of Oregon's system of airports is linked to the vitality of the local economy where the airports are located." Expansion of the airport to include Applicant's business would be positive for the continued overall growth and vitality of Oregon's aviation system, and a tremendous advantage for the region to secure a productive and viable business. As discussed above, Applicant is a multimillion dollar producer. Applicant will provide both sales and substantial, high-wage jobs to the region. The consolidation of the company in Aurora would mean that there will be an immediate need for 85 additional jobs in the region, with average salaries ranging from $50,000 to $60,000 per year. The Applicant forecasts steady growth, with a projected need of approximately 160 employees by the 5th year.

Applicant's proposed use can only be located at or adjacent to an airport which will allow access to its facilities. This limits the alternative sites which are appropriate to consider for the proposed use. The land adjacent to the Aurora State Airport is ideal for the proposed use given its location adjacent to the airport and its proximity to nearby urban centers. Additionally, the land has adequate resources and capacity to support the septic and water needs of the use, while also being adjacent to roadway infrastructure that can handle the increase in anticipated traffic.

For the reasons listed above, Applicant's proposed use will have significantly positive, long-term environmental, economic, social and energy consequences resulting from the use at the proposed site as compared to other areas which would also require a goal exception, especially given the history of similar uses on adjacent properties. Applicant's relocation will have significant, positive energy and environmental consequences by reducing fuel and traffic use from its Corvallis site, and it will provide tremendous economic benefits to the state and region through relocation of its business to the Aurora Airport. The Board finds this criterion is satisfied.

(d) The proposed uses are compatible with other adjacent uses or will be so rendered through measures designed to reduce adverse impacts.

EXHIBIT M

The vicinity in which the property is located is dominated by the airport. The airport has been in existence since 1943 and has remained compatible with the adjacent resource uses in the area over this period. Applicant's proposed use, which would effectively expand the airport and include uses already existing adjacent to resource uses, will be bordered to the west by the preexisting airport development, to the south by Keil Road NE, and to the east by Airport Road NE. To the north is a rural religious retreat, which also borders the existing airport operations. The proposed primary operations of the use will be located on the southern portion of the parcel which should minimize any interference between the proposed use and the retreat to the north. Similarly, the farming activity to the south, across Keil Road NE has not been negatively impacted by the current airport development. The Board finds that expansion of currently existing uses will not render the airport uses otherwise incompatible with farming to the south. There has been and there is currently no affect on agricultural activity on the property from the existing airport uses. Applicant's extension of airport uses farther east onto the property will not have a negative effect, especially now with a larger buffer in Airport Road.

Regarding the activity that will take place on the property, all helicopter repairs will be done indoors. The Board finds Applicant's use to be relatively low impact for an industrial proposal, particularly with respect to both air and road traffic. Many of its employees are offsite with the helicopters thereby reducing vehicle trips. The helicopter traffic occurs predominantly for a brief period in the spring and fall between fire season dispatch and returns. This approval further conditions the number of employees regularly onsite as well as site grading and storm drain activities to prevent adverse impacts to surrounding properties. The applicable airport overlay zone provides additional restrictions on development on the property.

Many neighbors of the airport testified in support of the proposed use, including other airport users and numerous neighbors in the residential subdivision to the southwest of the airport, Deer Creek Estates. The airport manager for the Corvallis Airport, where Applicant is currently located, also provided testimony explaining how Applicant has been a compatible neighbor to airport users and local residents. The Applicant's competitor, Columbia Helicopters, has long operated 24 acres at the north end of the airport without conflict with neighbors or airport users. Lastly, the State of Oregon's Airport Land Use Compatibility Guidebook indicates that industrial uses, like the Applicant's, are specifically permitted within 10,000 feet of the airport runway and are compatible with the airport itself.

Concern was raised regarding the flight paths of the helicopters and their landing location. A nearby resident was concerned for safety reasons of a helicopter power failure resulting in a crash. At the Board hearing, testimony was provided indicating that helicopters do have the ability to maneuver and glide in the event of power failure, even to the point of being able to control a landing location. The Board finds that it does not control flight paths of the aircraft at the airport; the FAA controls flight paths. The Board also finds the evidence in the record to demonstrate that Applicant's proposed use will minimize conflicts with neighboring property owners. The highest concentration of helicopter flights to and from the facility occurs in two, relatively brief periods of the year (spring and fall). The pilots are highly trained and experienced as needed for their firefighting purposes. The airport manager of the City of Corvallis airport indicates that the Applicant has a history of controlling its flights in a manner that avoids conflict with neighbors. In addition, Mr. Faegre indicates that the Aurora Airport has one of the strongest noise abatement programs in the country. For these reasons, the Board finds that the proposed use will be highly compatible with neighbors both within and outside the airport, whether the helicopters are landing at the airport runway or at the subject property. The Board finds that the Applicant's helicopters will take off and land predominantly at the subject site except in times of inclement weather, emergencies, or as needed to avoid air traffic congestion. Fixed

EXHIBIT M

wing aircraft of the company and its suppliers, vendors, and independent contractors that deliver parts and personnel will land on the airport runway and taxi to the Applicant's facility.

For these reasons, the Board finds that the proposal, as conditioned hereby, is compatible with adjacent uses and therefore satisfies this criterion.

39. The Board finds that the Applicant has demonstrated satisfaction of the criteria for taking a Goal 3 exception for the 27 acres of the subject parcel.

Goal 14 Exception

40. The purpose of Goal 14 is to provide an orderly transition from rural to urban land uses. The subject property is rural land by definition, is zoned EFU, and the proposed use is an urban use. The existing airport was deemed to be a type of urban use in *Murray et al. v. Marion County,* 23 OR LUBA 268 (1992). Airports tend to be located away from urban zoned land. An exception to Goal 14 is required for an urban use on EFU zoned land. OAR 660-014 provides the criteria for taking a reasons exception to Goal 14.

41. Below are the criteria and findings of OAR 660-014-0040:

(1) *As used in this rule, "undeveloped rural land" includes all land outside of acknowledged urban growth boundaries except for rural areas committed to urban development. This definition includes all resource and nonresource lands outside of urban growth boundaries. It also includes those lands subject to built and committed exceptions to Goals 3 or 4 but not developed at urban density or committed to urban level development.*

(2) *A county can justify an exception to Goal 14 to allow establishment of new urban development on undeveloped rural land. Reasons that can justify why the policies in Goals 3, 4, 11 and 14 should not apply can include but are not limited to findings that an urban population and urban levels of facilities and services are necessary to support an economic activity that is dependent upon an adjacent or nearby natural resource.*

The subject property is outside the Aurora urban growth boundary and is on undeveloped rural land but is adjacent to the airport which is zoned P and has been developed with urban type uses. Airports are generally located away from urban areas due to safety and noise concerns. According to the Oregon Department of Aviation, the Aurora State Airport has evolved over the years into the busiest state-owned airport and the fifth overall busiest airport in the state. *See* Oregon Department of Aviation 2007 System Master Plan-Aurora State Individual Airport Report, Page 18. Today, the airport continues this growth. The significant economic contribution the airport already makes to the region is discussed below and throughout these findings. The Aurora State Airport does not presently have the capacity to meet the demand that increased usage has caused. This deficiency is caused by the limited amount of land currently at the airport that has the appropriate zoning designation to allow for airport development.

The eventual need to expand the airport has been documented as far back as at least 1976. The 1976 Aurora Airport Master Plan was incorporated into the Marion County Comprehensive Plan, of which it remains a part today. The 1976 version of the Airport Master Plan forecasted a significant increase in general aviation traffic. In order to deal with this increase, which has in fact occurred as predicted, the plan recommended the acquisition of additional surrounding land. Specifically, the master plan noted

EXHIBIT M

that "Space for airport expansion is impacted on three sides by highways, relatively difficult to relocate, and on the fourth side by privately owned and controlled property... Expansion will be into the space east of present airport property." The Land Use Plan drawing incorporated into the master plan notes on the subject property that "THIS AREA IS ACCEPTABLE FOR AIRPORT-RELATED DEVELOPMENT UNDER PRIVATE OWNERSHIP." This note continues to appear on other site plans and airport layout plans through the years. One recommendation to implement this plan prescribed acquiring 113 acres of land on the east side of the airport. The plan went on to note that "Without this space for airport development it will be impossible to implement a complete and productive airport development program".

The need exists to expand the airport facility to accommodate both historical and anticipated growth. The subject property has been identified, at least as far back as 1976 in the Airport Master Plan, as the most appropriate location for purposes for expansion. Applicant's use will provide additional land and support services that the airport will use to help encourage and facilitate the growth potential at the airport facility. Numerous documents including the MCCP, the Aurora State Airport Master Plan, and the October 2000 update to the Aurora State Airport Master Plan (though not adopted by the county), state the need for additional acquisition of land at the airport. The Aurora State Airport has been selected by the Oregon Legislature as the first pilot site to participate in its "Through the Fence" program (*see* ORS 836.642), which specifically promotes the economic development of rural airports. The stated purpose of ORS 836.642 is to "encourage development of through the fence operations designed to promote economic development by creating family wage jobs, by increasing local tax bases and by increasing financial support for rural airports." The Aurora State Airport has the potential to be an even more significant economic contributor than it is now.

As discussed in the Board's findings with respect to the Goal 3 exception above, the subject property is situated in a perfect location for the Applicant's business. The proximity of the airport to the aerial forest fire fighting portion of the business, along with a close proximity to other urban centers provide additional reasons why the Aurora State Airport provides an ideal location for Applicant's business. Furthermore, the subject property was available for outright ownership. The long-term financial and control advantages of ownership rule out leasing land for Applicant's operations as an option. A significant economic advantage regarding the subject property is that the Applicant already owns the land. Finding lands adjacent to airports to purchase in this state is difficult enough, not to mention lands which are adjacent to airports which have as much to offer Applicant as the Aurora State Airport does. Finally, Applicant would be considered a fixed based operator at the airport. The October 2000 update to the Aurora State Airport Master Plan, describes these operators as needing "easily identified and available public access, visibility from public roads, and good airfield access, and should be easily locatable by itinerant traffic landing at the airport." *See* page 4-15. The subject property meets all of these criteria, as it has frontage and public access off of Airport Road NE, Keil Road NE, and Yellow Gate Lane; as it has good airfield access with an easement which allows direct access to airport facilities; and as it can be easily locatable by itinerant traffic landing at the airport since it is within the horizontal surface district of the airport.

The Board finds that securing Applicant's company at this location would be a benefit for not only the airport, but the city, county, and state as well. The Applicant reached $80 million in sales in 2007, and it is estimated to reach $110 million in sales in 2010. Currently, Applicant subcontracts approximately $5 million to local Oregon companies and estimates that the number should increase to $8 million within the first year after consolidation of the operation is complete at the airport. The consolidation of the company at the airport would mean that there will be an immediate need for approximately 85 additional jobs in the region, with average salaries ranging from $50,000 to $60,000 per year. The

EXHIBIT M

Applicant projects the need to add approximately 20 additional positions per year, with an anticipated workforce of 160 employees in place by the end of the 5th year.

For the reasons listed above, there exist compelling reasons in this case for taking an exception to Statewide Planning Goal 14 to allow Applicant to locate its use on the subject property, adjacent to the Airport.

(3) To approve an exception under section (2) of this rule, a county must also show:

(a) That Goal 2, Part II (c)(1) and (c)(2) are met by showing that the proposed urban development cannot be reasonably accommodated in or through expansion of existing urban growth boundaries or by intensification of development in existing rural communities;

The Aurora UGB is located approximately 1300 feet from the subject property. The land between the existing UGB and the subject property is resource land, currently in farm production. The City of Aurora originally proposed that the airport be included in the UGB when it was going through acknowledgement; however, this was not approved by LCDC and the UGB was reduced to the present area. It continues to be unreasonable to extend the UGB this distance due to the amount of intervening resource land.

Likewise, attempting to locate this use in a rural center, or rural community would be unreasonable. There are no rural centers or communities in Marion County that lie adjacent to an airport. The proposed use depends on access to adjacent airport facilities. The business cannot be located away from any airport. Furthermore, proximity to the Aurora State Airport specifically is particularly important. This specific site offers several unique amenities that cannot be duplicated by any city, rural community, or airport in the state. The Aurora airport is the location of the supplier, repair service provider, and engineer of the Applicant's specially designed tail rotor blades, Metal Innovations, Inc. Metal Innovations, Inc. is the only company in the world that supplies this product and service for the Applicant. This is not only important for operations efficiency, but also for reducing energy and transportation costs associated with shuttling parts to and from Metal Innovations, Inc.

In addition, there are significant strategic advantages in being located near the Applicant's two competitors: Columbia Helicopters, Inc. is located within the Aurora Airport, and Evergreen Helicopters, Inc. is located at the McMinnville Airport. Included in those advantages is proximity to the human resource pool of specially trained mechanics that has the expertise necessary to perform the service and repairs needed at the Applicant's proposed facility. The center of that pool is in the Aurora area because of the presence of the Applicant's two competitors.

The "Through the Fence" access, in connection with the private airport access easement owned by the Applicant, will allow Applicant the ability to directly access the airport and runway. Accordingly, this location affords the most economic, energy and environmentally efficient operation possible.

There are no rural centers which could encompass the proposed exception area. The closest rural center, Fargo Interchange, is approximately 10,000 feet west of the subject property and airport. The closest rural community is Butteville, which is located approximately 4.7 miles from the airport. Notwithstanding proximity to the airport being an issue, the Applicant is proposing a use that is larger in scale than is typical for most urban development in these areas. For example, Butteville, which

EXHIBIT M

contains approximately 85 dwellings, an art studio, and a church, would be an inappropriate location to intensify development density to allow for larger scale airport related uses. The predominantly residential character of the community is not compatible with the Applicant's proposed uses, especially certain noise and safety issues generally associated with airport related development as already exists at the airport. Intensifying development in existing rural communities, in this case, would have negative consequences for both the rural community and the Applicant.

For the reasons listed above, the Board finds the proposed urban development cannot be reasonably accommodated in or through expansion of existing urban growth boundaries or by intensification of development in existing rural communities. This criterion is satisfied.

> *(b) That Goal 2, Part II (c)(3) is met by showing that the long-term environmental, economic, social and energy consequences resulting from urban development at the proposed site with measures designed to reduce adverse impacts are not significantly more adverse than would typically result from the same proposal being located on other undeveloped rural lands, considering:*
>
> > *(A) Whether the amount of land included within the boundaries of the proposed urban development is appropriate, and*

The Board hereby incorporates its findings as to the necessity of re-zoning Applicant's entire 27 acres from the findings above under OAR 660-004-0020.

The Board finds the size appropriate particularly in light of the predicted needs of the Aurora State Airport and the deficiency to meet those needs. According to the Oregon Department of Aviation, the Aurora State Airport has evolved over the years into the busiest state-owned airport and the fifth overall busiest airport in the state. *See* Oregon Department of Aviation 2007 System Master Plan-Aurora State Individual Airport Report, Page 18. According to the update to the Aurora State Airport Master Plan, dated October 2000, (2000 Plan) a recommendation is made to provide increased space for increased fixed base operators (FBOs), which provide goods and services which complement the airport and its users. The 2000 Plan recommends that, "To provide sufficient land for new FBOs, 8 to 10 acres will be needed." In addition to the land needed to support the anticipated need for new FBOs, the 2000 Plan predicts that there will be an increased need for hangars to accommodate 62 additional based aircraft, which will require an additional 6.1-7.3 acres of land, to adequately serve the 318 total based aircraft anticipated to be located at the airport in the future. In sum, the 2000 Plan update predicts that by 2017, approximately 14.1-17.3 acres of additional land (for both FBOs and hanger space) will be needed to accommodate forecasted growth of the airport aside from Applicant's intended use. The 2000 Plan also reports that the surrounding area has a good supply of available adjacent land for future development, and points out that the development pattern for the airport has always been on adjacent private land.

The 2000 Plan update is now nearly 10 years old and made projections through year 2017.[3] In February 2008, the Oregon Department of Aviation adopted the Oregon Aviation Plan 2007, (OAP 2007). This document is intended to guide the management and growth of all Oregon airports over the

3 This update has never been formally adopted by Marion County. The County has not adopted any revision to the master plan since the 1976 version of the Aurora State Airport master plan was incorporated into the comprehensive plan. Nevertheless, the Board finds the update to provide reliable information relevant to this proposal.

EXHIBIT M

next 25 years. The aviation activities and future projections in this study were updated. OAP 2007 represents the most current analysis of the activities taking place at the airport today. The report specifically identified that hangered aircraft storage was one area in which the airport was deficient. The data in OAP 2007 reveal that the 2000 update to the Aurora State Master Plan did not fully anticipate the growth that would occur at the airport. OAP 2007 reports that, as of 2005, there were 387 based aircraft at the airport. This is already 69 more aircraft than the 2000 Plan update anticipated would be located at the airport in 2017. By 2025, OAP 2007 forecasts that 498 based aircraft could potentially be located on site at the airport. Using this 2025 estimate, in light of demand already significantly exceeding the 2000 Plan estimates, airport needs easily exceed the 27.5 total acres that are the subject of this application, let alone the acreage to be available for FBOs and hangers after establishment of Applicant's proposed facility.

The Board finds that the subject property provides an appropriate amount of land to meet at least some of the need from current and future growth, including the Applicant's proposal and projected operations. This criterion is satisfied.

(B) Whether urban development is limited by the air, water, energy and land resources at or available to the proposed site, and whether urban development at the proposed site will adversely affect the air, water, energy and land resources of the surrounding area.

The uses on the property will be similar to those uses that currently exist on the adjacent airport property. The Board finds that an onsite well and septic system will be feasible to handle the required demands of the proposed use, with the potential exception of water for fire protection, which may be provided by connection to the adjacent, existing facilities at the airport. As testified at the hearing by Applicant's engineer, that need may be met by either the existing fire protection district or the well onsite. As a condition under this approval, Applicant is required to provide a report demonstrating the capacity of any facility. Stormwater will be detained onsite. Applicant is required, under conditions of this approval, to not adversely impact storm drainage in surrounding areas. Environmental Management Systems, Inc. conducted a preliminary evaluation for onsite water feasibility in May of 2008 concluding that there was capacity for up to 100 workers were expected to work onsite in a facility containing showers (the approval will be conditioned to allow only 70 employees to be regularly scheduled on site). There are no anticipated limitations to the air, water, energy and land resources at or available to the proposed site. There are no adverse impacts on the carrying capacity of the environmental resources, as the area historically has no ground water issues, and no other known issues relating to a lack of capacity for sewer and water for airport users. There are no identified areas for fish or wildlife habitat, and no wetlands or streams are present on the property. There are no conflicts or limitations as to onsite resources which would serve the property.

Likewise, urban development on the subject property will not adversely affect the resources of the surrounding area. Using the subject property for airport related uses is an appropriate use of this land, given it is adjacent to other airport development, buffered from agricultural activity by roads, and long-identified as suitable for airport development. Most of the activity associated with Applicant's business will be conducted onsite, or on the adjacent airport properties. As previously mentioned, the location of the airport is necessary for Applicant, especially since it regularly uses the Portland International Airport (PDX) for equipment deliveries, and to dispatch personnel. A move from the Corvallis facility to the Aurora State Airport would save the Applicant approximately 2.5 hours and 130 miles per round trip to and from PDX. For these reasons, Applicant's proposal should actually have a positive effect on the environment, energy and land resources of the surrounding area.

EXHIBIT M

The entire western border of the subject property is adjacent to the currently developed airport. The proposed uses on the property are similar in nature to those that have existed at the airport for many years. Those uses have coexisted with the adjacent resource uses in the area, and the Board finds this will continue after development of the subject property. This development will have a more significant buffer to the east of the property than was provided by Yellow Gate Lane to the previous easternmost airport development, as Airport Road NE is improved as a major collector. The property is also buffered from agricultural uses to the south by Keil Road NE.

The impact of establishing this type of business on other undeveloped rural land would be far more dramatic than the impact at the proposed location. The airport has a runway and other amenities necessary for the Applicant's business that would not be available if the use were sited on other undeveloped rural land. Because the location adjacent to an existing airport offers necessary existing infrastructure the economic, environmental, and energy impact will be reduced. In addition, there is no other undeveloped land that is located near a rural airport within the county. Surrounding landowners will be minimally affected and can continue to use their property for farming as they have done in the past.

As conditioned, and in light of the longstanding coexistence of this agricultural area with the Aurora State Airport, the capacity of the subject property to accommodate the proposed use, the lack of anticipated negative affects on the air, water, energy, and land resources onsite or on the surrounding area, the buffers provided by Airport Road NE and Keil Road NE, and the positive affects on the energy and land resources in the area, this criterion is satisfied.

(c) That Goal 2, Part II (c)(4) is met by showing that the proposed urban uses are compatible with adjacent uses or will be so rendered through measures designed to reduce adverse impacts considering:

(A) Whether urban development at the proposed site detracts from the ability of existing cities and service districts to provide services; and

All water and septic requirements of this proposed use will be handled onsite, or by connection into the existing facilities at the airport. The proposed use is anticipated to generate 878 automobile trips per day, 123 of those being PM peak hour trips. The Applicant's traffic engineer and County Engineering staff concluded, based on Applicant's Traffic Impact Analysis (TIA) that the existing and anticipated level of trips will be accommodated by the existing capacity of the road system. The October 2000 update to the Airport Master Plan concurs with this conclusion. The 2000 update provides:

Surface access to all parts of the airport is good. The airport businesses have access from Arndt Road, Airport Road and Keil Road. Access to Interstate 5 is a short drive on the Wilsonville-Hubbard Highway. Interstate 5 can also be accessed via Ehlen Road. Aurora State Airport, like most general aviation airports, does not generate a significant number of auto or truck trips per day. The existing and anticipated level of trips can easily be accommodated by the existing road system.

See page 4-22. In addition, Applicant will contribute toward measures required to mitigate its impact.

Applicant's proposed use will be located adjacent to other uses that have been established at urban densities outside of the Aurora UGB, and that rely very little upon the provision of services from cities

EXHIBIT M

or service districts. Like the existing users at the airport, the Applicant will rely only on county transportation facilities, the Aurora Rural Fire Protection District and the Marion County Sheriff. Given Applicant's location adjacent to users that already utilize these services, Applicant will be in the best position to receive the benefits of these services, and should in no way detract from the provision of services. This criterion is satisfied.

(B) Whether the potential for continued resource management of land at present levels surrounding and nearby the site proposed for urban development is assured.

The airport has existed surrounded by resource land and uses since 1943. During that time, there has been no evidence that the airport has reduced the potential for continued resource management of the surrounding land. This expansion of the airport will not change the interaction with the surrounding properties and, as discussed above, the proposed use is compatible with nearby agricultural resource lands. The airport overlay zone places additional limits on potential development of the property, thus reducing the possibility that the Applicant could establish a use that would be incompatible with surrounding properties. Lastly, Airport Road NE and Keil Road NE provide a buffer between the agricultural uses and proposed urban uses on this site. Airport Road NE, which is developed as a major collector, will provide a greater buffer between airport development and agricultural uses than Yellow Gate Lane currently provides. This criterion is satisfied.

(d) That an appropriate level of public facilities and services are likely to be provided in a timely and efficient manner; and

The primary services needed for this proposed use are water and sewer, both of which will be provided onsite. The Board finds that an onsite well and septic system will be feasible to handle the required demands of the proposed use, with the potential exception of water for fire protection, which may be provided by connection to the adjacent, existing facilities at the airport. Testimony at the hearing indicated that need may be met by either the existing fire protection district or the well onsite. As a condition of this approval, the Applicant is required to provide a report demonstrating the capacity of the facility. Fire suppression service will likely be provided by the existing Aurora Rural Fire Protection District, and law enforcement, to the extent necessary, will be provided by the Marion County Sheriff. As discussed above, these services are currently available to the properties in the area and can be efficiently provided to the subject property. No public facilities or services are thus required except for roadways. No new roadways are needed. Currently, the intersections of Ehlen Road with OR 551 and Airport Road do not meet operating standards. Both intersections have improvements identified with a traffic signal at Airport Road and dedicated left turn lanes for Ehlen Road. The Applicant's traffic engineer and County Public Works staff determined that any impacts to roadways caused by Applicant's proposal will be minimal so long as 1) no more than 70 employees are regularly scheduled onsite, and 2) proportionate contributions are made by Applicant to mitigate its impact at the studied intersections. This approval is conditioned accordingly. This criterion is satisfied.

(e) That establishment of an urban growth boundary for a newly incorporated city or establishment of new urban development on undeveloped rural land is coordinated with comprehensive plans of affected jurisdictions and consistent with plans that control the area.

As demonstrated above, the proposed uses and development are consistent with the applicable sections of the Marion County Comprehensive Plan. Likewise, development of this property is consistent with the 1976 Aurora State Airport Master Plan, which has been incorporated into the Marion County

Comprehensive Plan. Specifically, this Master Plan designates the subject property as an area suitable for airport expansion under private ownership. This criterion is satisfied.

Some participants provided testimony asserting that approval of this application will represent inadequate planning and threatened encroachment of the airport toward the City of Aurora. These participants advocate for the Board's waiting until new master planning is complete. The Board finds this proposal is consistent with the existing, current Aurora State Airport Master Plan, the Marion County Comprehensive Plan, the zoning regulations of the county, and the Oregon Department of Aviation's Aviation Plan. The Master Plan and subsequent updates by both the county and the Oregon Department of Aviation have long identified the subject property as suitable for airport expansion. The Board finds no benefit or necessity in delaying this decision for additional Master Planning when Master Planning is already in place. The 1976 Aurora State Airport Master Plan was adopted into the county's comprehensive plan. The subsequent updates and aviation plans for the county and state have not been formally adopted by the county, but the Board finds they nevertheless provide valuable, pertinent information regarding the airport and this application. The Board does not find that additional Master Planning will produce better information. Testimony at the Board hearing demonstrated that the new Master Plan will not address zoning or infrastructure at the airport at all. The Board finds that approval of Applicant's proposal reflects good planning consistent with applicable regulations using existing planning documents.

42. OAR 660-014-0040(4) is not applicable.

43. The Board finds that, as conditioned, this application meets the criteria for a Goal 14 exception under OAR 660-014-0040.

STATEWIDE PLANNING GOALS

44. Relief from one goal does not excuse compliance with other Statewide Planning Goals, and, comprehensive plan amendments must be consistent with Statewide Planning Goals.

Goal 1: Citizen Involvement. To develop a citizen involvement program that insures the opportunity for citizens to be involved in all phases of the planning process.

The notice and hearings process before the hearings officer and the Board provided opportunity for citizen involvement.

Goal 2: Land Use Planning. To establish a land use planning process and policy framework as a basis for all decisions and actions related to use of land and to assure an adequate factual basis for such decisions and actions.

The Board finds that the applicable substantive and procedural requirements governing Applicant's proposal, including examination under the county's acknowledged implementing regulations, have been followed and are satisfied.

Goal 3: Agricultural Lands. To preserve and maintain agricultural lands.

The Applicant requested an exception to Goal 3. The exception is discussed above and the Board approves the exception.

EXHIBIT M

Goal 4: Forest Lands. To conserve forest lands by maintaining the forest land base and to protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest species as the leading use on forest land consistent with sound management of soil, air, water, fish and wildlife resources and to provide for recreational opportunities and agriculture.

The subject site is not in a forest zone and has no known forestland capability. This goal is not applicable.

Goal 5: Open Spaces, Scenic and Historic Areas, and Natural Resources. To conserve open space and protect natural and scenic resources.

No identified wetlands, riparian ways, aggregate sites, big game habitat, sensitive waterways, or cultural sites are identified on or immediately adjacent to the Exception Area. This goal is not applicable.

Goal 6: Air, Water and Land Resources Quality. To maintain and improve the quality of the air, water and land resources of the state.

The Board hereby incorporates its findings above under OAR 660-014-0040(3)(b) relating to air, water, and land quality. The Exception Area is not within an identified air or watershed area. The subject site is not in an identified sensitive groundwater overlay zone. The proposed use is not one which will result in significant particulate discharge into the air. State law, administered through the county, governs septic disposals. State and county regulations are consistent with this goal. The Applicant will be required to comply with DEQ regulations and as conditioned, groundwater resources will be protected. As addressed above, based on the analysis of Applicant's engineer and consultants and evidence provided by similar uses adjacent to the subject property, development on the property will not exceed the carrying capacity of area resources, degrade area resources, or threaten the availability of such resources. The Board finds the application consistent with Goal 6.

Goal 7: Areas Subject to Natural Disasters and Hazards. To protect life and property from natural disasters and hazards.

The subject site is not in an identified floodplain and is not subject to other natural disasters or hazards. This goal is not applicable.

Goal 8: Recreational Needs. To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts.

No goal 8 resources are identified on the subject site or implicated by this application. This goal is not applicable.

Goal 9: Economic Development. To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon's citizens.

OAR Chapter 660-09, implementing Goal 9, applies only to comprehensive plans for areas within the urban growth bundary. The proposed exception area is outside of the UGB. Nevertheless, Applicant's proposal has Goal 9 implications based on the direct and incidental economic advantages that this user

EXHIBIT M

will bring to the region.

The direct economic benefit to the region is significant. The Applicant reached $80 million in sales in 2007. The rate of growth has been steady every year and Applicant estimates it will reach $110 million in sales by 2010. Currently, Applicant subcontracts approximately $5 million to local Oregon companies and estimates that the number should increase to $8 million within the first year after consolidation of the operation is complete at Aurora. The consolidation of the company in Aurora would mean that there will be an immediate need for 85 additional jobs in the region, with average salaries ranging from $50,000 to $60,000 per year. The Applicant projects anticipated growth to require approximately 160 employees by the end of the 5th year. All of these jobs would be related to a use which promotes the health, welfare, and prosperity of Oregon's citizens. A substantial number of jobs will also be generated by construction of the Applicant's new facility, which is estimated to cost approximately $19 to $20 million. Property tax revenues from the property, once improved, will also generate approximately $150,000.

The incidental economic benefits are also important to note as increased development will have a positive economic impact upon the cty of Aurora. Applicant's generation of new jobs will also have the secondary effect of increased patronage of local businesses. For example, the 2007 Oregon Aviation Plan analyzed the economic impact that the airport had on regional economy. In 2005, 2,403 jobs were directly related to both on and off airport related impacts, providing $52,347,000 in local wages. *See* Oregon Aviation Plan 2007, Appendix E, Page 6. The sum of on-airport economic activities, off-airport spending by visitors who arrive by air, and spin-off impacts led to local business sales of $134,827,000. This impact is proportionate to the impact that public-use airports have on the state as a whole. Oregon Department of Aviation public-use airports, including airport tenants, directly employ 7,000 people for aviation related activities and expend $259,000,000 in wages. *See* Oregon Aviation Plan 2007, Aurora State- Individual Airport Report, Page 32. These employees and tenants earned an average annual salary of $36,000 per year for aviation activities and $35,000 per worker, when including non-aviation jobs. The significant economic benefits that Applicant would bring would not only benefit the region by providing above average wage jobs and utilizing regional goods and services, but the state as a whole by helping to promote the airport transportation system.

This economic opportunity comes at a time when another significant employer at the airport, Artex Aircraft Supplies, Inc., is closing its doors and consolidating its operations away from Aurora to Arizona. Artex's closure has resulted in the loss of 154 jobs at the Aurora Airport. Unlike Artex, which leased its space at the airport, Applicant is committing its resources to the Aurora Airport by consolidating its United States operations to the airport on land that it owns. The Board finds that the county and the airport need this economic opportunity to advance its Goal 9 economic needs. The Board finds that the application provides a diversified and substantial economic opportunity to the county and state.

Goal 10: Housing. To provide for the housing needs of citizens of this state.

OAR 660-08-000 is intended to define standards for compliance with Goal 10. OAR 660-08 deals with the provision of adequate numbers of needed housing units, and the efficient use of buildable land within urban growth boundaries. The subject site is not within a UGB. The proposed development is for airport related industrial use. The property is not designated for residential purposes currently. This Goal is not applicable.

EXHIBIT M

Goal 11: Public Facilities and Services. To plan and develop a timely, orderly and efficient arrangement of public facilities and services to serve as a framework for urban and rural development.

Fire and police protection are already provided and additional public services are not required as a result of this application. Traffic is addressed elsewhere in this recommendation. This application is consistent with Goal 11.

Goal 12: Transportation. To provide and encourage a safe, convenient and economic transportation system.

Under OAR 660-012-0060(1), amendments to acknowledged comprehensive plans and land use regulations which significantly affect a transportation facility shall assure that allowed land uses are consistent with the identified function, capacity, and performance standards (e.g. level of service, volume to capacity ratio, etc.) of the facility.

Under OAR 660-012-0060(2), a plan or land use regulation amendment significantly affects a transportation facility if it:

(a) Changes the functional classification of an existing or planned transportation facility; (exclusive of correction of map errors in an adopted plan);

(b) Changes standards implementing a functional classification system; or

(c) As measured at the end of the planning period identified in the adopted transportation system plan:

(A) Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;

(B) Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP or comprehensive plan; or

(C) Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.

The proposed Exception Area abuts Keil Road along the property's southern border to the north and Airport Road along the property's eastern border, which are identified as a local and major collector street respectively on the Rural Transportation System Plan (RTSP). As the Applicant's traffic engineer's TPR analysis concludes, this application for comprehensive plan amendment, zone change, and reasons exception will have no significant affect on the transportation facilities. County engineering staff agree with the traffic engineer's conclusions. Oregon Department of Transportation received the traffic impact analysis, but did not submit comments.

Applicant estimates having approximately 85 employees upon opening the new facility. After complete consolidation and expansion, it estimates it could have as many as 160 employees thereafter. This is the number of employees on Applicant's payroll. However, only some of these employees will

be at the proposed airport facility on any given day. During the period from May to November, the majority of Applicant's employees are out in the field as pilot and repair crews that remain with the helicopters in firefighting operations. While the helicopters are returned to the facility for winter overhaul maintenance during the months from November to May, there are more employees on the site, but still only those necessary for repair and maintenance. Based on current employment operations data, Applicant concluded that of the 85 employees on payroll after opening of the new facility, up to 20 employees would be onsite during the summer months, and up to 40 employees would be onsite during the winter months. Of the 160 employees estimated to be on payroll after Applicant's complete consolidation and anticipated growth, Applicant anticipates up to 35 could be onsite in the summer months and up to 70 employees regularly onsite in the winter months.

Applicant's traffic engineer recommended a cap on the number of employees regularly scheduled at the site at one time. The traffic engineer recommended that such cap be 70 employees regularly scheduled at the site at one time. The Board will condition this approval consistent with that recommendation together with an annual reporting requirement. In the event Applicant ever proposes to exceed that number, a new traffic impact study will be required and traffic impacts mitigated. Consistent with model and assumptions used in the TIA, this condition does not prohibit more than 70 employees ever being on site, but that more than 70 employees cannot regularly be on site at one time.

Applicant is required, as conditioned in this approval, to contribute a share proportionate to its impact at impacted intersections. Specifically, Applicant shall contribute its proportionate share toward improvements at the intersections of Ehlen Road and Airport Road, OR 551 and Ehlen Road, OR 551 and Keil Road, and Airport Road and Keil Road. Applicant is also restricted under the conditions of this approval from constructing any new access to Airport Road, other than access for emergency vehicle access only.

Accordingly, as conditioned, the Board finds that the proposed plan amendment, zone change, and reasons exception will not change the functional classification of the roadway, change standards implementing the functional classification system, allow levels of land uses that result in levels of travel or access inconsistent with a major arterial and collector streets, or reduce performance standards of the roadways. Thus the proposal will not have "significantly affect" the surrounding transportation system. The Board finds that this Goal is satisfied.

Goal 13: Energy Conservation. To conserve energy.

The Board finds that the relocation and consolidation of Applicant's operations at the proposed site will decrease the company's overall energy consumption. The move of one of Applicant's facilities from the Corvallis Municipal Airport to the Aurora State Airport reduces the round trip distance to the Portland International Airport, frequently used by Applicant, by 75%. This directly translates to conserved fuel and energy costs as well as reduced impact to state and local transportation systems. By choosing to relocate to the Aurora State Airport, Applicant has chosen to consolidate its operations in one location, which should decrease the energy consumption related to coordinating its operations and transporting materials, equipment, and personnel from one location to another around the country. Applicant's proposal accomplishes this goal.

Goal 14: Urbanization. To provide for an orderly and efficient transition from rural to urban land use.

Applicant requested an exception to Goal 14. That exception is addressed above, and the Board approves the exception.

EXHIBIT M

Goals 15, Willamette River Greenway, 16, Estuarine Resources, 17, Coastal Shorelands, 18, Beaches and Dunes, and 19, Ocean Resources, are not applicable because the subject site is not within the Willamette River Greenway, or near any ocean or coastal related resources.

Exceptions to Goals 3 and 14 are approved as conditioned, and the Board finds the remaining goals either inapplicable or advanced as discussed above.

OAR 660-004-0018 – LIMITED USE OVERLAY

45. OAR 660-004-0018(4)(a) provides for a limited use overlay when a reasons exception is taken. The text of the OAR is set out above under Exceptions to Statewide Planning Goals. In this case, an overlay zone is required.

The Applicant proposes that the use be limited to the following uses: helicopter uses, services, maintenance, offices, repair, overhauling, and other uses associated with the helicopter business. The Board finds these uses are reasonable and consistent with the reasons exception granted under this approval. This approval is conditioned on imposition of this limited use overlay zone. OAR 660-004-0018(4) is satisfied.

ZONE CHANGE

46. The proposal is to change the zoning on the 27.48 acre parcel from EFU to P.

47. The following are the required criteria under MCZO 123.060 for a zone change as well as the Board's findings demonstrating satisfaction of each criterion:

(a) The proposed zone is appropriate for the Comprehensive Plan land use designation on the property and is consistent with the goals and policies of the Comprehensive Plan and the description and policies for the applicable land use classification on the Comprehensive Plan; and

The "Public" zone is the appropriate implementing zone since it is the only zone that implements the "Public" comprehensive plan designation, which is also requested as part of this application. In addition to the applicable regulations found in MCRZO Chapter 171, which governs development in Public zones, the site will also be subject to the regulations of the Airport Overlay Zone found in MCRZO Chapter 177. On this site, the Airport Overlay Zone is also appropriate for the comprehensive plan land use designation, since it further restricts development that occurs adjacent to airports, which are permitted in areas zoned and designated Public.

The Marion County Comprehensive Plan does not provide detailed policy related to the "Public" land use classification. In the rural development section of the MCCP, the text notes that public uses are necessary. In agricultural areas, these uses shall be reviewed by the conditional use process to ensure compatibility. An application for a conditional use permit was submitted concurrently with this application and is approved with conditions. The MCCP balances the need for public uses, such as airports and airport uses, with the need to preserve resources. To accomplish this, the MCCP encourages a case-by-case analysis of public zoning and uses on publically zoned land. The Board finds that Applicant has demonstrated that this use will be compatible with surrounding agricultural lands. The findings with respect to exceptions to Goals 3 and 4 address that compatibility. This application process ensures that this case can be examined on its individual merits as to the compatibility the proposed location and intended use will have with surrounding properties. The

EXHIBIT M

Board finds that the Public zone is appropriate for this the Public comprehensive plan designation sought and is consistent with the goals and policies of that designation. The application is consistent with MCZO 123.060(a).

(b) The proposed change is appropriate considering the surrounding land uses and the density and pattern of development in the area; and

The Public zone, together with the limited use overlay zone imposed with this zone change, is appropriate considering the surrounding land uses, density, and development pattern. The findings above relating to exceptions to Goals 3 and 14 are incorporated in this finding to demonstrate compatibility and appropriateness of the proposed zone and use in light of the surrounding area. The Aurora State Airport is the dominant feature in this vicinity. The subject property is located immediately adjacent to the east of existing airport uses located on airport property. The airport is already developed at urban densities. The subject property is bordered on three sides by roadways, both public and private. The northernmost portion of the airport is already bounded on the east side by Airport Road NE, which is a major collector in the RTSP. The proposed change would establish Airport Road as the easternmost boundary of the airport uses, and provide a more adequate buffer from the agricultural uses further to the east of Airport Road NE. Furthermore, Keil Road NE would effectively extend the southern boundary of where some airport related users are situated. Both Airport Road NE and Keil Road NE are effective buffers to ensure compatibility between the higher density uses at the airport and the adjacent agricultural lands. The proposed change would use these same buffers in the same way as the existing developments have done for years at this location. As mentioned above, there is a documented need for expansion at this location to address service deficiencies. The Airport's Master Plan has identified this property as suitable for private airport development since 1976.

Much of the EFU zoned land in this area, including the subject property, is smaller than the typical 80 acre minimum which is mandated by the state for the creation of any new EFU parcels. The development pattern in the area, particularly at the site of the subject property, is not optimal for the traditional agricultural operations that the EFU zone is intended to promote. The proposed change is more appropriate in an area with this characteristic, as opposed to other areas subject to EFU zones, since many of the EFU parcels in the area are already legally substandard sized parcels. Airport Road NE and Keil Road NE will provide additional buffers between the proposed uses and surrounding agricultural uses. This further ensures that compatibility will exist between the airport development and resource uses. The Aurora Airport, an airport use in a P zone, has existed for many years with little significant impact on the surrounding parcels, most of which are zoned EFU. The Board finds that MCZO 123.060(b) is satisfied.

(c) Adequate public facilities, services, and transportation networks are in place, or are planned to be provided concurrently with the development of the property; and

The Board finds that the evidence in the record demonstrates that there are existing public facilities, services, and transportation networks in place. No new public facilities, services, or transportation networks are necessary for this application. The Board hereby incorporates its findings above for exceptions to Goals 3 and 14 regarding public facilities and services. As conditioned, MCZO 123.060(c) is met.

(d) The other lands in the County already designated for the proposed use are either unavailable or not as well suited for the anticipated uses due to location, size or other factors; and

EXHIBIT M

It is essential for this use to be located on lands adjacent to or within an airport. Also, Applicant's use depends on the ability to quickly dispatch its equipment and personnel into the field, either directly from this airport or to/from PDX, which requires relative proximity to I-5 and as short a distance as possible to PDX. This specific site offers several unique amenities that cannot be duplicated by any city, rural community, or airport in the state. The Aurora Airport is the location of the supplier, repair service provider, and engineer of the Applicant's specially designed tail rotor blades: Metal Innovations, Inc. Metal Innovations, Inc. is the only company in the world that supplies this product and service for the Applicant. This is not only important for operations efficiency, but also for reducing energy and transportation costs associated with shuttling parts to and from Metal Innovations, Inc.

In addition, there are significant strategic advantages to Applicant in being located near the Applicant's two competitors: Columbia Helicopters, Inc. is located within the Aurora Airport, and Evergreen Helicopters, Inc. is located at the McMinnville Airport. Included in those advantages is proximity to the human resource pool of specially trained mechanics that has the expertise necessary to perform the service and repairs needed at the Applicant's proposed facility. The center of that pool is in the Aurora area because of the presence of the Applicant's two competitors.

Applicant may also be able to take advantage of the "Through the Fence" program offered at the airport. This would allow Applicant direct access to the airport facilities from the subject property. No other airport in Marion County is currently authorized under the "Through the Fence" legislation to offer this program.

Lastly, the Applicant has the financial advantage that it owns the subject property already. There is no other property in the county, or for that matter the state, that provides all these necessities and benefits. Other airport users will benefit from the repair services that Applicant can offer as well.

Because of the size and weight of the equipment that Applicant uses in its business, it would be a great burden on both the county's and state's road infrastructure, as well as the Applicant's operating costs, to locate any distance away from an airport. Transportation to and from airport property for purposes of dispatching or repairs could cause excessive wear and tear on the roadways. Additionally, transportation of this equipment could cause delays to the users of the road system by impeding the flow of traffic due to slow moving transports. The costs and energy necessary to move the equipment from a remote location to airport property would be a substantial, inefficient, and unnecessary burden. Finally, the storage and uses that are proposed are most compatible when surrounded by other airport uses. Industrial uses are the only other uses that would be somewhat compatible with Applicant's proposed use. Even if another, suitable property were to exist somewhere in the county, to isolate this use from other airport uses, and to instead site it around other industrial users would negate the necessary benefits of allowing this use to be sited adjacent to an airport, and would consume valuable industrial land, which could be more effectively utilized by another, non-airport user. The findings above regarding the alternative sites analysis for the Goal 3 exception are hereby incorporated. MCZO 123.060(d) is satisfied.

(e) If the proposed zone allows uses more intensive than uses in other zones appropriate for the land use designation, the new zone will not allow uses that would significantly adversely affect allowed uses on adjacent properties zoned for less intensive uses.

The "Public" zone is the only zone appropriate to implement the "Public" land use designation. The airport overlay zone, which already applies to the subject property, further restricts the development

standards which apply to the subject property. This proposed use and uses available under the zone will not adversely affect neighboring agricultural uses for the reasons found above justifying the proposed Statewide Goal exceptions and comprehensive plan amendment. Nevertheless, since there is no other zone which is appropriate for this land use designation, the Board finds this criterion inapplicable to this application.

MCRZO CHAPTER 176 – LIMITED USE OVERLAY ZONE

48. To satisfy the requirements for a reasons exception to Goal 3, the Applicant has requested that the use be limited to the following uses: helicopter uses, services, maintenance, offices, repair, overhauling, and other uses associated with the helicopter business. MCRZO 176.010 states the purpose of the limited use overlay zone is:

To reduce the list of permitted or conditional uses in a zone to those that are suitable for a particular location. . . . The zone may be applied to comply with use limitations for a goal exception required by OAR 660.004. It is the intent that the maximum number of acceptable uses be permitted so that the use of the property is not unnecessarily limited.

49. The Board finds that Applicant's proposed limited use overlay zone is consistent with MCZO 176.010.

CONDITIONAL USE

50. *Under MCZO 119.070, before granting a conditional use, the Director, Planning Commission or Hearings Officer shall determine:*

(a) That it has the power to grant the conditional use;

(b) That such conditional use, as described by the applicant, will be in harmony with the purpose and intent of the zone;

(c) That any condition imposed is necessary for the public health, safety or welfare, or to protect the health or safety of persons working or residing in the area; or for the protection of property or improvements in the neighborhood.

51. Under MCZO 119.100 the director has the power to forward a conditional use application directly to the hearings officer or planning commission for the initial decision. In this instance, the conditional use application was made a part of the comprehensive plan amendment and zone change application. The application was heard by the Hearings Officer. The Hearings Officer recommended to the Board that the application be approved with conditions.

52. Applicant is seeking a conditional use for airport related uses in the Public zone, which are industrial in nature. Industrial uses are allowed in the P zone as a conditional use pursuant to MCZO 171.030(A) and subject to meeting specific criteria. Applicant has the burden of proving compliance with all applicable criteria.

53. The purpose and intent of the P zone is to provide regulations governing the development of lands appropriate for specific public and semi-public uses and to ensure their compatibility with adjacent uses. Furthermore, the zone is intended to be applied to individual parcels shown to be an

EXHIBIT M

appropriate location for a certain public or semi-public use. MCZO 171.010.

The Aurora State Airport is the busiest state owned airport in Oregon. All land supporting airport related uses is designated P. The proposed uses are essentially the same as uses that have long-existed in the adjacent airport and accordingly have been deemed consistent with the purpose of the P zone. One of Applicant's major competitors, Columbia Helicopters, is located in the P zone on the north end of the Airport. As discussed above, the airport needs to expand to adequately serve those that currently use the facilities, and those that are anticipated to use the facilities in the future. The Marion County Comprehensive Plan shows that the subject property is acceptable for airport expansion under private ownership. Applicant's proposed airport related uses would be located adjacent to other P zoned property and would provide needed support to and area for expansion of the airport facility. Airport and airport related industrial uses are conditional uses in the Public zone. Developing under the applicable development standards found in both the P zone and the airport overlay zone will ensure that the resulting use and development will be consistent with the purpose and intent of the P zone, and the surrounding area. The Board finds MCZO 119.070(b) is satisfied.

54. The Board has imposed conditions under this approval, and the Board finds that such conditions are necessary for the public health, safety or welfare, or for the protection of health and safety of persons working or residing in the area or to protect the property or improvements in the neighborhood.

PUBLIC ZONE

55. MCZO 171.040 provides:

(A) New commercial uses in conjunction with public uses may be established up to a maximum of 3,500 square feet of floor area.

(B) Lawfully established commercial uses existing as of the date of adoption of this ordinance up to 3,500 square feet of floor area, or an additional 25% of the floor area that existed as of the date of adoption of this ordinance, whichever is greater.

(C) Airport related uses located at the Aurora Airport are not subject to the size limitations in (A) and (B) of this section.

(D) Except as established in (B), for commercial use to exceed the square foot limitations requires taking an exception to Goal 14. Such exception shall be processed as an amendment to the Marion County Comprehensive Plan.

56. The Boards finds Applicant's proposal is for an airport-related industrial use, accordingly the Board finds that MCZO 171.040 does not apply to this application. If Applicant's use were ever deemed commercial in any way, the Board finds that the use is an airport related use located at the Aurora Airport, therefore, pursuant to MCZO 171.040(C), the size limitations of MCZO 171.040 (A) and (B) do not apply. In addition, the Applicant has demonstrated compliance with the requirements for taking an exception to Goal 14.

57. MCZO 171.060 provides the property development standards in the P zone. At the time Applicant submits application for building permit, these standards shall apply:

EXHIBIT M

(A) HEIGHT. No building or structure in a P zone shall exceed 6 stories or 70 feet, provided that buildings or structures shall set back from every street and lot line 1 foot for each foot of height of the building in excess of 35 feet in addition to all other yard and set back requirements herein specified.

(B) FRONT YARD. Front yard shall be a minimum of 20 feet. No parking shall be permitted within the minimum front yard area.

(C) SIDE YARDS. Where the side of a lot in a P zone abuts upon the side of a lot in any "R" zone, there shall be a minimum side yard of 10 feet. Otherwise there shall be no minimum side yard setback. Where the side of a lot abuts upon a street there shall be a minimum side yard of 20 feet wherein on parking shall be permitted.

(D) REAR YARD. In a P zone there shall be a rear yard that shall have a minimum depth of 30 feet.

(E) LOT AREA AND COVERAGE. The minimum requirements in P zones for dwellings shall be 1 acre except 6,000 square feet inside an unincorporated community boundary where public sewer and water service are provided. No main building, including dwellings, shall occupy more than 30% of the lot area.

(F) OPEN STORAGE.

(1) All yard areas, exclusive of those required to be landscaped as provided in Section 171.060(G), may be used for materials and equipment storage areas related to a use permitted in the P zone, provided such area is screened so it cannot be seen from public roads, or from dwellings on property in other zones.

(2) The surface of open storage areas, including automobile and truck parking area shall be paved or graveled and maintained at all times in a dust-free condition.

(G) LANDSCAPING. The area within 20 feet of a street shall be landscaped. As a condition of approval for a conditional use additional landscaping may be required if necessary to make the use compatible with the area.

(H) PERFORMANCE STANDARDS. No land or structure shall be used or occupied unless maintained and operated in continuing compliance with all applicable standards adopted by the Oregon Department of Environmental Quality.

(I) SEWAGE DISPOSAL. Demonstrate that the development will not exceed the existing carrying capacity of the local sewage disposal system or has an on-site sewage disposal site approved by Marion County of the Department of Environmental Quality.

(J) TRAFFIC ANALYSIS. Demonstrate that the development will be consistent with the identified function, capacity, and level of service of transportation facilities serving the site. A transportation impact analysis, approved by the Marion County Department of Public Works, may be required prior to building permit approval.

58. The Board finds that the proposed facility will feasibly meet the requirements of (A) - (E) above. At 27.48 acres the subject parcel is large enough to accommodate the development standards of

EXHIBIT M

height, parking requirements, yard requirements and lot area coverage. The proposed structure is 126,000 square feet, well below the 30% occupancy maximum in the zone. As a condition of approval, the Applicant shall comply with the development standards in MCZO 171.060 (A) - (E). As conditioned, the application will satisfy MCZO 171.060 (A) through (E).

59. Storage is a large component of Applicant's business. The Applicant will be allowed to use outside storage areas but the storage area must be screened so that it cannot be seen from public roads or dwellings on properties in other zones and the open storage area must be paved or graveled and maintained in a dust-free condition. As conditioned, the application will satisfy MCZO 171.060(F).

60. Applicant will be required to landscape any area that is within 20 feet of a street. As conditioned, the application will satisfy MCZO 171.060(G).

61. Applicant will be required to comply with all applicable DEQ standards regarding structures. As conditioned, the application will satisfy MCZO 171.060(H).

62. Applicant will have an on-site sewage disposal system and will be required to comply with Marion County or DEQ regulations regarding such systems. As conditioned, the application will satisfy MCZO 171.060(I).

63. In light of Applicant's proposed site plan, facility, and improvements, the subject property's size and location, and the existing facilities that will serve the property, the Board finds that MCZO 171.060(F) – (G) can feasibly be satisfied by Applicant's proposed facility.

64. Under MCZO 171.060(J) the DPW may require a traffic impact analysis (TIA). A TIA was required as part of this application and was provided by Applicant's traffic engineer, in coordination with DPW.

The TIA is included in the record, and its assumptions and conclusions are incorporated into these findings by this reference. The Board agrees with the conclusions and assumptions reached in the TIA. The TIA assumed a cap of 70 employees regularly scheduled on the site at one time. The Board has conditioned this approval accordingly. The conclusion reached by the TIA was that the intersections of Ehlen Road with OR 551 and with Airport Road currently do not meet operation standards and that proposed use will increase traffic by less than 2% to the intersections. Both intersections have improvements slated, either by ODOT, the county, or the city of Aurora. The Applicant's traffic engineer, county engineering staff, in coordination with ODOT, concluded that the Applicant should be required to contribute a proportionate share to the slated improvements. This approval is conditioned on Applicant making such contributions. In addition, the Applicant's traffic will have a 1.5% impact on the intersection of Keil Road and OR 551. Like the previous two intersections, this intersection is under ODOT jurisdiction. ODOT did not require improvements or proportionate share contributions. Nevertheless, the Applicant coordinated with county engineering staff to determine Applicant's impact on the intersection. The Applicant is required to accordingly make a proportionate share contribution to the impacted left-hand turn lane at that intersection as well.

65. So long as Applicant's building permit application does not generate more than 70 employees being regularly scheduled at one time at the site, the Board concludes that a new traffic impact analysis will not be required for issuance of the building permit.

As conditioned, the application satisfies MCZO 171.060(J).

EXHIBIT M

AIRPORT OVERLAY ZONE

66. MCZO Chapter 177 provides the airport overlay zone. MCZO 177.010 provides:

> The Airport Overlay Zone is intended to minimize potential dangers from, and conflicts with the use of aircraft at public airports based on the adopted master plans for each airport. It is to be used in conjunction with the underlying zone. If any conflict in regulation or procedure occurs with the underlying zoning districts, the more restrictive provisions shall govern. This section is intended to comply with Federal Aviation Agency Regulation FAR-77 and all other applicable federal and state laws regulating hazards to air navigation.

67. MCZO 177.030(a) discusses use limitations within airport development districts. The Board finds that Applicant's proposed use is consistent with the use limitations contained in MCZO 177.030(a). Those regulations of MCZO 177.030(a), (b), and (c) relating to structures on the subject property shall be enforced at the time of building permit application, and this approval is conditioned on the compliance of Applicant's building permit application with those restrictions. The Board finds such restrictions can be feasibly met by this application.

68. MCZO 177.040 discusses the procedure for obtaining a building permit regarding structures in the Airport Overlay Zone. Applicant will be required to comply with those requirements when seeking a building permit. As conditioned, MCZO 177.040 will be satisfied.

EXHIBIT M

EXHIBIT B

The Marion County Board of Commissioners adopts the following conditions in ZC/CP/CU09-5/US Leaseco Inc..

CONDITIONS OF APPROVAL:

Pursuant to the Marion County Zone Code 17.123.070, the following conditions apply to the P-LU (Public – Limited Use Overlay) zoning granted in this action. These conditions are reasonably related to the specific development proposed, will serve the public interest of reducing land use conflicts, and are based upon standards adopted by the County. The P-LU zoning significantly intensifies the use of the land. The conditions are necessary for the public health, safety and welfare.

1. Prior to issuance of building permits, the applicant shall provide evidence of compliance with Marion County Public Works conditions and requirements.

2. Access permits are required for any new access or change in use of the existing access to the public right-of-way. No new direct access will be permitted to Airport Road other than for the purpose of emergency vehicle access only.

3. Driveways will need to meet fire district standards for emergency access.

4. Site grading shall not impact surrounding properties, roads, or drainage ways in a negative manner. Construction of improvements on the property shall not block historical or naturally occurring runoff from adjacent properties. The applicant will be required to submit a site drainage plan to demonstrate this lack of negative impact.

5. Any work in the public right-of-way will require a permit from Public Works. OR 551 is under the jurisdiction of ODOT. The applicant shall provide proof to DPW that it has met ODOT's requirements. As traffic from the proposed use may impact the City of Aurora, the applicant shall provide proof to DPW that it has complied with the City's requirements.

6. The applicant shall dedicate sufficient right-of-way for a 30-foot property radius corner at the southeast corner of 22265 Airport Road NE. Dedications shall be made to the public and not to Marion County.

7. A limited use (LU) overlay shall apply. Only the following uses are allowed: helicopter uses, services, maintenance, offices, repair, overhauling, and other uses associated with the helicopter business.

8. No more than 70 employees shall be regularly scheduled to be at the site at one time. In the event Applicant proposes more than 70 employees to be regularly scheduled at the site at one time, Applicant shall provide to the County a new Traffic Impact Analysis and the resulting traffic impacts shall be mitigated. On or before January 31 of each year, Applicant shall provide to the Marion County Planning Department a report of the typical number of employees on the subject property during each month of the preceding calendar year.

EXHIBIT M

9. The applicant shall pay a proportional share for the identified mitigation measures at the intersections of Ehlen Road and Airport Road, OR 551 and Ehlen Road, OR 551 and Keil Road, and Airport Road and Keil Road.

10. Applicant shall provide a civil site plan along with a traffic circulation plan prior to the issuance of building permits.

11. The applicant shall improve Airport Road NE and Keil Road NE along their frontages to the satisfaction of DPW. The improvements shall be on engineering plans and the applicant will be required to submit the engineering plans prior to commencement of any work on the project.

12. Prior to building permit approval, the applicant shall provide a Declaration of Covenants for Road Maintenance Agreement for any non-county maintained access easements.

13. Site grading shall not impact surrounding properties in a negative manner. Prior to the issuance of permits the applicant shall provide a site drainage plan demonstrating that there are no negative impacts.

14. The applicant shall preserve and protect all nearby roads and ditches to the satisfaction of DPW. Failure to preserve and protect the road and ditches may result in the applicant being responsible for repairing the damage at applicant's expense.

15. A National Pollutant Discharge Elimination System (NPDES) permit is required for all construction activities that disturb one-acre or more. The NPDES permit is obtained through the Oregon Department of Environmental Quality. The applicant shall provide proof of issuance of the NEPDES permit.

16. Storm water detention facilities are in place but need to be modified. The system shall be sized so that it will detain the difference between a 5-year frequency storm with predevelopment conditions and a 10-year frequency storm with development conditions. Storm drainage improvements shall be to DPW specifications. A storm drainage plan shall be submitted prior to the issuance of any building permits and an acceptable drainage and detention system must be in place be for the final building inspection.

17. Applicant shall provide a water system report showing the proposed system includes pumping capacity or reservoir storage capacity for fire flow quantity and pressure. The water system report shall be approved by Marion County and the applicable fire district, prior to building permit approval.

18. The applicant shall comply with the provisions of MCZO171.060 regarding property development standards for the public zone.

19. The applicant shall comply with the provisions of MCZO177.030 and MCZO 177.040 regarding use limitations and procedures for building permits in an airport overlay zone.

EXHIBIT M

EXHIBIT C

The following described property is rezoned from EFU (Exclusive Farm Use) to P-LU (Public - Limited Use Overlay) zone. ZC/CP/CU09-05/US Leaseco Inc.

Re: December 23, 2024 Comment Letter on Behalf of Aurora Airport Improvement Association and TLM Holdings, LLC, Regarding the Aurora State Airport Master Plan – ODAV Proposed Preferred Alternative

Mr. Thomas, Mr. Beach and Ms Steffen,

This letter is written on behalf of the Aurora Airport Improvement Association (AAIA), whose members include Aurora Airport aviation private business stakeholders, and one of AAIA's members TLM Holdings, LLC, who is also a PAC Member, together referred to herein as "Aeronautical Stakeholders". Please include this letter in the record for the Oregon Department of Aviation's (ODAV) proposed "Preferred Alternative" for the Aurora State Airport Master Plan. We applaud Director Sugahara's statement that ODAV understands that the "Preferred Alternative" for the Aurora Airport Master Plan is widely opposed and his commitment that ODAV is willing to modify it. It is mission critical that ODAV modify the "Preferred Alternative" if the Aurora Airport is to continue to deliver significant tax benefits, family wage jobs, emergency resiliency and aeronautical innovation to the region and state. The current version of ODAV's proposed Preferred Alternative is inconsistent with these objectives.

EXECUTIVE SUMMARY OF REQUESTS

The Preferred Alternative should be modified to reflect the Aeronautical Stakeholders' Alternative that was previously submitted and that is attached (Exhibit 1) in an updated, annotated form. The attached Aeronautical Stakeholders Alternative is consistent with ODAV's stated wishes to extend the runway by 500 feet to the north and move the airport toward FAA design standard compliance. A significant difference between ODAV's current Preferred Alternative and the Stakeholders' Alternative, however, is that the Stakeholders' Alternative does not

carry ODAV's $150 million (plus) price tag to condemn the Aurora Airport front line aircraft hangars for which the owners have invested more than $200 million and thereby created millions in tax revenue, created more than a 1000 good jobs and millions of dollars in direct and indirect tourist revenue for surrounding communities. ODAV's final Preferred Alternative must:

1. Remove the taking of the frontline hangars and remove the "Aeronautical Reserve" designation across the rest of the privately owned property at the airport.
2. Remove the proposed new taxi lane that isn't required by the FAA and makes no aircraft safety, efficiency or policy sense.
3. Remove the new commercial service road adjacent to the proposed new taxiway that also isn't required by the FAA. Replace it with the internal service road that was approved in the 2012 Master Plan and that as shown on the Stakeholders' Alterative is partially built and would cost ODAV nothing but the cost of some pavement.
4. Leave the drainfields in place because when improved, they are allowed in the RSA and are essential to the continued functioning of the airport. ODAV should simply require HDSE to bring the South Drainfield to meet FAA Design Standards.
5. Be developed in a collaborative in-person meeting that allows real discussion among stakeholders to occur to work out details so that the "Preferred Alternative" that emerges enables the airport to be successful and safe over the next 20 years and avoids needless, years-long litigation continuing the airport's languishment from neglect.

EXPLANATION

ODAV is Bound by ORS 836.640-642

ODAV must understand that it is bound by ORS 836.640-642, which is a statute developed by Business Oregon and adopted by the legislature to strongly encourage private investment at the Aurora Airport and that commanded ODAV to carry out that objective. ODAV's "Preferred Alternative" is in direct contravention of those statutes. The Aeronautical Stakeholder's Alternative (Exhibit 1) is consistent with that statute and reflects good aviation policy and safety.

Contrary to that statute, ODAV's proposed alternative contemplates ODAV taking by eminent domain the frontline hangars at the airport and authorizes for public acquisition all other private property at the Aurora Airport. ODAV's plan to wipe out the front line aircraft hangars has an unnecessary and staggering $150 million plus public price tag. It unwisely seeks to bulldoze these important business aircraft hangars for which the owners have invested more than $200 million,

created millions in tax revenue, more than a 1000 good jobs and millions in directly and indirectly related tourist revenue for surrounding communities, with ORS 836.640-642 as the catalyst. It anomalously designates areas that have been set aside in airport master plans for private airport related development since 1976, as areas for ODAV acquisition instead of planning for them to be developed with private airport related uses by bringing them into the airport boundary as contemplated by ORS 836.640-642.

Both elements of the preferred alternative are misguided. Among other objectives for the Aurora Airport, ORS 836.642 requires ODAV to "Preserve investments [at the Aurora Airport] and the level of service provided by [the Aurora Airport]" and to "promote economic development" at Aurora "by creating family wage jobs, increasing local tax bases" through support of private aviation-related uses so that they may "develop and thrive." The preferred alternative is contrary to ORS 836.640-642 and expressly seeks to trade the private investment that the statute seeks to encourage and grow, for government condemnation and government ownership.

ODAV's Preferred Alternative Gambles with the Aurora Airport's Success, Risking Sending it Backwards and Making it Less Safe

ODAV's preferred alternative gambles with the economic benefits that private investment at the airport has delivered, risking their continuation. The threat of ODAV condemnation, not to mention ODAV actually engaging in such litigation against those owners, presents an unacceptable risk of driving away not only those aircraft hangar owners, but also their businesses, jobs and related tax and tourist revenue. Once they are gone, the stigma of such ODAV action makes the airport and indeed any airport that ODAV manages, a private investment pariah – potentially for decades. Such a risk should not be taken where, as here, a state statute commands ODAV otherwise and there are alternatives. The Stakeholders Alternative demonstrates that viable alternatives are available that carry a fraction of the cost of ODAV's preferred alternative and come with none of the risks.

It is respectfully submitted that the justification for ODAV's "preferred alternative" does not warrant its deleterious effects.

ODAV's Desire for a Vehicle Service Road (VSR) and New Taxiway Cannot Justify ODAV's Preferred Alternative. ODAV has Failed to Consider Better and Less Costly Alternatives for a VSR and new Taxiway

ODAV's desire for a "vehicle service road" (VSR) and a new aircraft taxiway are driving ODAV's desire to condemn the frontline hangars. But neither objective necessitates ODAV's Preferred Alternative, and neither are required by FAA. In

fact, if FAA were doing its job, it would be advising ODAV against both on their astonishing cost alone.

Regarding the VSR, the airport's 2012 master plan approved a VSR that has none of ODAV's Preferred Alternative's deleterious effects and does not carry a $150 million condemnation price tag. At worst, the 2012 VSR costs the state some pavement. The private aeronautical stakeholder owners have offered ODAV the land needed for the 2012 MP VSR free of charge. We are unaware of any reason for ODAV to not pursue that 2012 MP VSR and there are only good reasons to do so. **Let that sink in: ODAV's current "Preferred Alternative" seeks to trade $150 million of the public's money, risk more than 1,000 jobs, millions in tax and tourist revenue just to save some $20,000 on pavement.** The idea is untenable, not to mention unacceptably wasteful and wholly unnecessary.

Similarly, if a new taxiway is required (and ODAV has not shown that it is), ODAV has utterly failed to explore reasonable options for such a new taxiway. ODAV says that it cannot put a new taxiway anywhere but where the ODAV "Preferred Alternative" puts it because ODAV does not own land elsewhere for a taxiway. This is insincere and disingenuous. ODAV **does not own the land where it wants the "Preferred Alternative" taxiway either** – that is why it is showing ODAV condemning the front line hangars. Moreover, many other features of ODAV's proposed alternative are on land ODAV does not own. ODAV simply has made no effort to come up with a less devastating and less expensive alternative. Even if ODAV had to acquire some private land for a new taxiway, ODAV can and must explore alternatives having far less adverse impact on the continuation and growth of private aeronautical investment at the airport, not to mention a price tag well south of the $150 million plus for ODAV's Preferred Alternative.

ODAV Does not "Want" to Expand the Airport Boundary

ODAV asserts that it simply does not "want" to extend the airport boundary to include the land that is now and has long been foreseen for private airport-related development. Instead, ODAV wants to designate that land for ODAV acquisition claiming that only this will "ensure" that land is put to aeronautical use. This claim cannot be insincere and is disingenuous. ODAV acquisition does nothing to put land at the airport to aeronautical use. Further, the private sector has put all of the land that it could into airport related uses and has been trying to put the rest to aeronautical use with no help from ODAV. Per ORS 836.640-642, the way ODAV ensures that land is developed with aeronautical use, is to expand the airport boundary to include such land. ODAV ownership does nothing to further that goal. Instead, as commanded in ORS 836.640-642, ODAV must expand the airport boundary to include the remaining undeveloped land at the airport that has been designated i*n every master plan since 1976 as suitable for airport development*. Not "wanting" to do so is no justification and is contrary to ORS 836.640-642.

ODAV Has Failed to Meaningfully Engage Airport Stakeholders in the Development of Airport Alternatives

Contrary to the federal requirements cited in prior submittals, ODAV has failed to meaningfully engage airport stakeholders in ODAV's process for developing the "Preferred Alternative."

ODAV has improperly insisted upon remote meetings only, where it mutes speakers when ODAV is done hearing from them, but allows ODAV and its consultants to speak without limits, including to break into discussions by stakeholders, undermine stakeholder points, and failing to allow any discussion or iterative response.

ODAV has to date completely failed to consider the Airport Stakeholders' Alternative and has given no rational reason for failing to adjust the airport boundary to support airport related development. ODAV has insisted upon PAC members being locked in stone, despite PAC members designating legal counsel and others to participate as their representative. ODAV has even insisted upon deceased persons holding precious aviation-stakeholder PAC member seats.

The lack of any sincere ODAV effort at engagement is well-illustrated by the fact that 13 minutes before the close of business on Friday December 19, the last business day before the close of the final ODAV "Preferred Alternative" comment period, ODAV's consultant for the first time responded to an important issue raised at the December 10, 2024 "PAC" meeting, proving a link and inviting PAC members to review the materials at the link. That link led to completely unhelpful further links leading to materials dozens of pages in length. Clearly, ODAV had no interest in the Aviation Stakeholders' concerns and even less interest in a meaningful response from the stakeholders on the issue.

The underlying issue was and is an important one. It involves ODAV's "Preferred Alternative" eliminating with no reasonable alternative, the HDSE septic drain field that is critical to the continued viability of the private development (and jobs) at the airport. The airport stakeholders have provided undisputed evidence that the HDSE drainfield can be strengthened to meet FAA standards to remain in the RSA. ODAV responded on December 10, 2024 with vague, unsupported claims that the drainfield must be removed. The links provided by ODAV's consultant at 4:47 pm on December 20, 2024 do not demonstrate what, if any, problem it is that ODAV has with the stakeholders' supporting information for the drainfield to be improved and remain in place. If there is an issue, ODAV should engage with the Stakeholders to discuss it. Clearly, a drainfield is essential to support the airport's good jobs and the businesses that go with them. Ostensibly ODAV would have an interest in preserving those economic attributes and discussing, in a meaningful way, how the drain field can be improved to remain in

place consistent with FAA standards. Assuming ODAV has such an interest – and ORS 836.640-642 compels ODAV to have such an interest, ODAV should meet with the stakeholders to work the issue out. It will not be particularly hard or time consuming to do so.

FAA Admits that the Runway Can be Extended, that an MOS Can be Approved and that the Master Plan need only Show Incremental Movement toward FAA Design Standard Compliance

On December 10, 2024 FAA admitted that (1) it can approve a MOS, (2) that the runway can be extended on a MOS, and (3) that the master plan need only show progress toward meeting FAA design standards. Airport Planner Aron Faegre has submitted comments this date explaining that the MOS for the runway extension can not only be approved but it in fact must be shown on the ALP- as it was shown on the approved 2012 ALP. We join those comments. There is no reason for the Preferred Alternative to continue to hold the runway extension hostage to Hwy 551 moving 30 feet (or however far ODAV wants it to move) west. Moving Hwy 551 can occur later when and if funding for the same is provided. That is what the law says. That is what the master plan should contemplate. Importantly, that is the only truly safe way forward.

Need for a Meaningful Meeting to Discuss a Tenable Preferred Alternative for the Aurora Airport

Given the success of the airport and the commands of ORS 836.640-642, ODAV's approach to the development of the "Preferred Alternative" to date is nothing short of puzzling. The master plan has a 20-year planning horizon and should ensure Aurora Airport's continued growth and success over that horizon. ODAV should meet, in person, with the Aeronautical Stakeholders and explore a more normative and economically reasonable preferred alternative that is consistent with ORS 836.640-642. Exhibit 1, the Stakeholder's Alternative, is a good starting point for that discussion.

Thank you for your consideration.

Very truly yours,

Wendie L. Kellington

Alex Thomas and Anthony Beach,

Please register and make part of the master plan record my very strong objection to the "taking" of any privately owned hangars on the Aurora Airport.

There is a significant shortage of hangars. Destroying hangars with no replacement does not support aviation in Oregon in a positive way. The hangars sited for destruction are all currently providing significant employment. The two motivations for the proposed destruction can
be solved in a better way: either 1) a vehicle perimeter road would work much better and separate vehicle and aircraft traffic, or 2) ODAV purchasing only 1 acre from a willing seller to build my necessary vehicle lane(s).

I recommend airport safety improvements but only with no destruction of any hangars.

Thank you,
Peter Kincart ATP, CFII

Subject: Concerns Regarding the Proposed Airport Master Plan Alternatives

You don't often get email from aric.j.krause@gmail.com. Learn why this is important

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

Dear ODAV/ Alex Thomas,
I am writing to express my strong concerns regarding the refined preliminary alternatives outlined in the Aurora State Airport Master Plan update. After reviewing the details, I believe several aspects of the plan should be reconsidered due to their potential negative impacts on the surrounding community and existing infrastructure.

1. **Displacement of Residents and Businesses:**
   Both Alternative 1A and 1B involve significant property acquisitions that would displace numerous residential and commercial properties. Specifically, Alternative 1A impacts 13 residential and 4 commercial properties, while 1B impacts 20 residential and 4 commercial properties. This level of displacement creates unnecessary hardship for community members and disrupts the stability of the area.
2. **Traffic and Infrastructure Strain:**
   Shifting Hubbard Highway, along with realigning roads such as Keil Road, poses risks of increasing traffic congestion and disrupting existing transportation networks. These changes could have long-term repercussions for commuters and freight traffic.
3. **Issues with Alternative 2:**
   While Alternative 2 avoids shifting Hubbard Highway, it requires relocating key airport infrastructure, including air traffic control towers and segmented circles. Additionally, this alternative necessitates the acquisition of 37 acres for runway alignment, with a total of 105 acres being earmarked for future aeronautical use. The removal and replacement of hangars in this plan would also lead to short-term disruptions for airport operations and long-term inefficiencies for existing tenants. The lack of helicopter parking and limited large aircraft accommodations further suggests this alternative does not fully meet the operational needs of the airport.
4. **Community Engagement and Feedback:**
   While the document mentions public review and feedback, the proposed alternatives suggest

that many community concerns remain unaddressed. A more robust and inclusive engagement process is essential to ensure all voices are heard and considered.

5. **FAA Compliance vs. Community Needs:**
   While I understand the FAA's requirement for compliance with design standards, this must be balanced with the needs and well-being of the surrounding community. Placing undue emphasis on expansion at the cost of local harmony is counterproductive and risks eroding public trust.

I strongly urge you to reconsider these alternatives and explore options that align more closely with the values and priorities of the community. Sustainable growth and thoughtful planning can coexist, but only if the concerns of all stakeholders are taken seriously.

Thank you for your attention to this matter. I would be happy to discuss these concerns further or participate in a forum to work towards more balanced solutions.

As a Commercial Pilot, tenant, CAA Club member, and Van's Aircraft employee my life is very much impacted by this proposal and I am not in support of the options on the table today.

Sincerely,

Aric Krause

We are writing to express our strong objection to lengthening runways and increasing size of aircraft at Aurora Airport. Planes from this airport already take off and land over densely populated areas and this proposal will seriously adversely affect communities in and near the flight path both in terms of noise and quality of life, and also in terms of safety. In addition, the Boone Bridge section of I-5 is already a traffic nightmare and adding traffic to and from the airport is not tenable. We have a more than adequate airport in Portland and the studies do not support the need for this expansion any time in the near future
.
Please take citizens and neighbors concerns into consideration and stop any expansion of Aurora Airport.

Re: Aurora State Airport Master Plan Proposed Preferred Alternative

Mr. Thomas,

Please enter this letter into the record for the Oregon Department of Aviation's (ODAV) proposed "Preferred Alternative" for the Aurora State Airport Master Plan. The Marion County Board of Commissioners support Director Sugahara's statement that ODAV is willing to modify its Preferred Alternative for the Aurora Airport Master Plan. It is important that ODAV explore all options and not just those on the table to ensure the on-going and future success of the Aurora Airport as an economic driver that delivers significant tax benefits, family wage jobs, emergency resiliency and aeronautical innovation to the region and state. The current version of ODAV's Proposed Preferred Alternative is inconsistent with these objectives.

ORS 836.640-642 provides authority for and encourages private investment at the Aurora Airport and provides direction and authority for ODAV to carry out that objective. ODAV's Proposed Preferred Alternatives contemplate significant potential loss of the Aurora Airport front line aircraft hangars for which the owners have invested more than $200 million, created millions in tax revenue, more than a thousand good jobs and millions in directly and indirectly related tourist revenue for surrounding communities.

Against this backdrop, the Proposed Preferred Alternatives anomalously designate areas that have been set aside in airport master plans for airport related development since 1976, as areas for ODAV acquisition instead of bringing them into the airport boundary established by ORS 836.640-642.

ORS 836.642 requires ODAV to "Preserve investments [at the Aurora Airport] and the level of service provided by [the Aurora Airport]" and to "promote economic development" at Aurora "by creating family wage jobs, increasing local tax bases" through support of private aviation-related uses so that they may "develop and thrive." The preferred alternative appears to be in conflict to ORS 836.640-642 and expressly seeks to trade the private investment that the statute seeks to encourage and grow, for government condemnation and ownership.

Concerningly, ODAV's Proposed Preferred Alternatives gambles with the significant economic benefits that private investment at the airport has delivered, risking their continuation. The threat of any future ODAV condemnation presents an unacceptable risk of driving away not only those aircraft hangar owners, but also their businesses, jobs and related tax and tourist revenue.

It is critical to the future of the airport that all alternatives are explored and that all considerations for the existing businesses and the surrounding lands are taken into consideration.

Hi, Mr. Sugahara.

Can you please provide a copy of the dataset used in defining operations levels, aircraft types, etc.? It would appear this is the TFMSC dataset obtained a few years back, and referenced in Table 3-7.

Can you also confirm, is this 'flight plan filings' or ACTUAL 'flown flight plans'? And what way do we have to validate each was actually flown?

Thanks.

Subject: RE: KUAO RDC timeline

Hi Jeff, no problem, happy to help.

Yes it does show existing and future conditions as C-II, but that is because the Critical Aircraft was determined to be C-II (existing) earlier in that 2012 master planning process (Chapter 3 – Forecasting).

From the 2012 Chapter 3 – Forecasts:

"According to the 2000 Airport Master Plan, the planned ARC was B-II, exemplified by the King Air turboprop and the Cessna Citation jet. At that time, ODA decided to constrain the forecast by keeping the airfield ARC at B-II. A runway designed for ARC B-II is adequate for about 45% of the business jets manufactured.

The Airport has now passed the 500 operations threshold for Aircraft Approach Category C, so the current ARC should be C-II.

Aircraft Approach Category C accounts for 701 documented operations in FY 2007 and 390 in FY 2009, resulting in an average of 545 operations. The number of Aircraft Approach Category D airplane operations is negligible, as are operations in Airplane Design Group III.

With more than 500 operations in Aircraft Approach Category C and more than 500 operations in Airplane Design Group II, the appropriate ARC for the Airport is C-II."

It also gives a projected growth rate and that it does not expect the ARC to change in that 20-year planning period, so C-II is kept as the "future" condition on the 2012 ALP.

This section of Chapter 3 above determines that C-II is the Critical Aircraft based on recent actual aircraft operations, and sets the existing condition/design standards for the rest of the plan, including the ALP. The change to C-II did not occur prior to the 2012 master plan.

I hope this helps,

Thanks, Tony. I appreciate the quick and detailed reply.
What confuses is that the actual ALP includes a Table listing both 'existing' and 'future' C-II, right? So, it seems there is an error... either that 2012 signed ALP mis-stated 'existing' as C-II (should have shown B-II?), or there was in fact an upgrade to C-II preceeding Suomi's signature. If such upgrade happened, when was it, and where is the FAA signature copy?
The text you cited appears to come from pg.2 of chapter 4. Contextually, furher down, does that page say the 2007 OAP encouraged an upgrade from B-II to C-II? And, if so, am I correct that the upgrade to C-II therefore happened after 2007?
One more question... what do you have as the FAA approval date for the Master Plan preceding Suomi's 2012 signature, and is a PDF copy available online?
Thanks.

On Tue, Aug 27, 2024, 2:46 PM BEACH Anthony <Anthony.BEACH@odav.oregon.gov> wrote:
Hi Jeff,

From Chapter 4 Facility Requirements of the 2012 Master Plan:

"At this time, ODA has not decided to constrain Aurora State Airport's ability to meet the unconstrained forecasts presented in Chapter Three. Such a decision may occur later. Facility requirements were constrained in the 2000 airport master plan update because ODA made a policy decision to do so. In the 2000 Master Plan update, forecasting determined the Airport Reference Code (ARC) as B-II, which meant that airport design should accommodate light jets and turboprop aircraft, as well as less demanding aircraft types. Unconstrained forecasting projected jet traffic at the Airport would grow so that the future ARC would be C-II, which meant that airport design should accommodate more medium sized jets. ODA made a policy decision to constrain the forecasts by constraining the ARC to B-II. Since then, aircraft activity growth has exceeded both the unconstrained and constrained forecasts in the 2000 master plan update. Current activity has passed the FAA's threshold for the ARC to be C-II. This has been possible because the airfield is adequate for many operators of Aircraft Approach Category C airplanes, even though the Airport does not meet all design standards for ARC C-II. In this current master plan update, ODA will examine the impacts of meeting ARC C-II design standards and of accommodating the unconstrained forecasts from Chapter Three."

The FAA's approval of the 2012 Airport Layout Plan with the ARC as C-II is attached. Since the 2012 ALP was signed, we have examined the impacts and different paths to meeting C-II design standards, including requesting Modification to Standards which were denied. The FAA directed us to evaluate paths to compliance in a new master plan, which we are doing now.

Hi, Kenji.

I am trying to confirm the history of the RDC at KUAO. Specifically, there has to be a document where FAA signed off growing from B-II to either C-I or C-II.

Would you please have an ODAV person check the records and advise the date and name of signatory FAA official? Even better, can you send a PDF copy of the packet with approval and ALP)or link to a copy online?

Thanks.

Hello Councilor Linville,

Thanks so much for reaching out. Yes, you're correct that tomorrow night's PAC meeting will be focused on reviewing each of the preliminary alternatives. We've extended the meeting by an hour (5:00-8:00 pm) to give plenty of time for committee members to ask questions and get clarity on the details before providing feedback to ODAV. I'll pass along your idea for a matrix to show the differences between the alternatives.

Regarding the public information, we will have the public open house on Thursday of this week where we'll be able to walk people through those details and answer their questions. We'll also post the materials on the website, along with a comment form, for anyone that can't attend on Thursday.

I hope that helps answer your questions, but please let me know if you have any other questions or concerns.

Thanks,
Brandy

Brandy - the supplied "Preliminary Alternatives" document is really insufficient to adequately prepare for the upcoming PAC meeting. There does not appear to be adequate and comprehensive analyses of each alternative including assessments of benefits and constraints of each of the alternatives based on FAA regulations, ODT constraints, land use regulations, ROFA, RSA, RPZ requirements, environmental and community impacts. Will that be provided to the PAC and the general public? Providing a matrix for each alternative including strengths and constraints would be very helpful.

Respectfully,

Hello PAC members – We hope that you will share this with your community or group that you represent. We've also included a postcard that you can share as well. Please reach out if you have any questions. We'd also greatly appreciate you sharing on any social media platforms that you have. Thank you!

The Aurora State Airport Master Plan will host an open house to show preliminary design alternatives and hear feedback on what the future Aurora State Airport could look like in the future. This Open House will be held in person on Thursday, June 13, 2024, between 4:00-7:00 pm in the Commons of North Marion High School, (20167 Grim Rd NE, Aurora, OR 97002)

Please share this information with your friends and neighbors! We would like to talk with as many people as possible and hear community feedback on the preliminary alternatives.

If you can't make the event, don't worry! We'll post all the information on the website and have an online survey for you to provide your thoughts on the draft alternatives (open from June 13-21): https://publicproject.net/AuroraAirport

Hello PAC members,

Just a reminder that we'll see you next Tuesday for our **sixth PAC meeting (VIRTUAL) on Tuesday, June 11, 2024 from 5:00-8:00 p.m.** *(please note this is an hour longer than our normal meeting time).*

Date/Time: Tuesday, June 11, 2024 from 5:00-8:00 p.m.
Topic: The preliminary alternatives will be presented for the Aurora State Airport Master Plan.
Location: Zoom

- PAC members have been registered via Zoom and will get an email directly from Zoom with the login information (please check your junk folder). Please do not forward this email to anyone.

- Others can register for the meeting under their own names at: Webinar Registration - Zoom

Materials are posted on the website: https://publicproject.net/AuroraAirport#

Additionally, we want to remind you of our next public open house, which will be held in-person. **We hope to see you there; please share with your groups/representatives.**

Thursday, June 13, 2024
Drop by between 4:00-7:00 pm
North Marion High School, Commons
(20167 Grim Rd NE, Aurora, OR 97002)

Light refreshments provided; children welcome
Tendremos interpretación en español en la reunión. We will have Spanish interpretation at the meeting.

This meeting will provide an opportunity for neighbors, PAC members, and other interested community members to learn about the Airport Master Plan project. This meeting will present the preliminary alternatives for the Aurora State Airport Master Plan. All written and verbal comments collected during the open house will be included in the event Summary.

Thanks,
Brandy

Re: Aurora State Airport Master Plan Proposed Preferred Alternative

Mr. Thomas,

Please enter this letter into the record for the Oregon Department of Aviation's (ODAV) proposed "Preferred Alternative" for the Aurora State Airport Master Plan. We support Director Sugahara's statement that ODAV is willing to modify its Preferred Alternative for the Aurora Airport Master Plan. We believe that it is important that ODAV do so, to enable the airport to continue to deliver significant tax benefits, family wage jobs, emergency resiliency and aeronautical innovation to the region and state. The current version of ODAV's proposed Preferred Alternative is inconsistent with these objectives.

ODAV is bound by ORS 836.640-642 which was developed by Business Oregon. That statute strongly encourages private investment at the Aurora Airport and commands ODAV to carry out that objective. Contrary to that statute, ODAV's proposed alternative contemplates ODAV taking by eminent domain the Aurora Airport front line aircraft hangars for which the owners have invested more than $200 million, created millions in tax revenue, more than a 1000 good jobs and millions in directly and indirectly related tourist revenue for surrounding communities, with ORS 836.640-642 as the catalyst.

Against this backdrop, the "Preferred Alternative" anomalously designates areas that have been set aside in airport master plans for airport related development since 1976, as areas for ODAV acquisition instead of bringing them into the airport boundary established by ORS 836.640-642 for development for airport related uses and wipes out the front line hangars.

Both elements of the preferred alternative are misguided. Among other objectives for the Aurora Airport, ORS 836.642 requires ODAV to "Preserve investments [at the Aurora Airport] and the level of service provided by [the Aurora Airport]" and to "promote economic development" at Aurora "by creating family wage jobs, increasing local tax bases" through support of private aviation-related uses so that they may "develop and thrive." The preferred alternative is contrary to ORS 836.640-642 and expressly seeks to trade the private investment that the statute seeks to encourage and grow, for government condemnation and ownership.

Concerningly, ODAV's preferred alternative significantly gambles with the significant economic benefits that private investment at the airport has delivered, risking their continuation. The threat of ODAV condemnation, not to mention ODAV actually engaging in such litigation against those owners, presents an unacceptable risk of driving away not only those aircraft hangar owners, but also their businesses, jobs and related tax and tourist revenue. Once they are gone, the stigma of such ODAV action could make the airport and indeed any airport that ODAV manages, a private

investment pariah for decades. Such a risk should not be taken where, as here, a state statute commands ODAV otherwise and there are alternatives.

It is respectfully submitted that the justification for the "preferred alternative" simply does not justify its deleterious effects. ODAV is on record stating that these harmful consequences only flow from ODAV's desire for a "vehicle service road" (VSR) and a new aircraft taxiway. But neither necessitates the preferred alternative.

Regarding the VSR, the 2012 master plan approved a VSR that has none of the Preferred Alternative's deleterious effects and does not carry a $200 million condemnation price tag. At worst, the 2012 VSR costs the state some pavement. Moreover, we are advised that the private aeronautical stakeholder owners have offered ODAV the land needed for the 2012 MP VSR free of charge. We are unaware of any reason for ODAV to not pursue that 2012 MP VSR and we can only see good reasons to do so.

We are further advised that there are alternatives for a new taxiway that ODAV has not explored. We understand that ODAV has not explored any such alternatives because it does not own the land needed for a taxiway to be located elsewhere. However, so far as we know this has never been an impediment previously to the development of the Aurora Airport and should not be an impediment now. Many features of the proposed alternative are now contemplated on land that ODAV does not own – including the taking of the frontline hangars. Even if ODAV had to acquire some private land for a new taxiway, ODAV should explore such alternatives having the least adverse impact on the continuation and growth of private aeronautical investment at the airport, not to mention a price tag well south of the $200 million under the Preferred Alternative. Finally, we are advised that ODAV simply does not "want" to extend the airport boundary to include the land that is now and has long been foreseen for airport-related development in the airport boundary. Such a justification if true, would obviously be contrary to ODAV's mission and responsibility to enable the Aurora Airport to grow with aviation-related uses.

We are frankly perplexed by these problems given the success of the airport and the commands of ORS 836.640-642. ODAV should be eager to develop a master plan that ensures the Aurora Airport's continued growth and success over the master plan's 20-year horizon. If these problems that risk sending the airport backwards by decades arise from a lack of meaningful airport stakeholder engagement in the development of the preferred alternative, then ODAV should meaningfully engage. But whatever the reason, we strongly encourage ODAV to dismiss the Preferred Alternative and to meet with the airport stakeholders and to explore a more normative and economically reasonable preferred alternative that is consistent with ORS 836.640-642.

Sincerely,

Kory MacGregor
Hangar Foxtrot Owner

Gentlemen,

I am a pilot, flight instructor, and single-engine airplane owner who makes frequent use of Aurora State Airport both for recreation and for training. I am also a member of Columbia Aviation Association which is based at the airport.

I must strongly object to the "taking" or destroying of any privately owned hangars at the airport. There is a significant shortage of aircraft hangars at Aurora airport as well as the rest of the region. Many of the hangars at Aurora airport house businesses that would be significantly impacted or destroyed if said hangars were taken. Even prior to such action, the mere mention of it in any adopted Master Plan would negatively affect their market value and likely lead to loss of employment and related tax revenue.

I urge you to develop a Master Plan that provides needed safety improvements without impacting the above-mentioned hangars or their owners.

Thank you for your time.

Respectfully Submitted,

Philip Mandel

To David Mauk <davidemascent@gmail.com>
Cc Anne Shevlin <a.shevlin@charbonneaucountryclub.com>

Wonderful, thank you for confirming! I'll see you virtually tomorrow.

Are you also able to share the Thursday open house with other residents? We want to make sure people know about the event so they can talk to staff from FAA and ODAV.

Thanks,
Brandy

Hello Anne,

Thank you for letting us know about the change. We will update our records. Please note that we have a virtual PAC meeting on Tuesday, June 11 from 5:00-8:00 pm. We hope that Dave can attend.

We are also hosting an in-person open house for anyone interested in the project on Thursday, June 13. We hope that you can help share the public open house with the rest of Charbonneau residents and that you can attend. I've attached a postcard that announces both events; feel free to share! The information is also listed below.

Thursday, June 13, 2024

Drop by between 4:00-7:00 pm

North Marion High School, Commons

(20167 Grim Rd NE, Aurora, OR 97002)

Light refreshments provided; children welcome

Tendremos interpretación en español en la reunión. We will have Spanish interpretation at the meeting.

This meeting provided an opportunity for the neighbors, PAC members, and other interested community members to learn about the Airport Master Plan project. This meeting will present the preliminary alternatives for the Aurora State Airport Master Plan. All written and verbal comments collected during the open house will be included in the event Summary.

Please let me know if you have any questions.

Thanks,

Subject: Charbonneau Replacement on PAC

Brandy,

This message is to notify you that effective immediately, Charbonneau Country Club board director Dave Mauk will replace Jeff Baymor as the representative on the Aurora Airport PAC.

Please include Dave in all correspondence and meeting notices. Dave is copied on this message.

Please respond back that you have received this email and that you are the correct person to make these changes.

Thank you,
Anne Shevlin, President
Charbonneau Country Club

Addendum to PAC Feedback Form:
Problematic Elements of Refined Alternatives in Aurora Airport Master Plan

- all of the refined alternatives are unsuitable for the constrained site & MAP
- refined alternatives are not reasonable when existing constrained site remains a constrained site
- refined alternatives inadequately address future noise exposure & mitigation
- refined alternatives are not compliant with state land use laws & invite costly litigation
- refined alternatives as well as larger & more frequent aircraft are not supported by local community
- insufficient data provided to demonstrate that airport operations are self-sufficient & sustainable without state & federal funding, while funds from the general fund are budgeted for operations
- Aurora State Airport operates at a loss where self-generated revenue is insufficient
- LUBA rulings & ongoing legal issues are costly, time consuming & adversarial
- acquiring private land currently zoned for agriculture is adversarial & litigious
- relocating state highway (551) & other surface roads is unfeasible, adversarial, impractical & costly
- MAP did not follow procedures in its forecasting, where statistics fail to show basis of need
- expansion is unnecessary when over 85% current use is small aircraft that fit the constrained site
- cost, inconvenience, ROI of relocating existing private hangers is adversarial & impractical
- impact of adjusting take-off & landing fees, & fuel pricing as factors is not taken into account
- insufficient data regarding safety, noise & surface traffic impact of higher number of larger aircraft
- insufficient due diligence in not considering unused capacity at existing regional airports with superior facilities & infrastructure already in place as an alternative option
- lack of transparency regarding airport finances calls into question the validity of MAP
- inadequate accounting of local citizens' negative input especially in light of general fund usage
- local municipalities' & other interests' input unaccounted for & not sufficiently documented
- lack of assessment for alternative of runway addition divided on both north & south ends
- inadequate assessment of negative impact on nearby residential neighborhoods & residents
- state of water, sanitation, fire suppression, & emergency services onsite is deficient
- insufficient assessment on local surface transportation based on refined alternatives
- deficient assessment of environmental factors & public health
- MAP documentation with respect to the airport's 10-15 year safety record is inadequate
- failure of applying reasonable standards to high cost/limited benefits of refined alternatives
- imprudent that ODAV's current budget is partially funded from the general fund with $250,000 budgeted for litigation legal fees at Aurora Airport while planning costly refined alternatives
- insufficient due diligence without comparative analysis in use of funds for an alternative project at a different airport that has existing facilities & meets runway specifications for larger aircraft
- deficient documentation identifying specific airport stakeholders & aircraft benefiting from MAP
- reparation for stakeholders who are disadvantaged by refined alternatives is not taken into account
- inadequate explanation why Aurora airport isn't candidate or eligible for modified C-II certification
- insufficient explanation why Aurora airport can't return to B-II certification with current use 85% small aircraft, after shifting higher-rated aircraft to regional airport with C-II or higher certification

Aurora State Airport Master Plan Website Comments

Name	David Mauk
Organization	Charbonneau Country Club
Comments or questions?	There are many ways to assess the proposed Aurora State Airport master plan. Before that, I'd like to put this in context from the participants' points-of-view.

Flight operators see safety, services and ease of operations as priorities. Property owners want utilization and positive return on their assets. Nearby communities view it through the lens of
noise disturbance, potential accidents in their neighborhoods, negative impacts on property values,
and preservation of farmland. FAA's view is through the microscope of compliance to its standards.
And ODAV's point of-view has an eagle eye focused on promoting airport growth, above its safety
and efficiency goals, good neighbor policies, and benefits to a greater number of Oregonians.

What has been witnessed during the decade-plus struggle of devising a master plan for Aurora State Airport demonstrates that ODAV has diverted from its 'mission to provide infrastructure, financial resources, and expertise to ensure a safe and efficient air transportation
system.' The agency presses forward as an advocate for Aurora Airport's growth, bypassing
infrastructure, financial stability and safety aspects.

Somewhere along the way, ODAV's mission morphed into being a 'chamber of commerce' -like agency for the aviation industry. Its dual mandates - aviation safety and aviation growth - are
proving to be incompatible with each other. As a public agency, it has a core duty of providing
safety for that industry and the public who use and are impacted by it. ODAV is failing in this
primary duty at Aurora Airport.

Before final consideration, it seems useful to untangle the web of why the plan for this airport is now in its second decade, all the while universally unpopular with community stakeholders,

and now it seems, operators and property owners, too.

Twenty-eight general aviation airports are owned by ODAV, who is responsible for providing infrastructure and safe usage for those airports. Some of these airports are more important lifelines to their communities than others, connecting recreation, commerce, healthcare, and disaster assistance. Many of those airports have needs that exceed allocated funds. In total, this state agency has a role in nearly 100 public use airports in Oregon.

One airport emerged to receive extra attention, funds and a push to grow it beyond the limits of its constrained site. A tower was built at that one airport. Users of this airport began flying larger aircraft under compliance waivers. To meet standards for these non-compliant larger aircraft, this airport would need to expand its runway and make other costly improvements. This airport would need a master plan enabling it to meet the demands of few, large, mainly transient, non-compliant aircraft, despite its constrained site, over 90% usage by light aircraft, and objections of community stakeholders. This is where Aurora State Airport is now and has been for years. ODAV is flying outside the boundaries of its mission. Excuse the use of mixed metaphors, but the master plan for Aurora Airport has been a runaway train. And there is no light at the end of its tunnel.

ODAV's ambition as an advocate and property developer, is misguided and not compatible with its core duty of aviation safety. ODAV is not held accountable to the citizens of

Oregon in its current structure. ODAV's lack of budgetary restraint and financial accountability is reckless when other state agencies are counting pennies and reevaluating spending priorities. ODAV does not provide adequate benefits for the funds it receives and the communities it serves. And it's safe to say that a development strategy to use this airport for unmanned air commerce will also crash-land.

Without substantial FAA financial backing it would not be feasible for ODAV to fly beyond its core mission. ODAV's empire-building at a general aviation airport in the north edge of Marion County is irresponsible when a 750 acre, full service, modern, underutilized airport sits dead center in this same county. Salem-Willamette Valley Airport, as well as McMinnville Municipal Airport, are well-positioned, and more than capable and ready to accept large aircraft, and subsequent revenue growth that may come from it. This alternative deserves serious due diligence and consideration.

ODAV's preferred alternative is a solution looking for a problem, not a solution that fits Aurora Airport's constrained site, nor the region's aviation budget. Stuffing ten pounds into a five-pound sack doesn't make sense. Finding ways to make the sack fit more makes it undependable. Putting ten pounds into a twenty-pound sack, or better yet, having two twenty-pound sacks, is preferable, with plenty of extra room for safety. Aurora Airport is a flawed location for expansion. Salem and McMinnville are ideal solutions for larger aircraft and space without breaking the bank.

In conclusion, ODAV is misguided, underperforming and wasting resources in it's aviation promotion activities. This jeopardizes its core mandate of 'providing infrastructure, financial resources and expertise to ensure a safe and efficient air transportation system.'

Its preferred plan for Aurora State Airport is no plan at all. Not when it's irresponsibly expensive, opposed by every neighboring community, will invariably lead to costly lawsuits that further delays compliance with FAA standards, and when regional, underutilized airports are readily available at low cost to ODAV.

As history has shown over the past decade, opponents of expanding Aurora State Airport to accommodate larger, mainly transient jet aircraft, while ignoring environmental, noise, safety, and land use directives, as well as community objections, are not going away. ODAV directors, board members and staff have come and gone, but we are, and will still be here, to protect our community from the ambitions of an unaccountable agency, out-of-state parties, and the greedy few who insist their self-interest is more important than thousands of local stakeholder citizens of Oregon.

The Charbonneau District of Wilsonville, my constituency of several thousand citizens, is year-in and year-out, the highest voter turnout in Oregon. We care about what happens in Oregon, and make sure our voices are heard. This letter gives voice to what we're saying, as adamantly as ever.

We don't want to lose value in the thousands of properties we call home. We don't want to

see the quality of our air, water and soil suffer more environmental degradation. We don't want to
lose valuable farmland. We don't want our municipal governments and state regulations to be run
over by big moneyed interests. We don't want the peace and quiet of country living to be ruined.
We don't want another pretext to expand the airport and do this all over again.

It's the duty of the ODAV board of directors and governor to consider airport options in the region as preferred alternatives to this colossally fanciful plan, to clip ODAV's wings in its non-
essential activities, and return it to a safety mandate that can benefit all Oregonians, instead of in this
case, only a few operators who have reasonable alternatives, and affluent, transient out-of-state users.

Dear all,

This email is regarding the Aurora airport master plan that is stating to remove hanger in order to accommodate another taxi way.

For your information there is a significant shortage of hangers. I have been trying to find a hanger for the last two years to no avail. The hangers waiting list at each airport to include Aurora airport is miles long. It would be incomprehensible to remove any hangers for the purpose of building another taxiway. There is no need to build an additional taxiway as there is no taxiway traffic issues whatsoever.

But there is definitely an impact to the owners and renters of those hangers which include established businesses.

There is absolutely zero purpose of taking this route.

I am more than positive that FAA would consider any exemptions if they were requested should FAA compliance be a cornerstone of this proposal.

Please feel free to contact me with any questions or clarifications.

Regars,
Karina Mayner

You don't often get email from hannahmclaughlin13@yahoo.com. Learn why this is important

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

To whom it may concern,

Good morning. My name is Hannah McLaughlin. I am a local pilot who regularly flies in and out of Aurora State Airport (UAO). I am also an employee of Aerometal International, Inc. (AMI) located at UAO. I am writing regarding the proposed airport master plan for UAO and some concerns I have about it.

My first concern is the tearing down of private hangars. As you know, hangars and land are both owned by the hangar owner (as opposed to Salem, where owners own the building but lease the land underneath. In plane 1A, it states that "South apron aeronautical properties are acquired, and hangars removed to accommodate parallel taxilane and vehicle service road"

How does the state intend to acquire these properties? To the best of my knowledge, these are all privately owned properties. Does the state have grant money? As an Oregon tax payer and someone employed at the airport, I cannot say that I condone my tax money being used to destroy my place of employment.

Why does there need to be a vehicle service road next to the taxiway? In my opinion, this is dangerous and will lead to more runway and taxiway incursions by unauthorized vehicles and pedestrians. There is already an internal access road that is partially constructed behind these hangars, that has already been approved. Why not simply finish constructing this through-road? Proposal 1B, while not destroying any hangars, still includes this road right in front of the hangars closest to the taxiway. This takes up valuable ramp space for the businesses located

there, and poses a huge safety risk. How does the state propose to provide training to delivery drivers and anyone else who may need to use the access road? Having a road going directly through a very active ramp poses a huge safety issue for anyone not properly trained and who may leave the road, cause taxiway or runway incursions, cut off aircraft that have right of way, or damage aircraft on the ramp with their vehicle(s)

My second concern is the economic impact of this master plan. The hangars that are intended to be torn down under 1A include AMI, Vans Aircraft, and Life Flight. How does the state intend to handle hundreds of employees either temporarily or permanently losing their jobs? Working for AMI, I cannot think of another airport we could move to and still conduct business out of while our current hangar is torn down. We work on large vintage aircraft that are hard to find hangar space for as it is. Where does the state suggest companies like AMI move during this process?

Is the state going to cover my and my coworkers' lost wages for the time that we are unable to work? AMI employs 30+ people. What about Vans? Wilson Construction? Are you going to force businesses to close for an indefinite period when they cannot find other places to operate out of? How does the state propose that Life Flight continue to operate when their base of operations is destroyed? Removing Life Flight's hangar would be a huge disruption to the life saving services they provide, and create a huge burden on a non-profit organization.

I see in 1A that the state claims this will provide hundreds of thousands of square feet of new land for hangars to be developed, however, this space only exists because of the hangars that are being torn down. Will businesses that are forced to sell their hangars to the state be given funds to rebuild? Or will the state force businesses to lease the land back and build new hangars at their own expense? This is not economically feasible for many.

AMI also supports many local businesses in Canby, Aurora, and Wilsonville, whether we are purchasing raw materials, need specialty machining or welding done, or need graphics work. That support disappears if AMI is forced to shut down.

I love working at UAO. I have worked for AMI for almost 7 years, and it is an amazing place to work. I have built my life around working here, and losing not just my job, but the community I have built for myself there would be detrimental to me.

The Oregon Department of Aviation's mission is to provide infrastructure, financial resources, and expertise to ensure a safe and efficient air transportation system. How does using taxpayer money to acquire private property, shut down local businesses, and force people out of work in an already tough economy align with this mission? Your vision to provide an integrated Aviation System benefiting all Oregonians doesn't work when you are forcing Oregonians who work in the aviation industry to lose their jobs.

This is an absolute waste of taxpayer dollars, and I cannot fathom why ODA would choose to take this course of action. Like many employed both in Oregon and at UAO, I cannot afford to lose my job. I strongly encourage the ODA to reconsider this master plan and consider the economic impacts on taxpayers, those employed on the airport, and the local economy surrounding the airport.

Thank you,
Hannah

How does the state propose that Life Flight continue to operate when their base of operations is destroyed? Removing Life Flight's hangar would be a huge disruption to the lifesaving services they provide and create a huge burden on a non-profit organization.

I see in 1A that the state claims this will provide hundreds of thousands of square feet of new land for hangars to be developed, however, this space only exists because of the hangars that are being torn down. Will businesses that are forced to sell their hangars to the state be given funds to rebuild? Or will the state force businesses to lease the land back and build new hangars at their own expense? This is not economically feasible for many.

AMI also supports many local businesses in Canby, Aurora, and Wilsonville, whether we are purchasing raw materials, need specialty machining or welding done, or need graphics work. That support disappears if AMI is forced to shut down.

I love working at UAO. I have worked for AMI for almost 7 years, and it is an amazing place to work. I have built my life around working here, and losing not just my job, but the community I have built for myself there would be detrimental to me.

The Oregon Department of Aviation's mission is to provide infrastructure, financial resources, and expertise to ensure a safe and efficient air transportation system. How does using taxpayer money to acquire private property, shut down local businesses, and force people out of work in an already tough economy align with this mission? Your vision to provide an integrated Aviation System benefiting all Oregonians doesn't work when you are forcing Oregonians who work in the aviation industry to lose their jobs.

This is an absolute waste of taxpayer dollars, and I cannot fathom why ODA would choose to take this course of action. Like many employed both in Oregon and at UAO, I cannot afford to lose my job. I strongly encourage the ODA to reconsider this master plan and consider the economic impacts on taxpayers, those employed on the airport, and the local economy surrounding the airport.

Thank you,

Hannah

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

Hello ODAV Alex Thomas,

Thank you for your time and this opportunity to introduce myself. My name is Tyler Meskers, a property owner (https://maps.app.goo.gl/PRi1xfcwGBHGPUSx7) of approximately 30 acres of Farm land near the Aurora State Airport. I understand that there is a lot happening with the airport Master Plan, specifically its impact to property owners at the airport, and surrounding land near the airport. I thought it would be a good to connect.

We understanding the need for safety and improvements but I ask that you keep our family farm in mind when considering development of that area. If I read the proposals correctly, I think the drain field could have an big impact on our farm on the South end of the runway.

We've been farming that area for 20+ years and are open to seeing a safer, more developed airport, however I hope you keep our family business in consideration specifically how it can impact our land, business, and young family.

If ever you have any questions, or would like to connect, please do not hesitate to reach out. We would be happy to assist with efforts to find a win win scenario for all those who will/may be impacted.

Thank you for your time and happy holidays.

Sincerely,
--

Subject: FW: ODAV master plan alternatives submitted - Objection

To whom it may concern.

This attached letter is to confirm my Opposition to the July 30, 2024, Aurora Master Plan Alternatives. None of the options presented are feasible or realistic. With at least one option that would destroy our operation/business here at the Airport.
Runway extension at the Aurora State Airport is needed for increased safety but not at the unnecessary expense and destruction of the surrounding communities and businesses/operations at the Airport.

RE: Comments on July 30, 2024 Aurora Master Plan Alternatives

Ladies and Gentlemen,

This letter is written on behalf of the direct airport stakeholders whose aviation related businesses are located at, and rely upon, the Aurora Airport. Please include this letter in the record of the 2023-2024 Aurora Airport Master Plan proceedings.

On July 30, 2024, the Oregon Department of Aviation (ODAV) presented three alternatives for the development of the Aurora Airport for the next 20 years and invited comment on those alternatives. **The direct airport stakeholders strongly OBJECT to all of those proposed alternatives: 1A, 1B and 2.**

Objection to Process

At the July 30, 2024 meeting, PAC members were invited to comment on the proposed alternatives via checking a box on an online form to identify which of ODAV's three alternatives they preferred. Participants had no way to offer meaningful comments or explain why none of the alternatives were acceptable. The undersigned strongly objects to ODAV's process as it is not reasonably calculated to solicit input from stakeholders as required by federal law to determine a preferred alternative. Reserving that objection, the Aurora Airport direct airport stakeholders present the following comments on the July 30, 2024 ODAV proposed master plan alternatives.

General Objection – the Alternatives Present a False Choice: Sacrifice the Safety of the Aurora Airport in the Name of Safety

Under ODAV's "alternatives" the runway extension that is well-documented to be badly needed now for safety, is held hostage to prerequisites that will take a decade or more (if they can even happen at all) and hundreds of millions of dollars that no one has. In other words, ODAV's alternatives ensure that the runway safety improvement will never happen or will happen only if the airport is less safe, all in service of perfect prerequisite compliance with design standards. This is a false choice and one that FAA does not and in fact cannot demand and ODAV should not demand this false choice either. The false choice is not only contrary to the very purposes of aviation master planning and federal law but also ORS 836.600-642 and ODAV's mission.

Alternatives Proceed from False Assumptions

For the alternatives to have legitimacy, they must proceed from accurate assumptions. The proposed alternatives do not proceed from accurate assumptions. To the contrary, each of the three proposed alternatives proceed from false premises.

The first false assumption is that FAA will not allow the airport to "maintai[n] current non-standard conditions" and if the airport has any "non-standard conditions," then FAA will place the runway "in maintenance only mode ***."[1]

The second false ODAV assumption is that it is necessary for ODAV to acquire the privately owned "through the fence" properties adjacent to the airport "to ensure [their] continued long-term aeronautical use."

---

[1] ODAV July 30, 2024 PPT Presentation to Planning Advisory Committee. This erroneous assumption carries forward to the August 1, 2024 "Refined Preliminary Alternatives Analysis" which similarly begins by asserting that ODAV has "recognized that maintaining current non-standard conditions is not acceptable to the Federal Aviation Administration (FAA)." There is no such lawful FAA position that ODAV may "recognize." To the extent that ODAV has adopted such a "recognition" it is contrary to both federal and state law and may not serve as the foundation for the airport's 20-year future.

Starting with the second false assumption, we note that there is nothing to support the assumption that if ODAV owned the undersigned's private aviation related properties they would be bettered assured to remain in aeronautical use. Respectfully, there are a lot of reasons to believe ODAV ownership of our property would have a contrary result. It is we, the private through the fence owners, who have the strong incentive to maintain robust aviation use of our adjacent private property because it is suitable for no economic use other than aeronautical use and we have invested and continue to invest ***millions of dollars*** to assure the success of our aviation related uses there.

Conversely, we have not seen evidence that ODAV is committed to growing and supporting aeronautical use of our properties at the Aurora Airport. We have pushed for more than a decade for ODAV to remove trees that are a hazard to aviation. ODAV hasn't gotten around to doing that. We have pushed for decades for ODAV to extend the airport's runway for safety, but ODAV hasn't gotten around to doing that, despite the runway extension being approved on the 2012 airport ALP. ODAV told the airport's opponent's that the 2012 airport master plan had not been finally adopted when ODAV had clearly adopted it (otherwise there would have been no 2012 ALP), inviting years of litigation that resulted in a remand of the 2012 master plan on land use grounds. ODAV did not bother to respond to that remand of the 2012 master plan, as it should have.

In all respectfully, the only evidence is that the private through the fence owners have the great documented interest in the continued aeronautical use of their property – they (we) have invested millions of dollars to support aviation use at the Aurora Airport and we continue to do so, our properties are useful for nothing but aviation related use in fact. There is simply nothing to support ODAV's "assumption" that ODAV needs to buy our property to ensure its continued aeronautical use. We note that this second premise is also contrary to the legislative command in ORS 836.640-642 that ODAV **support** the private through the fence ownerships and their economic development, not buy them

out. ODAV is constrained by this legislative command. The second "assumption" is simply a nonstarter.

With respect to the first erroneous assumption, the assumption's referenced "non-standard conditions" are primarily the Runway Object Free Area (ROFA) required separation for C-II design aircraft between the runway and Highway 551. [2] The law does not support ODAV's first erroneous premise that FAA always requires that airports meet all design standards. The law and FAA's decades of practice is exactly the opposite.

In this regard, federal law expressly provides FAA with authority to issue modifications to standards "when necessary to meet local conditions" so long as the "modification will provide an acceptable level of safety, economy, durability and workmanship." 14 CFR 152.11(b). FAA staff lacks authority to override that federal law that recognizes that "non-standard conditions" happen and can be allowed to continue in the right circumstances, as presented here.

The truth is that FAA routinely approves modifications to standards where the modification provides the requisite "acceptable level of safety." FAA has approved modifications at airports from Renton where 737's takeoff and land daily at a B-II airport, to SJC which has modifications to standards for many FAA requirements. This happens frequently enough that, as required by Congress, FAA in conjunction with the National Transportation Research Board and National Academies of Sciences, published a technical handbook entitled "**Risk Assessment Method to Support Modification of Airfield Separation Standards"** that goes to a lot of trouble to

---

[2] ODAV's "alternatives" assume another "non-standard" condition regarding the location of the airport's septic drainfields in the north and south. The septic drainfield in the south was expressly approved by ODAV, FAA and Marion County in a land use process. It is not "non-standard" or if it is, it is already approved – by ODAV and FAA. Moreover, if necessary, those drainfields can be brought to whatever standard applies. But ODAV may not merely assume they are "non-standard", say they will be "removed" in all alternatives but have no other location for them and no analysis of whether it is feasible to establish any alternative location for them. If ODAV's unstated plan is just to annex the airport to the 900-population City of Auora that has done nothing but oppose the airport for the past decade, and that had a mayor who we understand to be on record saying the city wanted to annex the airport to shut it down, the private airport stakeholders strongly oppose any such -as yet – unarticulated plan.

explain exactly how to assess whether a modification to an airport design standard will provide an acceptable level of safety. Contrary to the July 30 ODAV "assumptions" and August 1 ODAV "recognition", this federal risk assessment publication states that "**FAA does accept requests from airports for modifications to standards**."

Following federal law and the FAA Risk Assessment publication, respected airport planner, Aron Faegre prepared such an analysis under the FAA published risk-assessment methodology that **concludes maintaining the existing ROFA between the runway and Highway 551 provides an acceptable level of safety.** In other words, were ODAV to merely ask (and Mr. Faegre has done the work to support that ask), a modification to the ROFA would be granted. Which means contrary to ODAV's "assumptions" underpinning the three alternatives ODAV revealed on July 30, 2024, FAA would approve maintaining the existing non-standard conditions at the airport. This should not be a surprise because FAA approved the exact ROFA modification for a C-II design aircraft that Mr. Faegre demonstrates meets modification standards, when it approved the 2012 ALP for the airport.

FAA Approved the Modification for the ROFA - Separation of the Runway to Highway 551 – in the 2012 ALP under Airport Design Standards for a C-II Airport

The approved ALP that currently governs the airport shows that FAA approved the runway extension to the south with a ROFA modification to standards for the C-II design aircraft for the separation between the runway and Highway 551.

That means there is no reason to think that the same ROFA modification to standards cannot be approved here. ODAV should apply for it and FAA almost certainly will grant it.

Proper Assumptions for this Master Planning Effort

With all due respect, there are proper assumptions for this master planning effort. The direct airport stakeholders urge ODAV to adopt the following assumptions and goals for the Aurora Airport Master Plan:

- ODAV can and should apply for modifications to C-II design standards for existing conditions at the airport that would otherwise require unachievable prerequisites to the runway extension.
- ODAV should grow and support the through the fence aviation operations as it is instructed to do in ORS 836.640-642. Accordingly, ODAV should expand the airport boundary to enable the last undeveloped through the fence areas shown on the draft master plan to grow and flourish.
- ODAV has an obligation to manage the Aurora Airport to safely support the general aviation that has grown to rely upon it and the Oregonians who rely upon that general aviation.
- ODAV should support the Aurora Airport as an economic powerhouse for the region being responsible for thousands of jobs and millions of dollars in payroll and visitor spending.
- ODAV should support the Aurora Airport that is known to be a resiliency center in the event of natural disasters – whether they be wildfire disasters or the Cascadia Subduction Event.
- ODAV should support the Aurora Airport that is home to Life Flight that provides important air ambulance service to needy Oregonians and delivers organs for transplant that saves lives.
- To the extent ODAV is privately planning otherwise, ODAV should strongly resist efforts by opponent municipalities like the city of Aurora to annex the airport.
- The airport should not be casually discarded to the bin of unachievable prerequisites.

Alternative that ODAV Should Consider

A wholly achievable alternative that is consistent with FAA and state law that ODAV should consider is:

a. a 500' runway extension to the north; better yet a 750' runway extension to the north. 750' is well-understood to be better and more appropriate for the long master planning horizon.
b. Reapproval for the necessary existing modification to standards for existing conditions.
c. Adjust the airport boundary to include the undeveloped through the fence areas on the current draft,

Conclusion

The direct airport stakeholders stand ready to work cooperatively with ODAV toward an appropriate 20-year master plan for the Aurora Airport along the lines of the alternative that we outline above. However, respectfully, we cannot abide any of the July 30, 2024 proposed alternatives and strongly oppose all of them. We hope that ODAV will agree that the assumptions and alternative proposed by the direct airport stakeholders are appropriate ones that ODAV should adopt in support of general aviation at the airport, regional disaster resilience and economic vitality for the decades to come. The future of aviation at the Aurora Airport depends upon it.

Thank you for your consideration.

Sincerely,

Ken Meuser

Hello Mr. Beach
I just wanted to be another voice expressing my objection to the new Master Plan at Aurora Airport.
The State of Oregon taking (forcibly procuring) private property for the purpose of bringing the airport into "FAA Standard" is unacceptable. Another realistic option must be obtained and presented. No one on either the East or West side of the Aurora runway wants their property taken away by the state. It would be a great detriment to the overall health of the Airport, its surrounding communities, cities, and businesses.

Alex R. Thomas, Planning, Policy and Program Manager Anthony Beach, State Airport Manager

Sirs,

I am submit to you my personal comments opposing that portion of State of Oregon's, Oregon Department of Aviation's (ODAV) Aurora Airport Masters Plan under current review giving serious consideration to the taking of privately owned hangars. This idea seems extremely counterproductive to the overall needs of general aviation. Specifically the needs of both business and private aircraft owners. A shortage of hangars exists now.

Owners of privately owned aircraft provide significant employment and revenue to the County and State. This taking/destruction of hangars reportedly is a land use/taxiway/road issue. ODAV is supposed to be an advocate for the users of airports under their purview. Would not these users be better served by purchasing 1 acre from a willing seller to resolve your issues.

Does ODAV really want to, or be known as, the cause of undue hardship on businesses and individual hangar owners which it is tasked to serve, by increasing the unavailability of hangar space.

Airport safety can be improved without destruction of any hangars.

Sincerely,

Philip L. Miller

NOTICE OF A MEETING

FOR THE AURORA STATE AIRPORT
Airport Master Plan Project

Notice is hereby given that the Oregon Department of Aviation (ODAV) will hold an online (via Zoom) Public Planning Advisory Committee (PAC) meeting.

When: Tuesday, March 12, 2024, from 5:00 p.m. - 7:00 p.m.

Where: Join by phone or virtually (via Zoom)

Please register and join the virtual **PAC meeting** by visiting: https://publicproject.net/AuroraAirport

This meeting will provide an opportunity for the PAC and project stakeholders to review Working Paper 1, approved forecast, and learn about the Airport Master Plan project. For copies of the airport planning work products, please visit: https://publicproject.net/AuroraAirport

Accessible Meeting Information

Special accommodations are available upon advanced request. Please contact Alex Thomas at least 48 hours prior to the event to discuss specific needs.

For airport questions or project information, please contact Alex Thomas, ODAV Planning & Programs Manager, through the following means: Alex.R.Thomas@odav.oregon.gov

Kenji,

We'd like to schedule a 20-minute zoom meeting with you this coming Tuesday or Wednesday to discuss KUAO. As you know, the aeronautical interests at the airport are justifiably quite concerned about the master plan alternatives and it has gotten the attention of national interests as well. We want to be sure that you understand the concerns and we would like to understand your thinking for advancing them. Please let me know what works. Thank you. All the best, Wendie

Hi Wendie,

Following up on this discussion, please see the attached documents pertaining to Modification of Standards. The Word document is dated 2012 in our system, the PDF Mod form is from 2018. I don't have any email records for these forms specifically, but the 2023 LOI closeout letter confirms the FAA has not granted a MOD for the ROFA at UAO.

Thank you,

Subject: Meeting last week

Wendie!

Thanks for reaching out to ODAV to talk about the comments that you provided on behalf Ted Millar, TLM and AABC concerning the refined alternatives presented to the PAC on July 30, 2024. I also appreciated the opportunity to speak directly with the communities that are and will be affected by ODAV's planning efforts for UAO. It's always important to listen to stakeholders about their concerns and their wishes. I hope our conversation was helpful in understanding ODAV's role in this planning phase and in particular our hope to select an alternative that FAA will support and ultimately agree to extend federal funds to help implement. Like I mentioned in my response to your request for a meeting, I'll be ensuring that all ODAV's communications with its stakeholders are made part of the record. This this email is intended to provide a high-level summary of our discussion today in which you, Anthony Beach, Alex Thomas , Stacy Posegate of DOJ and I attended by teams.

As I explained in our meeting, Chuck Garrison, Director of the Northwest Mountain Region for FAA, has made clear to ODAV that FAA will not fund future projects if the Aurora Airport master plan does not include an ALP that will bring components of the airport up to FAA's standards of compliance. The primary areas of concern, as we have discussed, are the ROFA which extends over and above the Hubbard Highway, OR 551, and the drainfield within the Runway Safety Area supporting your clients' businesses.

I understand that you are asking ODAV to consider another alternative airport layout plan, which you describe in more detail in your letter. You have explained that this alternative should be preferable because it would not require additional real property or moving OR 551. You have also stated that the current alternatives are unrealistic or unnecessary because they seek to obtain "perfect compliance" with FAA standards. But that, in your opinion, perfect compliance is not required. Rather, FAA has an obligation to consider any modifications requested by the ODAV. You also explained that your clients are extremely concerned with the investment that they have put into this airport and their relationship with ODAV. We take all input and comments seriously.

From: "Tykoski, Robert (FAA)" <Robert.Tykoski@faa.gov>
Subject: RE: Scope request - Runway Justification / Constrained Operations Report
Date: 17 December 2019 15:45
To: "PECK Heather" <heather.peck@aviation.state.or.us>
Cc: "STANSBURY Betty" <Betty.STANSBURY@aviation.state.or.us>, "CLARK Cathy RB" <Cathy.RB.CLARK@aviation.state.or.us>, "MAASS Matthew D" <Matthew.D.MAASS@aviation.state.or.us>, "Dalke, Joseph (FAA)" <joseph.dalke@faa.gov>, "Callahan, Sean (FAA)" <Sean.Callahan@faa.gov>

Heather,

On page 3-6 it calls out two items that need additional coordination with FAA:

RPZ - Extension of the runway will place non-compatible land uses in the RPZ. – To run this to ground and make sure that this is something the FAA can support, a RPZ memo needs to go to FAA HQ. Please see the attached document for additional direction.

ROFA - Wilsonville Hubbard Highway runs parallel to the RWY and the north-bound lane falls within the runway OFA. – A similar analysis to the RPZ needs to be done that includes looking at alternatives to resolve the non-standard conditions, costs, etc. Could the road move west? Could the runway/taxiway move east? The FAA does not provide any permanent modifications to standards; therefore, it is not appropriate to assume further development of a non-standard condition without first exploring options to eliminate the condition.

The document also calls out runway connectors which depending on if a solution to the ROFA can be identified may become part of a RWY extension scope and may also need to be considered (If we are touching the runway/taxiway then we would need to identify solutions for the direct access)

As stated during the call, these questions need to be answered prior to an EA because if physical solutions are identified to resolve any or all of the above mentioned issues, they would have a connected action to the RWY extension and need to be considered in the EA. Proceeding without a full understanding of the scope of a project risks segmentation under NEPA.

Please let me know if you have additional questions.

Regards,

Robert Tykoski

U.S. DEPARTMENT OF TRANSPORTATION
FEDERAL AVIATION ADMINISTRATION
NORTHWEST MOUNTAIN REGION
AIRPORT IMPROVEMENT PROGRAM

MODIFICATION OF AIRPORT DESIGN STANDARDS

BACKGROUND

1. AIRPORT:	2. LOCATION(CITY,STATE):	3. LOC ID:
Aurora State Airport	**Aurora, Oregon**	**KUAO**

4. EFFECTED RUNWAY/TAXIWAY:	5. APPROACH (EACH RUNWAY):	6. AIRPORT REF. CODE (ARC):
Runway 17/35	☐ PIR ☒ NPI ☐ VISUAL	**C-II**

7. DESIGN AIRCRAFT (EACH RUNWAY/TAXIWAY):

MODIFICATION OF STANDARDS

8. TITLE OF STANDARD BEING MODIFIED (CITE REFERENCE DOCUMENT):
Advisory Circular (AC) 150/5300-13, para 307

9. STANDARD/REQUIREMENT:
The runway object free area (OFA) requires that no above ground objects protrude above the runway safety area edge elevation. For Aurora State (ARC C-II) the standard OFA width is 800 feet.

10. PROPOSED:
Highway 551 runs north/south parallel to Runway 17/35. Current operations at the Airport justify increasing the Airport's ARC to C-II. The distance from the Runway 17/35 centerline to the Highway 551 centerline is approximately 400 feet. Considering the highway's width, the Airport is approximately 20 feet short of meeting the OFA design standard.

As the airport geometry is not changing from the current condition, the Oregon Department of Aviation requests a modification of the OFA design standard as defined in AC 150/5300-13, para 307.

11. EXPLAIN WHY STANDARD CANNOT BE MET (FAA ORDER 5300.1E):
Highway 551 and the vehicles travelling along the highway penetrate the Airport's runway OFA by approximately 20 feet.

12. DISCUSS VIABLE ALTERNATIVES (FAA ORDER 5300.1E):
Runway 17/35 could be located 20 feet eastward to meet the OFA design standard. Alternatively, Highway 551 could be located 20 feet westward to achieve the 400-foot separation standard. However, neither alternative is financially feasible due to the existance of airport buildings to the east and residential properties to the west.

13. STATE WHY MODIFICATION WOULD PROVIDE ACCEPTABLE LEVEL OF SAFETY, ECONOMY, DURABILITY, AND WORKMANSHIP (FAA ORDER 5300.1E):

No changes to the existing airport geometry are proposed. Additionally, the Department of Aviation has recently removed obstructions (shrubs) along the edge of Highway 551 to increase safety margins. The safety of people on the ground or in aircraft will not be reduced as a result of the proposed design standard modification.

U.S. DEPARTMENT OF TRANSPORTATION
FEDERAL AVIATION ADMINISTRATION
NORTHWEST MOUNTAIN REGION
AIRPORT IMPROVEMENT PROGRAM

MODIFICATION OF AIRPORT DESIGN STANDARDS FORM

ITEMS 1-17 ARE TO BE COMPLETED BY THE AIRPORT SPONSOR(ORIGINATOR). ALL OTHER ITEMS WILL BE COMPLETED BY THE FAA.

THE COMPLETED FORM WILL BE TRANSMITTED BY THE ORIGINATOR TO THE APPLICABLE ADO/AFO. THE ADO/AFO WILL TRANSMIT THE FINAL FAA DETERMINATION TO THE ORIGINATOR.

MODIFICATION TO AIRPORT DESIGN STANDARDS REQUESTS SHOULD INCLUDE SKETCHES OR DRAWINGS WHICH CLEARLY ILLUSTRATE THE NONSTANDARD CONDITION.

ITEMS

1. LEGAL NAME OF AIRPORT.

2. ASSOCIATED CITY.

3. AIRPORT LOCATION IDENTIFIER (SEE APPROACH PLATES/AIRPORT FACILITY DIRECTORY).

4. IDENTIFY THE RUNWAY(S), TAXIWAY(S) OR OTHER FACILITIES EFFECTED BY THE PROPOSED MODIFICATION TO STANDARDS REQUEST.

5. IDENTIFY THE MOST CRITICAL APPROACH FOR EACH RUNWAY IDENTIFIED IN #4.

6. AIRPORT REFERENCE CODE - SEE PARAGRAPH 2, PAGE 1 AC 150/5300-13(CHANGE 4) - I.E. C-II, B-II, A-I (SMALL).

7. NOTE THE DESIGN AIRCRAFT (ARC OR SPECIFIC AIRCRAFT) FOR EACH FACILITY IDENTIFIED IN #4. A DESIGN AIRCRAFT MUST MAKE REGULAR USE OF THE FACILITY. NORMALLY, FAA CONSIDERS REGULAR USE TO BE 500 OR MORE ANNUAL INTINERANT OPERATIONS.

IF THE AIRPORT SERVES A WHOLE FAMILY OF AIRCRAFT IN A PARTICULAR GROUP, THE ARC (I.E. B-II) SHOULD BE SPECIFIED. IF,HOWEVER, THE AIRPORT IS USED BY ONLY 1 OR 2 OF A FAMILY OF AIRCRAFT (IX- BEECH KING AIR C90), THE MOST DEMANDING (APPROACH SPEED, WINGSPAN) AIRCRAFT SHOULD BE SPECIFIED.

8. IDENTIFY THE SPECIFIC NAME OF THE STANDARD THAT IS PROPOSED TO BE MODIFIED FOR THE SUBJECT LOCAL CONDITION.

9. DESCRIBE (WORDS AND NUMBERS) THE DIMENSIONS AND REQUIREMENTS OF THE STANDARD AS PROVIDED IN AC 150/5300-13.

10. STATE THE PROPOSED MODIFICATION TO THE STANDARD.

11. DISCUSS THE LOCAL CONDITIONS THAT MAKE IT IMPRACTICAL OR IMPOSSIBLE TO MEET THE STANDARD.

12. IDENTIFY ALTERNATIVES TO THE SUBJECT PROPOSED MODIFICATION, AND SHOW WHY THESE ALTERNATIVES ARE NOT VIABLE.

13. DISCUSS HOW THE PROPOSED MODIFICATION WOULD IMPACT AIRPORT SAFETY AND EXPLAIN WHY AN ACCEPTABLE LEVEL OF SAFETY, ECONOMY, DURABILITY, AND WORKMANSHIP WOULD STILL EXIST.

14. TYPED NAME AND SIGINATURE OF AIRPORT AUTHORITY REPRESELNTATIVE.

15. SELF-EXPLANATORY.

16. SELF-EXPLANATORY.

17. SELF-EXPLANATORY.

18. TO BE COMPLETED BY FAA.

Subject: Potential for MOS related to runway extensions at UAO

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

Facility requirements chapter comments were provided earlier today. A question was asked of me when the Facility Requirements chapter was provided for review and I wanted to make sure it was answered concurrently with my review comments of the chapter.

The question was related to the likelihood of the FAA issuing a MOS for existing non standard conditions or allowing future projects to be constructed with MOS.

The question was asked to both Regional level management and ADO level management. The answer provided was consistent. The Region and ADO would not be in support of issuing MOS related to the extension of the runway. Standards would have to be met for ROFA and RSA requirements.

Please let me know if you need any additional information on this topic. We are aware this will have a significant impact on your next chapter, alternatives.

Mr. Tony Beach
Aurora State Airport
Airport Manager
3040 25th Street SE
Salem, OR 97302

RE: Investigation Closeout of Vehicle/Pedestrian Deviation

Dear Mr. Beach:

On December 30, 2022, we advised you that the Federal Aviation Administration was investigating an incident that reportedly involved:

A DARK BLUE CHEVY PICKUP TRUCK ENTERED TAXIWAY A FROM THE NORTHERN MOST EAST RAMP AREA AND PROCEEDED SOUTHBOUND 50FT BEFORE RE-EXITING TO THE EASTERN NON-MOVEMENT AREA. THERE WERE NO COMMUNICATIONS WITH THE VEHICLE. NO AC WERE INVOLVED.

This letter is to inform you that the investigation of this incident has resulted in the following recommendations.

1. Develop and implement training for access and procedures for the following:
   - Non-movement driving access
   - Movement area driving
   - Escort procedures

2. Develop and implement rules and regulations for Aurora State Airport. Consequences of non-compliance should be a component of the rules and include penalties for violations. Advisory Circular (AC) *150/5210-20A Ground Vehicle Operations to include Taxing or Towing an Aircraft on Airports* contains guidance for establishing programs that will improve access to movement areas, safety areas and the airport operations area.

3. Develop a plan to implement and educate tenants about rules and regulations and training requirements to include outreach, education and training opportunities.

4. Ensure enforcement for violations are adhered to when violations do occur.

5. Keep all gates closed to prevent inadvertent entry to the movement area by unauthorized persons and vehicles.

6. Evaluate installation of a vehicle service road (VSR) in the non-movement area.

7. Markings

- Install the markings in accordance with AC *150/5340-1M, Standards for Airport markings.*
- Non-movement area boundary marking - Upgrade the non-movement boundary marking from 6 inch width to 12 inch width (Paragraph 5.4.5.2).
- Upgrade standard taxiway centerline markings to enhanced centerline markings (Paragraph 4.3).
- Install Surface Painted Hold Position Signs (SPHPS) (Paragraph 4.5) and Enhanced Taxiway Centerlines.
- Develop and implement an airfield marking maintenance program including cleaning, replacing, and repairing faded, missing, or a nonfunctional markings; keeping each item unobscured and clearly visible; and ensuring that each item provides an accurate reference to the user.

8. Lighting

- Install standard taxiway edge reflectors to differentiate specific areas of airfield. South ramp area has a sea of pavement with markings not maintained and DOT reflectors installed. This makes it very difficult to differentiate between usable and unusable pavement.
- Long term solution would be to install taxiway edge lighting to all appropriate taxiways on movement side of airfield.

9. Signs

- Add taxiway direction and location signs to the airfield. Only runway exit signs and hold signs exist (with the exception of one destination sign). The airfield is controlled and when Air Traffic is conversing with pilots the pilots don't have an easy way to identify where they are at on the airfield.
- Install VSR stop sign at access points where through the fence operations areas exist that conform with AC *150/534-18G Standards for Airport Sign Systems.* Example of a location would be the movement area at Taxiway A1.
- Review current signs on airfield and ensure they meet current standards and remove incorrect and outdated signs.
- Provide signs at gates to reference gates are to be closed and to reinforce the rules and regulations. Such as an operator be responsible for an unauthorized entry if say there was someone to follow through the gate.
- Work with local Air Traffic Control to provide outreach and education.

<u>Identified non-standard Airport Design Standards</u>

1. Aurora State Airport Sponsor does not control the property for all runway object free areas (ROFA) for C-II standards. The C-II standard ROFA from runway centerline is 400 feet. This exceeds the current location of the non-movement boundary marking (365.5 feet from runway centerline). Due to this it was found Life Flight and other aircraft were seen parked within the ROFA which is contrary to airport design standards (reference AC *150/5300-13B Airport Design* paragraph 3.12.1)

2. The Airport Layout Plan (ALP) has listed the planned modification to standard for Highway 551 but the Office of Airports does not have an approved final modification to standard approved on file.

3. It was found that the Willamette sign on the north end of the airfield around Taxiway A1 was located in the ROFA.

At non-certificated airports that have received Federal grants, the owner is obligated to comply with Federal Grant Assurance #19, Operations and Maintenance, which includes implementing corrective actions to eliminate V/PD's. FAA Order 5200.10, Procedures for conducting investigations of Vehicle/Pedestrian Deviations, states that if V/PDs continue to occur on the airport, and the airport certificate holder/operator has not taken any actions to alleviate or reduce the runway incursion problem, it will be necessary for the FAA to initiate enforcement proceedings. An airport owner's failure to comply with its grant obligations may result in the FAA withholding discretionary funds during the course of its investigation, or as a result of the FAA's investigation (i.e., a finding that the airport is ineligible to receive Federal grants) until the matter is resolved. The FAA is not considering funding disruptions at this time, with the understanding that the airport is taking action to address V/PD's. By implementing these measures, and taking appropriate action to alleviate future taxiway incursions, will ensure the airport remains in compliance with Federal Grant Assurances.

Sincerely,

Andrew Edstrom
Airport Certification Safety Inspector

AIRPORT IMPROVEMENT PROGRAM

MODIFICATION OF AIRPORT DESIGN STANDARDS

BACKGROUND

1. AIRPORT:	2. LOCATION(CITY,STATE):	3. LOC ID:
Aurora State Airport	**Aurora, Oregon**	**KUAO**

4. EFFECTED RUNWAY/TAXIWAY:	5. APPROACH (EACH RUNWAY):	6. AIRPORT REF. CODE (ARC):
Runway 17/35	☐ PIR ☒ NPI ☐ VISUAL	**C-II**

7. DESIGN AIRCRAFT (EACH RUNWAY/TAXIWAY):

MODIFICATION OF STANDARDS

8. TITLE OF STANDARD BEING MODIFIED (CITE REFERENCE DOCUMENT):
Advisory Circular (AC) 150/5300-13, para 307

9. STANDARD/REQUIREMENT:
The runway object free area (OFA) requires that no above ground objects protrude above the runway safety area edge elevation. For Aurora State (ARC C-II) the standard OFA width is 800 feet.

10. PROPOSED:
Highway 551 runs north/south parallel to Runway 17/35. Current operations at the Airport justify increasing the Airport's ARC to C-II. The distance from the Runway 17/35 centerline to the Highway 551 centerline is approximately 400 feet. Considering the highway's width, the Airport is approximately 20 feet short of meeting the OFA design standard.

As the airport geometry is not changing from the current condition, the Oregon Department of Aviation requests a modification of the OFA design standard as defined in AC 150/5300-13, para 307.

11. EXPLAIN WHY STANDARD CANNOT BE MET (FAA ORDER 5300.1E):
Highway 551 and the vehicles travelling along the highway penetrate the Airport's runway OFA by approximately 20 feet.

12. DISCUSS VIABLE ALTERNATIVES (FAA ORDER 5300.1E):
Runway 17/35 could be located 20 feet eastward to meet the OFA design standard. Alternatively, Highway 551 could be located 20 feet westward to achieve the 400-foot separation standard. However, neither alternative is financially feasible due to the existance of airport buildings to the east and residential properties to the west.

13. STATE WHY MODIFICATION WOULD PROVIDE ACCEPTABLE LEVEL OF SAFETY, ECONOMY, DURABILITY, AND WORKMANSHIP (FAA ORDER 5300.1E):

No changes to the existing airport geometry are proposed. Additionally, the Department of Aviation has recently removed obstructions (shrubs) along the edge of Highway 551 to increase safety margins. The safety of people on the ground or in aircraft will not be reduced as a result of the proposed design standard modification.

MODIFICATION OF AIRPORT DESIGN STANDARDS FORM

ITEMS 1-17 ARE TO BE COMPLETED BY THE AIRPORT SPONSOR(ORIGINATOR). ALL OTHER ITEMS WILL BE COMPLETED BY THE FAA.

THE COMPLETED FORM WILL BE TRANSMITTED BY THE ORIGINATOR TO THE APPLICABLE ADO/AFO. THE ADO/AFO WILL TRANSMIT THE FINAL FAA DETERMINATION TO THE ORIGINATOR.

MODIFICATION TO AIRPORT DESIGN STANDARDS REQUESTS SHOULD INCLUDE SKETCHES OR DRAWINGS WHICH CLEARLY ILLUSTRATE THE NONSTANDARD CONDITION.

ITEMS

1. LEGAL NAME OF AIRPORT.

2. ASSOCIATED CITY.

3. AIRPORT LOCATION IDENTIFIER (SEE APPROACH PLATES/AIRPORT FACILITY DIRECTORY).

4. IDENTIFY THE RUNWAY(S), TAXIWAY(S) OR OTHER FACILITIES EFFECTED BY THE PROPOSED MODIFICATION TO STANDARDS REQUEST.

5. IDENTIFY THE MOST CRITICAL APPROACH FOR EACH RUNWAY IDENTIFIED IN #4.

6. AIRPORT REFERENCE CODE - SEE PARAGRAPH 2, PAGE 1 AC 150/5300-13(CHANGE 4) - I.E. C-II, B-II, A-I (SMALL).

7. NOTE THE DESIGN AIRCRAFT (ARC OR SPECIFIC AIRCRAFT) FOR EACH FACILITY IDENTIFIED IN #4. A DESIGN AIRCRAFT MUST MAKE REGULAR USE OF THE FACILITY. NORMALLY, FAA CONSIDERS REGULAR USE TO BE 500 OR MORE ANNUAL INTINERANT OPERATIONS.

IF THE AIRPORT SERVES A WHOLE FAMILY OF AIRCRAFT IN A PARTICULAR GROUP, THE ARC (I.E. B-II) SHOULD BE SPECIFIED. IF,HOWEVER, THE AIRPORT IS USED BY ONLY 1 OR 2 OF A FAMILY OF AIRCRAFT (IX- BEECH KING AIR C90), THE MOST DEMANDING (APPROACH SPEED, WINGSPAN) AIRCRAFT SHOULD BE SPECIFIED.

8. IDENTIFY THE SPECIFIC NAME OF THE STANDARD THAT IS PROPOSED TO BE MODIFIED FOR THE SUBJECT LOCAL CONDITION.

9. DESCRIBE (WORDS AND NUMBERS) THE DIMENSIONS AND REQUIREMENTS OF THE STANDARD AS PROVIDED IN AC 150/5300-13.

10. STATE THE PROPOSED MODIFICATION TO THE STANDARD.

11. DISCUSS THE LOCAL CONDITIONS THAT MAKE IT IMPRACTICAL OR IMPOSSIBLE TO MEET THE STANDARD.

12. IDENTIFY ALTERNATIVES TO THE SUBJECT PROPOSED MODIFICATION, AND SHOW WHY THESE ALTERNATIVES ARE NOT VIABLE.

13. DISCUSS HOW THE PROPOSED MODIFICATION WOULD IMPACT AIRPORT SAFETY AND EXPLAIN WHY AN ACCEPTABLE LEVEL OF SAFETY, ECONOMY, DURABILITY, AND WORKMANSHIP WOULD STILL EXIST.

14. TYPED NAME AND SIGINATURE OF AIRPORT AUTHORITY REPRESELNTATIVE.

15. SELF-EXPLANATORY.

16. SELF-EXPLANATORY.

17. SELF-EXPLANATORY.

18. TO BE COMPLETED BY FAA.

Subject: RE: Meeting last week

Hi Kenji,

Thank you for the note and meeting last week. The effort is appreciated. A few things.

The airport stakeholders sincerely hope that ODAV will take a serious look at the alternative they proposed. Nothing about it is inconsistent with ODAVs objectives and it is consistent with the note below **as well as** FAA requirements. Furthermore, the stakeholders' proposal came with a fully supported MOS! On the latter, the papers that Tony sent confirm that despite FAA's requests otherwise, ODAV has **never submitted** a proper MOS to the FAA. A mere glance at the single MOS ODAV apparently submitted in comparison to the one Mr. Faegre submitted (Faegre's meets the requirements of the FAA/NTSB manual, ODAV's does not) demonstrates why it is unsurprising that FAA did not approve the 'back of napkin' MOS previously submitted by ODAV's prior administration. It is simply impossible to credibly claim that FAA would reject a properly supported MOS – especially one presented for a phased in airport development program. The claim otherwise is fundamentally misguided.

As explained in the alternative that the stakeholders presented, the stakeholders' proposed alternative is far less intrusive, less expensive, less onerous, and more functional than **any alternative** presented in the ODAV process to date. We explained in the stakeholders' submittal that it would be easy to add moving the perimeter fence as a phase 1 item and it would be easy to add to the stakeholder's alternative a phase 2 of moving Highway 551 at the end of the 20-year term if FAA funds that move. We also explained that the idea of ODAV condemning the $300 mm in private investment to move the runway east including destroying business jet hangars and Atlantic is a nonstarter – that alternative effectively destroys the airport for C-II aircraft and is completely contrary to ODAV's legislative mandate in ORS 836.640-642 to support TTF operations, as ODAV must understand. The private aeronautics interests have invested in the airport's

development as the legislature intended creating significant economic development for the area. Destroying their work under any alternative is untenable, inconsistent with all known airport development premises and respectfully, unlawful.

Please understand that it was **impossible for anyone to provide meaningful comments** on the alternatives that ODAV presented. The facts from which all ODAV proposed alternatives flowed were, with respect, faulty and their outcome was untenable - no certain runway extension. ODAV staff mistakenly claimed that FAA required perfect compliance with design standards, and that FAA had refused any MOS in exchange for any runway extension and staff asserted that moving Highway 551 to the west would result in condemnation of many homes and businesses. **Neither are true**. Staff were unable to back up the claim about FAA demands when asked - it was clear something was being missed because the position attributed to FAA is contrary to the CFRs that govern FAA's authority as well as the govern master planning. It turned out that ODAV **never even attempted to submit a properly documented MOS**, making it unsurprising that in the absence of a proper MOS, that FAA expected compliance. And it turns out that the Highway 551 ROW is wide enough for the 20 feet necessary for perfect ROFA compliance **without any apparent need for condemnation of any homes or businesses.** Or at least with a lot less land being needed than the alternatives presented claimed. How much land is needed in truth has never been disclosed.

Further, from our meeting we learned that a 4th ODAV alternative is actually being considered by ODAV– which is an alternative never presented to the PAC. That being one in which airport development is phased in and for which the desperately needed runway extension is not held hostage to infeasible conditions. Given this revelation and the mistaken or at least incomplete factual premises that supported the ODAV alternatives presented on July 30, the stakeholders suggest (and respectfully the rules governing master planning require), that another round of alternatives be presented to the PAC for their input with the following revised elements:

1. Full disclosure about ODAV's phasing proposal – that the runway extension need not be and is not intended to be held hostage to either condemning the private airport development in the east or moving Highway 551 and condemning homes and businesses.
2. Full disclosure that ODAV has never presented a properly documented MOS to FAA and that under a phased approach that FAA will in fact approve a proper MOS so that the runway can be extended in the near term as is desperately needed.
    a. Here the fully documented Faegre MOS is "temporary" in that it supports phase 1 runway extension and phase 2 results in perfect design standard compliance toward the end of the master planning term.
3. Full disclosure about the amount of space within the existing ROW to move Highway 551 west and concerning the extent to which condemning homes or businesses is actually required because it appears such condemnation is not required. What is required in truth?
4. The stakeholders' proposed alternative is presented as an alternative, with
    a. the Faegre properly documented MOS to support phase 1 which would include the runway extension
    b. moving highway 551 to the west within the existing right of way (without condemnation of homes and businesses if that is possible as it appears) as a phase 2 plan
    c. the drainfield in the south remains but is improved per the geotechnical report submitted demonstrating it can be improved to meet FAA standards.
    d. adding the TLM TTF property to the airport boundary as apparently now properly proposed – because it is the last undeveloped property that all KUAO master plans have envisioned be developed with aeronautical uses and TLM has done the work to enable it to support eVTOLs – something that does not exist anywhere else.

We look forward to your thoughts. Thank you. Best, Wendie Kellington

Subject: Meeting last week

Wendie!

Thanks for reaching out to ODAV to talk about the comments that you provided on behalf Ted Millar, TLM and AABC concerning the refined alternatives presented to the PAC on July 30, 2024. I also appreciated the opportunity to speak directly with the communities that are and will be affected by ODAV's planning efforts for UAO. It's always important to listen to stakeholders about their concerns and their wishes. I hope our conversation was helpful in understanding ODAV's role in this planning phase and in particular our hope to select an alternative that FAA will support and ultimately agree to extend federal funds to help implement. Like I mentioned in my response to your request for a meeting, I'll be ensuring that all ODAV's communications with its stakeholders are made part of the record. This this email is intended to provide a high-level summary of our discussion today in which you, Anthony Beach, Alex Thomas , Stacy Posegate of DOJ and I attended by teams.

As I explained in our meeting, Chuck Garrison, Director of the Northwest Mountain Region for FAA, has made clear to ODAV that FAA will not fund future projects if the Aurora Airport master plan does not include an ALP that will bring components of the airport up to FAA's standards of compliance. The primary areas of concern, as we have discussed, are the ROFA which extends over and above the Hubbard Highway, OR 551, and the drainfield within the Runway Safety Area supporting your clients' businesses.

I understand that you are asking ODAV to consider another alternative airport layout plan, which you describe in more detail in your letter. You have explained that this alternative should be preferable

because it would not require additional real property or moving OR 551. You have also stated that the current alternatives are unrealistic or unnecessary because they seek to obtain “perfect compliance” with FAA standards. But that, in your opinion, perfect compliance is not required. Rather, FAA has an obligation to consider any modifications requested by the ODAV. You also explained that your clients are extremely concerned with the investment that they have put into this airport and their relationship with ODAV. We take all input and comments seriously.

Please know that the agency’s consultant does intend to prepare a response to your letter which will be added to the record for the next PAC meeting. But, also, as we discussed, we hope that some of your concerns are alleviated as we explained that any project would be phased, meaning that some of the proposed improvements in the selected alternatives could be built as funding is secured for that phase. We also attempted to clarify that ODAV has no present intention of acquiring by condemnation the areas that are marked “reserve” in any of the alternatives. Rather, these are designated as reserve so that ODAV may apply to FAA for federal funds to acquire these properties, should they become available to be used for a future aviation use. Finally, we attempted to explain that FAA has worked with ODAV to identify the standards that ODAV must comply with and it is apparent that FAA will not approve a modification. As Tony explained, FAA has denied ODAV’s attempts to seek modifications in the past. Furthermore, any modification would be temporary and would not present a permanent solution to the need for new development at the airport. As promised, we will locate the documents pertaining to ODAV’s application to FAA and its response and provide you with copies!

Thank you again for meeting with us today. I look forward to seeing you in a few weeks and to working together on this and other important projects.

Thanks again Wendie!

Kenji

Aurora State Airport Master Plan Website Comments

Name	Wendie Kellington
Organization	Kellington Law Group
Comments or questions?	We represent TLM holdings. (1) ODAV's alternatives first presented 7/31/24 stated they were all premised on the claim that FAA said no runway extension could occur unless the Highway 551 ROFA design standard was first met. That is incorrect and that incorrect premise drove all of ODAV's binary 7/31 alternatives. Further, the highway is just 32 feet off of perfect ROFA compliance and ODAV appears to have been unaware that there is plenty of room in the ROW to move the highway to meet the ROFA without taking homes or businesses, because the binary choice ODAV presented was either taking a bunch of homes/businesses to move Hwy 551 west or wiping out significant aeronautical uses at the airport by moving the RW east. Both of those draconian alternatives ODAV presented are wholly unnecessary. (2) FAA never said that no r/w extension can occur without the ROFA first being met. They will absolutely allow the RW to be extended without perfect ROFA concurrent compliance. They just want the master plan to show the ROFA being met by the end of the planning period if funding becomes available. (3) The airport's aeronautical stakeholders presented an airport MP alternative that extended the RW north in the short term to serve the decade-plus long need for safe existing aircraft operations, provided a fully documented MOS demonstrating unequivocally that MOS standards were met, contemplated HWY 551 be moved the 32 ft west after the RW extension happens, and later in the MP planning period and within the existing ROW (taking no homes/businesses), if funding is available. (4) FAA will in fact allow the r/w to be extended without perfect prerequisite ROFA compliance, and ODAV mistakenly presented alternatives premised on the opposite conclusion it attributed to

	FAA. ODAV must present alternatives to the PAC that are in fact consistent with FAA directives. Otherwise, ODAV fails to comply with its citizen involvement/stakeholder involvement obligations. The aeronautical stakeholders alternative with fully justified MOS must be included as an option in a suite of real properly premised alternatives returned to the PAC for comment. (4) Respectfully, there is no justification for any alternative that wipes out any aeronautical uses. Hwy 551 can be moved west within the existing ROW at the end of the MP planning period with minimal private property impacts. Wiping out any aeronautical uses is simply unacceptable and is contrary to ORS 836.640-642 governing ODAV and the entire point of this master planning effort to serve aeronautical uses. Relatedly, there is no justification for each alternative demanding that the septic drainfield to the south be moved to some unknown location that may not even feasibly exist. As the geotechnical report in the record demonstrates, modest improvements to that drainfield make it comply with FAA standards. Nothing justifies moving it. Thank you. I would like to receive email updates.

Hello Wendie,

Thanks for your request. The website has been updated with the video, as well as the transcript which includes the full chat and Q&A record. You can find everything at https://publicproject.net/AuroraAirport# on the "meetings" page.

Please let us know if you have any other questions.

Thanks,

RE: Feedback to Preferred Alternative - Aurora Airport Master Plan

Per the invitation at the October 15, 2024, PAC meeting, this comment is submitted by Airport Stakeholders who are PAC members as well as is submitted by the entirety of the Aurora Airport Improvement Association (AAIA). AAIA is the organization of the private airport stakeholders including but not limited to:

- Atlantic Aviation
- TLM Holdings
- Wilson Construction Company
- Kory McGregor
- Blue Skies Aviation
- Tim Warren
- George VanHoomison
- Helicopter Transport Services

This is the Airport Stakeholders feedback to ODAV/Century West on "Preferred Alternative" presented during the October 15, 2024, PAC Meeting.

1. ODAV's preferred alternative needlessly punts indefinitely the desperately needed runway extension, inexplicably relocates the internal access road from where it is already partly constructed (wasting the investment in the existing internal road infrastructure) and where it was approved in the 2012 master plan to a location that dangerously parallels an active taxiway, destroys the septic drainfields necessary for the $300 million in private investment at the airport to continue to support the airport's 1,500 jobs, unnecessarily takes critically needed airplane parking, unnecessarily takes property from people on both sides of the airport, while wholly neglecting ODAVs duty as steward of the airport to keep it safe and nurture the economic engine that the legislature directed ODAV support. ODAV's preferred alternative is contrary to law and ODAV's responsibilities. ODAV's claim "the airport MUST be brought into standards as per the FAA" is simply wrong. We have explained in detail that FAA must and will consider a MOS to enable the runway extension (which will be temporary until ODAV moves Highway 551 thirty feet west in the existing ODOT right-of-way). During the last PAC meeting FAA did not claim otherwise. Rather,

the FAA representative specifically stated the FAA is not directing ODAV what to write and that the agency simply wanted a pathway to design standard compliance. Those words mean FAA will (as it must) allow the runway to be extended so long as the master plan contemplates moving Highway 551 when funding becomes available to do so.

2. The preferred alternative is a nonstarter for the following reasons.

    a. The acquisition of the properties is unfair in that

        i. Acquisition is apparently planned to violate the law. Instead of paying fair market value as the law requires, David Miller, the lead consultant during the PAC meeting – explained rates to be paid for the properties will not be the fair market values, the paid rates will be the tax roll valuations. (Which is a significantly lower price.) Even though this is unlawful, the statement of intention to acquire private property at unlawful law ball prices sets up the area for precondemnation blight.
        ii. ODAV (Tony Beach) stated in a direct conversation that it will not pay for relocation costs for affected properties.
        iii. ODAV will also not pay for business disruption costs. If the alternative proceeds the airport and affected privately owned areas will be blighted.

    b. ODAV is completely failing

        i. To defend investment as called for in ORS 836.642, (3), (e), "Preserve investments in pilot sites…"
        ii. To recognize that more than half of the entire airport is made up of privately owned property, upon which private investment provides nearly 1500 family wage paying jobs. A significant portion of which could be lost if the preferred alternative is adopted.

    c. The "Vehicle Service Road" (VSR) is poorly thought out, damaging and unnecessary.

        i. Previous Master Plan updates to include the 2012 ALP approved by the FAA, showed and Internal Circulation Road (ICR) the underlying land for which is largely currently available at no cost to ODAV now and is partially constructed per the 2012 master plan. The ICR was designed for fuel trucks, tugs, official agency vehicles, private vehicles, and 3rd party vendor delivery vehicles. Most of the ICR was set back from the ramp and the taxiway, reducing the probability of a Vehicle Pedestrian Deviation (VPD) or a collision event.

ii. The VSR anomalously parallels the active taxiway, and the preferred alternative omits the ICR that works and that had previously been planned to be improved to work even better to serve the private investment at the airport. Without an answer to the question put to ODAV, "Who will be allowed to operate a vehicle on the VSR?", it appears that ODAV will only allow fuel trucks, tugs, ODAV and FAA vehicles on the VSR, again seeming to turn a blind eye to the needs of the private aeronautics' investors at the airport and the 1500 family wage jobs they created and, until now at least, have maintained. And its responsibilities assigned by the legislature under ORS 836.640-642,

d. Neither ODAV (nor the FAA) have identified any funding source to pay for anything in the preferred alternative, essentially making this Masterplan and its subsequent Airport Layout Plan completely unachievable, ultimately useless and a colossal waste of taxpayer money. ODAV has failed to discharge its responsibility to establish a meaningful and achievable master plan outlined in a of number federal rules to include:

i. AC 150/5070-6B, Part I, Chapter 1, 101. - "The technical steps described in this AC are generally applicable, although each step should be undertaken only to the extent necessary to produce a **MEANINGFUL** (emphasis added) product for a specific airport."
ii. AC 150/5070-6B, Part I, Chapter 1, 104., b. – "The FAA strongly encourages that planners consider the possible environmental and **SOCIOECONOMIC** costs associated with alternative development concepts, and the possible means of **AVOIDING, MINIMIZING OR MITIGATING IMPACTS** to sensitive resources at the appropriate level of detail for facilities planning."
iii. AC 150/5070-6B, Part I, Chapter 1, 104., c. 5) – "Propose an **ACHIEVABLE** financial plan to support the implementation schedule."

3. It is also frustrating that a group of airport stakeholders asked to have a meeting with ODAV and its consultants to discuss an alternative the stakeholders presented on the record that is wholly consistent with the 2012 master plan, constructs in the short term the runway extended on an approvable MOS, and includes a plan to move Highway 551 west the magic 30 feet in the existing right-of-way, when funding is available to do so. It also maintains the existing drainfields merely requiring that they be brought to compliance with FAA standards as demonstrated is wholly achievable by an uncontroverted geotechnical report in the record.[1] ODAV has made it clear that it has no

[1] ODAV asserted with no evidence, that is zero support that compliance was infeasible. Reliance upon that and other unsupported assertions are disappointingly ODAV's theme in this master plan effort.

interest in the airport stakeholders' meaningful, achievable and much less expensive master plan alternative. Rather:

a. The Airport Stakeholders were told by the Director of ODAV that ODAV would not meet to discuss it outside of a PAC meeting and explained that any discussions of ideas would only happen during, and in full view of the public, a live PAC meeting.
b. As directed by ODAV's director, the Airport Stakeholders waited for the October 15, 2024, meeting to discuss the stakeholders master plan alternative (presented on September 3, 2024, and ignored to date).
c. We asked during that PAC meeting to discuss our proposal and were then told by ODAV's Tony Beach that the proposal had been dismissed by ODAV and the consultant for no reason other than the unsupported conclusion that it was "not possible". And any consideration or discussion of the Stakeholders' alternative was completely foreclosed in the PAC meeting forum.
d. ODAV and the consultants presented the ODAV preferred alternative and next steps to the PAC with no PAC discussion of the stakeholders' alternative. This appears to the PAC, that its input is unwelcome and the entire process pro forma. The only conclusion is that ODAV's decision was already made, and that stakeholder input has been and was always intended to be window-dressing, nothing more.
e. After the PAC Meeting, the airport stakeholders expressed frustration with not being allowed to discuss the proposed stakeholder alternative during the PAC meeting. ODAV merely gave a giant bureaucratic shrug.

4. Anyone can see this Master Plan effort is a sham, has a pre-determined outcome, and public or PAC member input is viewed as a nuisance level necessity

a. It is apparent ODAV, the consultants have decided how the final master plan shall be completed – the preferred alternative is not about airport safety, airport efficiency, aeronautical advancement for the future, economic development, family wage jobs, but about destroying the through the fence operations at the airport. But ODAV must understand, they are in that single minded focus destroying the Goose that laid the golden economic development egg that until now has been the Aurora Airport and importantly they are violating the legislative command of ORS 836.640-642.
b. ODAV's tone deafness to input and the law rests on false assumptions that the FAA can and does demand perfect airport design standard compliance before the runway may be extended, even though it is clearly a real safety issue to ignore the needed runway extension, and the safety risk of imperfect design compliance is almost infinitely minute:

i. The landing risk is “one incident in every 16.7 trillion landings, the time between occurrences is calculated as 16 trillion landings divided by 45,115 landing operations per year which equates to one incident every 369,000 years.”
ii. The landing roll risk is “one incident in every 12.5 million landings, the rate of occurrence is calculated as 12.5 million landings divided by 45,115 landings per year which equates to one incident every 277 years” at worst or more likely “one incident in every 16.7 million landings, the rate of occurrence is calculated as 16.7 million landings divided by 45,115 landings per year which equates to one incident every 369 years.”
iii. The takeoff roll phase, the risk is “one incident in every 45.5 million takeoffs, the rate of occurrence is calculated as 45.5 million takeoffs divided by 45,115 takeoffs per year which equates to one incident every 1,008 years.”
iv. The landing roll phase risk to taxiway is “one incident in every 11.1 million landings, the rate of occurrence is calculated as 11.1 million landings divided by 45,115 landings per year which equates to one incident every 246 years.”

5. You are no doubt aware that FAA is required to consider and approve a MOS “when necessary to meet local conditions” so long as the “modification will provide an acceptable level of safety, economy, durability and workmanship.” (*See,* 14 CFR § 152.11(b)).

    a. That has been proven by the Airport Stakeholders alternative that ODAV is ignoring.
    b. The design standards for which ODAV claims FAA demands perfect prerequisite compliance for any runway extension applies to all airports in the US. The FAA routinely approves MOS for large airports nationwide some with genuine safety concerns. Nothing suggests Aurora has some super anomaly warranting the disparate treatment ODAV claims FAA demands. Rather, as shown above, the risk of 30 feet of imperfection until funding is available to move Highway 551 is ridiculously small.

6. ODAV’s decisions were made before presenting information to the PAC, specifically evident in the facts surrounding the previous two PAC meetings.
    a. Refined Alterantives 1A, 1B and 2 were NOT allowed to be seen by PAC members or the public for meaningful review BEFORE the July 31, 2024, PAC meeting.
    b. The Preferred Alternative was not allowed to be seen by the PAC members or the public for meaningful review BEFORE the October 15, 2024, PAC meeting.

7. ODAV has lost its way. ODAV should pause the process and park the preferred alternative until such time that:

    a. ODAV and consultants set up an in-person work session for the ENTIRE PAC where proposals that bring a win-win situation for everyone could be JOINTLY developed.
    b. ODAV works collaboratively with the FAA, and the PAC to define a path forward that provides as safe airport, respectful of surrounding communities, protects the investment in private property both on and off the airport, and follows the law to include ORS 836.640-642.

Sincerely,

Tony Helbling - PAC Member
Ted Millar - PAC Member

Brandy and Thomas,

Will you please direct me to where I may go to view the various public comments that have been submitted for the KUAO Master Planning effort? The below screenshot is from today and says there have only been two comments received for the entire effort. We all know that is wrong. I have submitted more documents than is listed below, as have others I work with; and we are aware that others beyond that have commented as well. Moreover, at the last PAC meeting, Tony Beach said that some people (including the Wilsonville Mayor) had contacted him outside of the MP process and that he was going to post those comments. But none of that has happened. Kenji assured me that public comments would be made available two months ago. If they are available, please direct me to where they are. If they are not, please post them or let me know where I can go to view them. It is really important to meaningful participation that all comments are available somewhere. This is time sensitive. Thank you. Wendie Kellington

Re: December 23, 2024 Comment Letter on Behalf of Aurora Airport Improvement Association and TLM Holdings, LLC, Regarding the Aurora State Airport Master Plan – ODAV Proposed Preferred Alternative

Mr. Thomas, Mr. Beach and Ms Steffen,

This letter is written on behalf of the Aurora Airport Improvement Association (AAIA), whose members include Aurora Airport aviation private business stakeholders, and one of AAIA's members TLM Holdings, LLC, who is also a PAC Member, together referred to herein as "Aeronautical Stakeholders". Please include this letter in the record for the Oregon Department of Aviation's (ODAV) proposed "Preferred Alternative" for the Aurora State Airport Master Plan. We applaud Director Sugahara's statement that ODAV understands that the "Preferred Alternative" for the Aurora Airport Master Plan is widely opposed and his commitment that ODAV is willing to modify it. It is mission critical that ODAV modify the "Preferred Alternative" if the Aurora Airport is to continue to deliver significant tax benefits, family wage jobs, emergency resiliency and aeronautical innovation to the region and state. The current version of ODAV's proposed Preferred Alternative is inconsistent with these objectives.

EXECUTIVE SUMMARY OF REQUESTS

The Preferred Alternative should be modified to reflect the Aeronautical Stakeholders' Alternative that was previously submitted and that is attached (Exhibit 1) in an updated, annotated form. The attached Aeronautical Stakeholders Alternative is consistent with ODAV's stated wishes to extend the runway by 500 feet to the north and move the airport toward FAA design standard compliance. A significant difference between ODAV's current Preferred Alternative and the Stakeholders' Alternative, however, is that the Stakeholders' Alternative does not

carry ODAV's $150 million (plus) price tag to condemn the Aurora Airport front line aircraft hangars for which the owners have invested more than $200 million and thereby created millions in tax revenue, created more than a 1000 good jobs and millions of dollars in direct and indirect tourist revenue for surrounding communities. ODAV's final Preferred Alternative must:

1. Remove the taking of the frontline hangars and remove the "Aeronautical Reserve" designation across the rest of the privately owned property at the airport.
2. Remove the proposed new taxi lane that isn't required by the FAA and makes no aircraft safety, efficiency or policy sense.
3. Remove the new commercial service road adjacent to the proposed new taxiway that also isn't required by the FAA. Replace it with the internal service road that was approved in the 2012 Master Plan and that as shown on the Stakeholders' Alterative is partially built and would cost ODAV nothing but the cost of some pavement.
4. Leave the drainfields in place because when improved, they are allowed in the RSA and are essential to the continued functioning of the airport. ODAV should simply require HDSE to bring the South Drainfield to meet FAA Design Standards.
5. Be developed in a collaborative in-person meeting that allows real discussion among stakeholders to occur to work out details so that the "Preferred Alternative" that emerges enables the airport to be successful and safe over the next 20 years and avoids needless, years-long litigation continuing the airport's languishment from neglect.

EXPLANATION

ODAV is Bound by ORS 836.640-642

ODAV must understand that it is bound by ORS 836.640-642, which is a statute developed by Business Oregon and adopted by the legislature to strongly encourage private investment at the Aurora Airport and that commanded ODAV to carry out that objective. ODAV's "Preferred Alternative" is in direct contravention of those statutes. The Aeronautical Stakeholder's Alternative (Exhibit 1) is consistent with that statute and reflects good aviation policy and safety.

Contrary to that statute, ODAV's proposed alternative contemplates ODAV taking by eminent domain the frontline hangars at the airport and authorizes for public acquisition all other private property at the Aurora Airport. ODAV's plan to wipe out the front line aircraft hangars has an unnecessary and staggering $150 million plus public price tag. It unwisely seeks to bulldoze these important business aircraft hangars for which the owners have invested more than $200 million,

created millions in tax revenue, more than a 1000 good jobs and millions in directly and indirectly related tourist revenue for surrounding communities, with ORS 836.640-642 as the catalyst. It anomalously designates areas that have been set aside in airport master plans for private airport related development since 1976, as areas for ODAV acquisition instead of planning for them to be developed with private airport related uses by bringing them into the airport boundary as contemplated by ORS 836.640-642.

Both elements of the preferred alternative are misguided. Among other objectives for the Aurora Airport, ORS 836.642 requires ODAV to "Preserve investments [at the Aurora Airport] and the level of service provided by [the Aurora Airport]" and to "promote economic development" at Aurora "by creating family wage jobs, increasing local tax bases" through support of private aviation-related uses so that they may "develop and thrive." The preferred alternative is contrary to ORS 836.640-642 and expressly seeks to trade the private investment that the statute seeks to encourage and grow, for government condemnation and government ownership.

ODAV's Preferred Alternative Gambles with the Aurora Airport's Success, Risking Sending it Backwards and Making it Less Safe

ODAV's preferred alternative gambles with the economic benefits that private investment at the airport has delivered, risking their continuation. The threat of ODAV condemnation, not to mention ODAV actually engaging in such litigation against those owners, presents an unacceptable risk of driving away not only those aircraft hangar owners, but also their businesses, jobs and related tax and tourist revenue. Once they are gone, the stigma of such ODAV action makes the airport and indeed any airport that ODAV manages, a private investment pariah – potentially for decades. Such a risk should not be taken where, as here, a state statute commands ODAV otherwise and there are alternatives. The Stakeholders Alternative demonstrates that viable alternatives are available that carry a fraction of the cost of ODAV's preferred alternative and come with none of the risks.

It is respectfully submitted that the justification for ODAV's "preferred alternative" does not warrant its deleterious effects.

ODAV's Desire for a Vehicle Service Road (VSR) and New Taxiway Cannot Justify ODAV's Preferred Alternative. ODAV has Failed to Consider Better and Less Costly Alternatives for a VSR and new Taxiway

ODAV's desire for a "vehicle service road" (VSR) and a new aircraft taxiway are driving ODAV's desire to condemn the frontline hangars. But neither objective necessitates ODAV's Preferred Alternative, and neither are required by FAA. In

fact, if FAA were doing its job, it would be advising ODAV against both on their astonishing cost alone.

Regarding the VSR, the airport's 2012 master plan approved a VSR that has none of ODAV's Preferred Alternative's deleterious effects and does not carry a $150 million condemnation price tag. At worst, the 2012 VSR costs the state some pavement. The private aeronautical stakeholder owners have offered ODAV the land needed for the 2012 MP VSR free of charge. We are unaware of any reason for ODAV to not pursue that 2012 MP VSR and there are only good reasons to do so. **Let that sink in: ODAV's current "Preferred Alternative" seeks to trade $150 million of the public's money, risk more than 1,000 jobs, millions in tax and tourist revenue just to save some $20,000 on pavement.** The idea is untenable, not to mention unacceptably wasteful and wholly unnecessary.

Similarly, if a new taxiway is required (and ODAV has not shown that it is), ODAV has utterly failed to explore reasonable options for such a new taxiway. ODAV says that it cannot put a new taxiway anywhere but where the ODAV "Preferred Alternative" puts it because ODAV does not own land elsewhere for a taxiway. This is insincere and disingenuous. ODAV **does not own the land where it wants the "Preferred Alternative" taxiway either** – that is why it is showing ODAV condemning the front line hangars. Moreover, many other features of ODAV's proposed alternative are on land ODAV does not own. ODAV simply has made no effort to come up with a less devastating and less expensive alternative. Even if ODAV had to acquire some private land for a new taxiway, ODAV can and must explore alternatives having far less adverse impact on the continuation and growth of private aeronautical investment at the airport, not to mention a price tag well south of the $150 million plus for ODAV's Preferred Alternative.

ODAV Does not "Want" to Expand the Airport Boundary

ODAV asserts that it simply does not "want" to extend the airport boundary to include the land that is now and has long been foreseen for private airport-related development. Instead, ODAV wants to designate that land for ODAV acquisition claiming that only this will "ensure" that land is put to aeronautical use. This claim cannot be insincere and is disingenuous. ODAV acquisition does nothing to put land at the airport to aeronautical use. Further, the private sector has put all of the land that it could into airport related uses and has been trying to put the rest to aeronautical use with no help from ODAV. Per ORS 836.640-642, the way ODAV ensures that land is developed with aeronautical use, is to expand the airport boundary to include such land. ODAV ownership does nothing to further that goal. Instead, as commanded in ORS 836.640-642, ODAV must expand the airport boundary to include the remaining undeveloped land at the airport that has been designated i*n every master plan since 1976 as suitable for airport development*. Not "wanting" to do so is no justification and is contrary to ORS 836.640-642.

ODAV Has Failed to Meaningfully Engage Airport Stakeholders in the Development of Airport Alternatives

Contrary to the federal requirements cited in prior submittals, ODAV has failed to meaningfully engage airport stakeholders in ODAV's process for developing the "Preferred Alternative."

ODAV has improperly insisted upon remote meetings only, where it mutes speakers when ODAV is done hearing from them, but allows ODAV and its consultants to speak without limits, including to break into discussions by stakeholders, undermine stakeholder points, and failing to allow any discussion or iterative response.

ODAV has to date completely failed to consider the Airport Stakeholders' Alternative and has given no rational reason for failing to adjust the airport boundary to support airport related development. ODAV has insisted upon PAC members being locked in stone, despite PAC members designating legal counsel and others to participate as their representative. ODAV has even insisted upon deceased persons holding precious aviation-stakeholder PAC member seats.

The lack of any sincere ODAV effort at engagement is well-illustrated by the fact that 13 minutes before the close of business on Friday December 19, the last business day before the close of the final ODAV "Preferred Alternative" comment period, ODAV's consultant for the first time responded to an important issue raised at the December 10, 2024 "PAC" meeting, proving a link and inviting PAC members to review the materials at the link. That link led to completely unhelpful further links leading to materials dozens of pages in length. Clearly, ODAV had no interest in the Aviation Stakeholders' concerns and even less interest in a meaningful response from the stakeholders on the issue.

The underlying issue was and is an important one. It involves ODAV's "Preferred Alternative" eliminating with no reasonable alternative, the HDSE septic drain field that is critical to the continued viability of the private development (and jobs) at the airport. The airport stakeholders have provided undisputed evidence that the HDSE drainfield can be strengthened to meet FAA standards to remain in the RSA. ODAV responded on December 10, 2024 with vague, unsupported claims that the drainfield must be removed. The links provided by ODAV's consultant at 4:47 pm on December 20, 2024 do not demonstrate what, if any, problem it is that ODAV has with the stakeholders' supporting information for the drainfield to be improved and remain in place. If there is an issue, ODAV should engage with the Stakeholders to discuss it. Clearly, a drainfield is essential to support the airport's good jobs and the businesses that go with them. Ostensibly ODAV would have an interest in preserving those economic attributes and discussing, in a meaningful way, how the drain field can be improved to remain in

place consistent with FAA standards. Assuming ODAV has such an interest – and ORS 836.640-642 compels ODAV to have such an interest, ODAV should meet with the stakeholders to work the issue out. It will not be particularly hard or time consuming to do so.

FAA Admits that the Runway Can be Extended, that an MOS Can be Approved and that the Master Plan need only Show Incremental Movement toward FAA Design Standard Compliance

On December 10, 2024 FAA admitted that (1) it can approve a MOS, (2) that the runway can be extended on a MOS, and (3) that the master plan need only show progress toward meeting FAA design standards. Airport Planner Aron Faegre has submitted comments this date explaining that the MOS for the runway extension can not only be approved but it in fact must be shown on the ALP- as it was shown on the approved 2012 ALP. We join those comments. There is no reason for the Preferred Alternative to continue to hold the runway extension hostage to Hwy 551 moving 30 feet (or however far ODAV wants it to move) west. Moving Hwy 551 can occur later when and if funding for the same is provided. That is what the law says. That is what the master plan should contemplate. Importantly, that is the only truly safe way forward.

Need for a Meaningful Meeting to Discuss a Tenable Preferred Alternative for the Aurora Airport

Given the success of the airport and the commands of ORS 836.640-642, ODAV's approach to the development of the "Preferred Alternative" to date is nothing short of puzzling. The master plan has a 20-year planning horizon and should ensure Aurora Airport's continued growth and success over that horizon. ODAV should meet, in person, with the Aeronautical Stakeholders and explore a more normative and economically reasonable preferred alternative that is consistent with ORS 836.640-642. Exhibit 1, the Stakeholder's Alternative, is a good starting point for that discussion.

Thank you for your consideration.

Very truly yours,

Wendie L. Kellington

Please register and make part of the master plan record, my **very strong objection** to the "taking" of any privately owned hangars on the Aurora Airport.

There is a significant shortage of hangars. We don't need less hangars – we need more! The hangars sited for destruction are all currently providing significant employment.

The two motivations for the proposed destruction are:

- A vehicle lane would work MUCH better as far as possible away from the taxiway
- The parallel taxi-lane is unnecessary, and very similar results could be achieved with ODAV purchasing only 1 acre from a willing seller.

I recommend airport safety improvements, but only with **NO DESTRUCTION** of any hangars.

Thank you,
Jan Moon

Comments or questions?	1. Why is Lower Boones Ferry Road not included in alternatives? 2. I'm very concerned for small business owners like us. An extended unavailability of the airport will have dire consequences to our business. We can't all go to neighboring airports. 3. We're obviously pro airport. We'd like to see additional or expanded alternatives, more out-of-box brainstorming. I would like to receive email updates.

Aurora State Airport Master Plan Website Comments

Name	Kirsten Newbury
Organization	Eagle Simulator, LLC
Comments or questions?	I logged into the Master Plan presentation last Tuesday evening. I was dismayed by the obvious lack of collaboration between the Planners and the airport tenants. The meeting grew somewhat contentious, primarily due to airport tenants not believing their objections or ideas were listened to. And, it seemed to me the tenants didn't believe ODAV had served as an advocate for them. Several airport advocates provided examples of airports in the PNW that do not conform to FAA requirements but do have authorized variances. Several tenants cited areas where they disagree with the preferred plan but offered alternative ideas instead. Tenants again cited the historical public-private cooperative partnership enjoyed by the airport that sadly does not appear to be recognized in the Plan. And what happened to apparently reasonable ideas like moving the airport fencing west rather than the much more expensive option of building more road surface, much less invoking eminent domain and actually moving the road west. On a good note, I see this as a leadership opportunity for Kenji Sugahara to step in and

	bring the two sides together with a goal of tweaking the current plan through in-person discussion, brain storming, and consensus building to achieve a workable Master Plan. Hurray for the Mayor of Canby who submitted a statement attesting to the economic value of the airport to his community. Hurray for the on airport business owners willing to partner with ODAV for workable solutions. Hurray for the government-business partnerships that already exist, like with providing the Civil Air Patrol with permanent headquarters. Or for providing hangar and hub operations for ODART. Please, I urge ODAV not to turn away from the voiced dissatisfaction we heard Tuesday night but to embrace it as an impetus to move forward, together. The Aurora Airport is too important a resource to allow these dissents to fester. I would like to receive email updates.

Re: Aurora State Airport Master Plan Proposed Preferred Alternative

Mr. Thomas,

Please enter this letter into the record for the Oregon Department of Aviation's (ODAV) proposed "Preferred Alternative" for the Aurora State Airport Master Plan. We support Director Sugahara's statement that ODAV is willing to modify its Preferred Alternative for the Aurora Airport Master Plan. We believe that it is important that ODAV do so, to enable the airport to continue to deliver significant tax benefits, family wage jobs, emergency resiliency and aeronautical innovation to the region and state. The current version of ODAV's proposed Preferred Alternative is inconsistent with these objectives.

ODAV is bound by ORS 836.640-642 which was developed by Business Oregon. That statute strongly encourages private investment at the Aurora Airport and commands ODAV to carry out that objective. Contrary to that statute, ODAV's proposed alternative contemplates ODAV taking by eminent domain the Aurora Airport front line aircraft hangars for which the owners have invested more than $200 million, created millions in tax revenue, more than a 1000 good jobs and millions in directly and indirectly related tourist revenue for surrounding communities, with ORS 836.640-642 as the catalyst.

Against this backdrop, the "Preferred Alternative" anomalously designates areas that have been set aside in airport master plans for airport related development since 1976, as areas for ODAV acquisition instead of bringing them into the airport boundary established by ORS 836.640-642 for development for airport related uses and wipes out the front line hangars.

Both elements of the preferred alternative are misguided. Among other objectives for the Aurora Airport, ORS 836.642 requires ODAV to "Preserve investments [at the Aurora Airport] and the level of service provided by [the Aurora Airport]" and to "promote economic development" at Aurora "by creating family wage jobs, increasing local tax bases" through support of private aviation-related uses so that they may "develop and thrive." The preferred alternative is contrary to ORS 836.640-642 and expressly seeks to trade the private investment that the statute seeks to encourage and grow, for government condemnation and ownership.

Concerningly, ODAV's preferred alternative significantly gambles with the significant economic benefits that private investment at the airport has delivered, risking their continuation. The threat of ODAV condemnation, not to mention ODAV actually engaging in such litigation against those owners, presents an unacceptable risk of driving away not only those aircraft hangar owners, but also their businesses, jobs and related tax and tourist revenue. Once they are gone, the stigma of such ODAV action could make the airport and indeed any airport that ODAV manages, a private investment pariah for decades. Such a risk should not be taken where, as here, a state statute commands ODAV otherwise and there are alternatives.

It is respectfully submitted that the justification for the "preferred alternative" simply does not justify its deleterious effects. ODAV is on record stating that these harmful consequences only flow from ODAV's

22253 Yellow Gate Lane Northeast | Aurora, Oregon, U.S.A.

desire for a "vehicle service road" (VSR) and a new aircraft taxiway. But neither necessitates the preferred alternative.

Regarding the VSR, the 2012 master plan approved a VSR that has none of the Preferred Alternative's deleterious effects and does not carry a $200 million condemnation price tag. At worst, the 2012 VSR costs the state some pavement. Moreover, we are advised that the private aeronautical stakeholder owners have offered ODAV the land needed for the 2012 MP VSR free of charge. We are unaware of any reason for ODAV to not pursue that 2012 MP VSR and we can only see good reasons to do so.

We are further advised that there are alternatives for a new taxiway that ODAV has not explored. We understand that ODAV has not explored any such alternatives because it does not own the land needed for a taxiway to be located elsewhere. However, so far as we know this has never been an impediment previously to the development of the Aurora Airport and should not be an impediment now. Many features of the proposed alternative are now contemplated on land that ODAV does not own – including the taking of the frontline hangars. Even if ODAV had to acquire some private land for a new taxiway, ODAV should explore such alternatives having the least adverse impact on the continuation and growth of private aeronautical investment at the airport, not to mention a price tag well south of the $200 million under the Preferred Alternative. Finally, we are advised that ODAV simply does not "want" to extend the airport boundary to include the land that is now and has long been foreseen for airport-related development in the airport boundary. Such a justification if true, would obviously be contrary to ODAV's mission and responsibility to enable the Aurora Airport to grow with aviation-related uses.

We are frankly perplexed by these problems given the success of the airport and the commands of ORS 836.640-642. ODAV should be eager to develop a master plan that ensures the Aurora Airport's continued growth and success over the master plan's 20-year horizon. If these problems that risk sending the airport backwards by decades arise from a lack of meaningful airport stakeholder engagement in the development of the preferred alternative, then ODAV should meaningfully engage. But whatever the reason, we strongly encourage ODAV to dismiss the Preferred Alternative and to meet with the airport stakeholders and to explore a more normative and economically reasonable preferred alternative that is consistent with ORS 836.640-642.

Thank you for your consideration.

Sincerely,

Lukas Nickerson

Aurora State Airport Master Plan Website Comments

Comments or questions?	As a local resident, I am highly concern on this project. My daily work and personal life depend on traveling through the Arndt Rd into Canby and to access the Freeway through Portlan-Hubbard Hwy, just like many others that live in my community at Century Meadows. This project would impact greatly our commute, specially when taking kids into school. Making the airport accessible to larger aircraft would raise hazard concerns driving near by any of those aircraft. Which also includes the higher levels of pollution. Specially for the existing area, since there are many water bodies in the area, the increase of jet fuel could affect the environment as well as the health of people and animals that live in the surrounding areas. Increased of noise of large aircraft can also impact people's health affecting sleep patterns and kids' ability to study.

Subject: Aurora Aviation Master Plan - Hangar Removal Objection

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

There is already a severe shortage of hangars at Aurora State airport. With the currently proposed Master Plan many additional hangars will be destroyed. This will devastate the owners as well as the people that are employed at these facilities. This will decimate the current thriving economy of the airport.

Instead of the current plan we urge you to:

1. Move the vehicle lane farther east from the runway or use the current Airport Road NE

2. The parallel taxi lane on the west side of the runway is not needed

As a pilot and hangar owner at Aurora I recommend airport safety improvements but only with no destruction of any hangars. Thank you for your consideration.

Re: Aurora State Airport Master Plan Proposed Preferred Alternative

Mr. Thomas,

Please enter this letter into the record for the Oregon Department of Aviation's (ODAV) proposed "Preferred Alternative" for the Aurora State Airport Master Plan. We support Director Sugahara's statement that ODAV is willing to modify its Preferred Alternative for the Aurora Airport Master Plan. We believe that it is important that ODAV do so, to enable the airport to continue to deliver significant tax benefits, family wage jobs, emergency resiliency and aeronautical innovation to the region and state. The current version of ODAV's proposed Preferred Alternative is inconsistent with these objectives.

ODAV is bound by ORS 836.640-642 which was developed by Business Oregon. That statute strongly encourages private investment at the Aurora Airport and commands ODAV to carry out that objective. Contrary to that statute, ODAV's proposed alternative contemplates ODAV taking by eminent domain the Aurora Airport front line aircraft hangars for which the owners have invested more than $200 million, created millions in tax revenue, more than a 1000 good jobs and millions in directly and indirectly related tourist revenue for surrounding communities, with ORS 836.640-642 as the catalyst.

Against this backdrop, the "Preferred Alternative" anomalously designates areas that have been set aside in airport master plans for airport related development since 1976, as areas for ODAV acquisition instead of bringing them into the airport boundary established by ORS 836.640-642 for development for airport related uses and wipes out the front line hangars.

Both elements of the preferred alternative are misguided. Among other objectives for the Aurora Airport, ORS 836.642 requires ODAV to "Preserve investments [at the Aurora Airport] and the

level of service provided by [the Aurora Airport]" and to "promote economic development" at

Aurora "by creating family wage jobs, increasing local tax bases" through support of private aviation-related uses so that they may "develop and thrive." The preferred alternative is contrary to ORS 836.640-642 and expressly seeks to trade the private investment that the statute seeks to encourage and grow, for government condemnation and ownership.

Concerningly, ODAV's preferred alternative significantly gambles with the significant economic benefits that private investment at the airport has delivered, risking their continuation. The threat of ODAV condemnation, not to mention ODAV actually engaging in such litigation against those owners, presents an unacceptable risk of driving away not only those aircraft hangar owners, but also their businesses, jobs and related tax and tourist revenue. Once they are gone, the stigma of such ODAV action could make the airport and indeed any airport that ODAV manages, a private investment pariah for decades. Such a risk should not be taken where, as here, a state statute commands ODAV otherwise and there are alternatives.

It is respectfully submitted that the justification for the "preferred alternative" simply does not justify its deleterious effects. ODAV is on record stating that these harmful consequences only flow from ODAV's desire for a "vehicle service road" (VSR) and a new aircraft taxiway. But neither necessitates the preferred alternative.

Regarding the VSR, the 2012 master plan approved a VSR that has none of the Preferred Alternative's deleterious effects and does not carry a $200 million condemnation price tag. At worst, the 2012 VSR costs the state some pavement. Moreover, we are advised that the private aeronautical stakeholder owners have offered ODAV the land needed for the 2012 MP VSR free of charge. We are unaware of any reason for ODAV to not pursue that 2012 MP VSR and we can only see good reasons to do so.

We are further advised that there are alternatives for a new taxiway that ODAV has not explored. We understand that ODAV has not explored any such alternatives because it does not own the land needed for a taxiway to be located elsewhere. However, so far as we know this has never been an impediment previously to the development of the Aurora Airport and should not be an impediment now. Many features of the proposed alternative are now contemplated on land that ODAV does not own – including the taking of the frontline hangars. Even if ODAV had to acquire some private land for a new taxiway, ODAV should explore such alternatives having the least adverse impact on the continuation and growth of private aeronautical investment at the airport, not to mention a price tag well south of the $200 million under the Preferred Alternative. Finally, we are advised that ODAV simply does not "want" to extend the airport boundary to include the land that is now and has long been foreseen for airport-related development in the airport boundary. Such a justification if true, would obviously be contrary to ODAV's mission and responsibility to enable the Aurora Airport to grow with aviation-related uses.

We are frankly perplexed by these problems given the success of the airport and the commands of ORS 836.640-642. ODAV should be eager to develop a master plan that ensures the Aurora Airport's continued growth and success over the master plan's 20-year horizon. If these problems that risk sending the airport backwards by decades arise from a lack of meaningful airport stakeholder engagement in the development of the preferred alternative, then ODAV should meaningfully engage. But whatever the reason, we strongly encourage ODAV to dismiss the Preferred Alternative and to meet with the airport stakeholders and to explore a more normative and economically reasonable preferred alternative that is consistent with ORS 836.640-642.

Sincerely,

Kevin Ferrasci O'Malley, CEO
Wilsonville Chamber of Commerce

Greetings,

I am writing to express my strong objection to the provisions of the East Side Property Acquisition outlined in the new Aurora Airport Master Plan.

This “strategy” is ill-advised, burdensome, over-reaching and totally unnecessary, not to mention a HUGE waste of taxpayers’ money. The condemnation of private property in this plan is unconscionable. Aviation safety is paramount, but this plan goes WAY TOO FAR.

ODA continually states it has a low budget, and now it wants to “dig deep” into taxpayers’ pockets to fund a project for which there is no present need.

I ask you to reconsider ODA’s position on this financially debilitating project.

Sincerely,
Jeff Oerding
Columbia Aviation Association Historian
Aurora Airport stakeholder since 1979

Hello Alex and Tony,

I am writing to follow-up again on your promise from our May 29 meeting to provide timely the City with the requested air traffic data prior to the July 30 PAC work session.

I have now filed a formal Public records request via the ODAV website requesting the operations data being used by the Master Plan process.

Please advise on what is going on. Thank you.

Hello Thomas,

Thanks for your note, and we would be interested in pursuing both options that you suggest:

1. We prefer to have the data prior to the July work session in order to conduct analysis so that we can be better informed for the July PAC work session. Please advise on how we may timely acquire such operations data.

2. We would appreciate the opportunity to continue our group check-in following the July work session. Please provide a few good dates and timeframe that work for ODAV leadership; given the August 'vacation season' we may need to look at a range of potential dates in August and September.

Thank you.

Hello Mark,

Good afternoon and thank you for bringing this forward. For the benefit of interested parties, the topic of forecast data for the Aurora state airport will be discussed in detail and addressed during our July PAC work session. ODAV can share data that is currently available as requested but anticipate ODAV and the FAA will be able to provide clarification on the data used during the July meeting. Please let Tony and/or I know if you would prefer to have the data prior, or if we can continue our group check-in following the July session.

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

Good day Alex and Tony,

I am writing to follow-up on the operations forecast data item that you note in your email and that was raised during our meeting last week.

The Draft MP states, p 3-24:

> During several rounds of coordinated review of Working Paper No. 1 with FAA, the Consultant revised the aircraft
> operations forecast models to respond to specific FAA comments. The extended FAA review process resulted in
> four aircraft operations models for final consideration. Two of the models (National Aerospace Forecast and FAA
> TAF Federal Contract Tower - Oregon) are maintained unchanged from the original preliminary forecasts; two
> models (TFMSC and Marion County Population) were significantly revised; and one model (Aurora Historical ATCT
> Trend) was discarded.

The Draft MP acknowledges on p 3-24 that "Normally at a towered airport such as Aurora State Airport, a trend analysis of historical ATCT local operations would provide a reasonable indication of future growth potential." The Draft MP then provides debatable reasons why the Aurora Historical ATCT Trend was discarded (pp 3-24-25):

> 1. Limited Data Range. The limited number of years of ATCT operations (2016-forward) provides a reliable indication of individual year historical activity but does not provide a sufficient span of time needed to define
> reliable trends to build future activity projections. This is highlighted within the overall ATCT data, where local
> operations have experienced several significant upward and downward fluctuations during this period.
>
> 2. COVID-19. The FAA recognizes that the COVID-19 pandemic and the ongoing post-COVID recovery have created significant forecast uncertainty throughout the U.S. civil aviation system that reduces the level of confidence normally associated with airport master plan forecasting. The impacts of COVID-19 on activity at
> Aurora State Airport are reflected in the ATCT historical operations counts noted above, and they contribute to
> annual data that fails to define a reliable trend that can be used to project future aircraft flight activity.

The City respectfully disagrees with both of these reasons as valid reasons to reject the Aurora Historical ATCT Trend. As noted in the Draft MP, the "ATCT at Aurora State Airport has been in service daily since October 2015." P 2-10. This means that nearly 9 years of actual operations data is available.

The City seeks to analyze the operations data to better understand how ODAV's preferred Operations Forecast—the "Marion and Clackamas County Combined Population Growth Model is the recommended aircraft operations forecast for the 2021-2041 Aurora State Master Plan." (p 3-26)

The City understands that ODAV has access to FAA Traffic Flow Management System (TFMS) data for the Airport, p 2-11:

> Instrument Aircraft Flight Activity
> FAA Traffic Flow Management System (TFMS) records were obtained through a Freedom of Information Act (FOIA)
> request. These records provide Instrument Flight Rules (IFR) flight plan arrivals and departures for all airports
> nationwide and include information on each aircraft, departure and arrival airports, and departure and arrival dates
> and times, among other data. Nearly 10 years of Aurora State Airport records were available for analysis—January 1,
> 2012 through August 16, 2021. Consultants have requested the remaining 2021 data through the FOIA process and
> will incorporate the data when available to complete the 2021 counts.

The City is not aware of this flight data being published for public inspection. The City seeks to advance the public interest by reviewing public data that supports ODAV's Operations Forecast. Additionally, it is now 2024, and several years of additional ACTC flight data are now available; however, ODAV appears to only be examining a shorter time period when the ACTC was operational, from October 2015 to August 2021.

Please advise how the City may obtain the digital flight data for VRF and IFR operations that ODAV is using upon which to base a decision rejecting the Aurora Historical ATCT Trend model. I understand that the technical request may be for a digital file or files providing National Offload Program (NOP) recorded traffic data representing all flights within 10 nautical miles of KUAO (LAT N45.25 degrees, LONG W122.77 degrees) at or below 4,000 feet MSL, occurring between October 1, 2015, and September 30, 2021.

Thank you for your time and consideration.

Hello Mark,

Good morning and thank you for reaching out to follow up. We greatly appreciate the opportunity to meet with leaders from Wilsonville and Aurora and all the time and effort you invested to make it happen! As discussed during the meeting, we are looking forward to continuing the conversation and open to scheduling our next discussion. We can schedule around our master plan progress and/or setup a quarterly 'check-in', just let us know what works best for the group.

Tony is on the road this week visiting south/east state airports and our board meeting in Pendleton on Thursday. We will review the operations data e-mail upon receipt. As always, feel free to give me a call at 971-375-2357 as needed.

Hello Tony,

Officials of Aurora and Wilsonville greatly appreciate the opportunity to engage in dialogue and discussion over a number of important, substantive issues pertaining to airport master planning, land-use and related matters.

I will follow-up with a second email regarding the matter that we discussed about the City obtaining the raw data of actual Airport operations that ODAV used to determine that actual Airport operations data was of no value in developing the Operations Forecast, and rather embarked on using a novel methodology of general population growth of two counties as being equal to Airport operations growth.

Also, we hope that Director Sugahara gets well sooner!

Thank you.

Subject: RE: Wed 5/29 Aurora-Wilsonville-ODAV meeting

Hi Mark,

I wanted to follow up on our meeting earlier today and say thank you to everyone from the Cities of Aurora and Wilsonville for the feedback, questions, and discussion.

Please see the attached email which is my latest correspondence regarding the HDSE drainfield. I am happy this could help clarify the status of this lease beyond the current August 2024 expiration. Again, we are evaluating the drainfield in the masterplan as recommended by the FAA. Please forward this to everyone else who was in attendance as well.

I look forward to meeting again soon so we can keep the conversation going on potential improvements for staging firefighting equipment, noise, and other community/airport issues. I have reached out to our team about the raw data used for the forecast, and I'll share when I have more information.

Thanks again,

Tony Beach

Hello Thomas, Tony and Kenji,

Sorry to hear about Director Sugahara's accident.

I've heard from a few of our attendees, and all are in favor of going forward with our meeting tomorrow.

I will note that it took quite a while to find a date that could work for all of us, and so cities' officials appear willing to go forward.

So, let's plan to meet at 10 am at Wilsonville City Hall and see about having a productive conversation.

Thank you.

- Mark

Hello Mark,

Good afternoon. I hope you had a great extended weekend relaxing or enjoying some sunshine! Director Kenji unfortunately had an accident/injury over the holiday weekend that has limited physical activity until recovered.

Tony and I are still happy to meet with you and the Wilsonville team tomorrow at 10:00 as scheduled, but we are also open to reschedule into June/July if Director Kenji attendance is preferred.

Please advise on preferences.

Aurora Airport - PAC #8 question

From Brandy Steffen <brandy.steffen@jla.us.com>
Date Mon 12/9/2024 9:57 AM
To Mark Ottenad <ottenad@ci.wilsonville.or.us>
Cc BEACH Anthony <Anthony.BEACH@odav.oregon.gov>; THOMAS Alex R <Alex.R.THOMAS@odav.oregon.gov>

Hi Mark,

Thanks for your comments and questions. I hope the following answers your questions, but please let us know if you need anything else.

The meeting flyer (public invitation), agenda, and ODAV's email to the general public interested in the project included the direct "public" Zoom link to make it easy for the public to participate.

Regarding the PAC member email that included a link to the website, not the direct "public" link:

1. We want PAC members to be able to direct others to the right page on the website, regardless of the meeting. The most current information and meeting link are always at the top of the page, along with any other meeting materials (if applicable); this has been consistent throughout the life of the project.
2. We previously had some confusion by PAC members about which Zoom link to use. Each PAC member receives a unique link directly from Zoom that is associated with their name and affiliation; that is what we want them to use so that all PAC members are appropriately identified for our meeting notes.
3. In the first email to the PAC, I attached the agenda and reminded them that it was posted on the website. I didn't attach the agenda in the follow up emails, since it had already been delivered.

Thanks,

Subject: RE: Aurora Airport - PAC meeting next Tuesday

Hello Alex and Brandy,

Can you please explain why the following direction is given to members of the public to attend the Dec 10 PAC meeting?

> "• Others can join using the link on the website: https://publicproject.net/AuroraAirport (on the "meetings" page)"

What is the purpose of sending the public to a website, and then having to find a link called Meetings, and then have to scroll down the page to find the correct meeting link, and then click on that?

Why not just say here's the meeting link: https://us02web.zoom.us/j/85045246628?

The meeting announcement says: "**Materials:** The agenda is posted to the website."

Why not just provide a link to the meeting agenda, which also has the Zoom link: https://publicproject.net/files/UAOAMP/uao-amp-pac8agenda-111924.pdf?e0208a471d?

Thank you.

- Mark

Hello PAC Members,

Just a reminder that PAC Meeting 8 will be next Tuesday. We look forward to seeing you. You should receive the Zoom invitations a few days before the meeting, so please watch for that (and check your junk/spam folder).

Date/Time: Tuesday, December 10, 2024 from 5:00-8:00 p.m.
Location: Zoom

- PAC members have been registered via Zoom and will get an email directly from Zoom with the login information (please check your junk folder). Please do not forward this email to anyone.
- Others can join using the link on the website: https://publicproject.net/AuroraAirport (on the "meetings" page)

Materials: The agenda is posted to the website.

Thanks,

Subject: Aurora Airport - December 10 PAC meeting agenda

Hello PAC members,

We are looking forward to seeing you at the **next meeting (VIRTUAL) on Tuesday, December 10, 2024 from 5:00-8:00 p.m.** The Planning Team and ODAV appreciates your feedback on the preferred alternative that was presented at PAC Meeting 7. Based on the feedback and requests to discuss the Preferred Alternative further, ODAV would like to use PAC Meeting 8 to review the noise analysis and have a roundtable discussion with you all regarding comments on the preferred alternative and any additional input or recommendations that you would like to bring to the meeting.

Thanks again for all of the comments from the last PAC meeting, they are posted along with the responses from the technical team on the website: https://publicproject.net/AuroraAirport (on the "public records" and "meeting" pages).

We are moving our discussion of the ALP and CIP to early 2025 to account for this additional roundtable meeting.

Date/Time: Tuesday, December 10, 2024 from 5:00-8:00 p.m.
Location: Zoom

- PAC members have been registered via Zoom and will get an email directly from Zoom with the login information (please check your junk folder). Please do not forward this email to anyone.
- Others can join using the link on the website: https://publicproject.net/AuroraAirport (on the "meetings" page)

Materials: The agenda is attached and posted to the website.

Thanks,
Brandy

Subject: UAO Hangar Destruction!

You don't often get email from allen@capacitycommercial.com. Learn why this is important

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

Mr. Thomas:

As a pilot that flies off KUAO, please register and record my urgent input for the Aurora Airport Master Plan that is underway not to consider the condemnation and destruction of any aircraft hangars.

To even consider such a move is an embarrassment to the aviation community. I am a long-time member of CAA and fly commercially on weekends. I am also a commercial realtor selling and leasing land and facilities throughout the Portland Region to industrial users, including to companies in communities surrounding UAO. the City of Canby, adjacent to UAO, now has 15 companies involved in aviation. Some already have aircraft based at UAO.

UAO is truly an economic generator for Marion and Clackamas Counties. Columbia Helicopter Inc. alone is responsible for the use of over 3,000 motel rooms/year in Wilsonville and surrounding areas. We need to continue to build an aviation business-friendly environment at UAO that pays jobs and taxes for the good of all. The condemnation and destruction of existing hangars as proposed above is not the way to do it, especially with the shortage of hangar space throughout the Region.

Sincerely,

Allen Patterson

Subject: Fw: Potential for MOS related to runway extensions at UAO

Hi Jeff, thanks again for checking in with us today about concerns with the master plan.

Below is the response we received from the FAA when we asked about the potential for receiving a modification of standard for something like a runway extension, even after showing a path to meeting standards in the current master plan.

Additionally, here is the project website with all of the information related to the master plan, including all of the meetings, meeting summaries, draft chapters, and more. Our first public meeting for this project was in November 2021.

https://publicproject.net/auroraairport#

Please let us know if you have any follow up questions.

Thank you,

Tony Beach

Subject: Potential for MOS related to runway extensions at UAO

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

Facility requirements chapter comments were provided earlier today. A question was asked of me when the Facility Requirements chapter was provided for review and I wanted to make sure it was answered concurrently with my review comments of the chapter.

The question was related to the likelihood of the FAA issuing a MOS for existing non standard conditions or allowing future projects to be constructed with MOS.

The question was asked to both Regional level management and ADO level management. The answer provided was consistent. The Region and ADO would not be in support of issuing MOS related to the extension of the runway. Standards would have to be met for ROFA and RSA requirements.

Please let me know if you need any additional information on this topic. We are aware this will have a significant impact on your next chapter, alternatives.

Dear ODAV,
I would like to register my strong objection to any proposal at KUAO to remove any hangars. This state has a shortage of aircraft hangars, which is apparent to me through being an FBO at a nearby airport (7S5) which has also experienced a complete paralysis at ODAV for the building of more hangar space. Whatever the role of some “access road”, its utility cannot remotely compensate for the loss of hangar space and interruption of businesses and livelihoods.
The fact that ODAV would even consider such a plan is alarming. This department needs to return to an attitude of fostering General Aviation, not crippling it.

HOLY CRAP! You are condemning private property to the west, moving Hubbard Hiway, constructing an all new runway / taxiway 80 ft west, tearing down 237,000 SF of existing hangar space;

All for the purpose of adding a vehicle service road!!!???!!!

That’s the most insane idea and WASTE of millions of taxpayer dollars!!! Not to mention all the commercial businesses you’ll shutdown until your replacement hangar project is completed.
Not only no, but HELL NO!!!

Alex, I wish to submit my thoughts on the recently published master plan for the future of the Aurora airport. I have seen that a number of the options include acquisition and tear down of a number of existing hangars, several of which are host to active businesses.

I strongly suggest that refined alternative 1B is the preferred course of action. As both an engineer, and pilot, I can see the challenges that will be present in shifting the runway as called for by this plan. However, demolishing hangars that house active businesses would cause long term harm to the airport many years beyond completion of construction as those businesses would be seriously disrupted. Acquisition and tear down of the hangars host to those businesses may harm trust in airport management and as a result they may take operations elsewhere.

Aurora State Airport Master Plan Website Comments

Name	Kristin Roche
Comments or questions?	For too long Charlotte Lehan, Tim Knapp, Greg Leo and the current Wilsonville City Council have stood in the way of much needed progress of bringing the airport up to date. In fact I would argue the City makes a big show of fighting the airport expansion to secure NIMBY (not-in-my-backyard) votes to distract from the major issues it is dealing with. These include major traffic, congestion and parking issues that have been eroding public support for current council urban renewal projects like gutting Town Center with thousands of people. It is long passed time that the airport be upgraded and expanded. I would like to receive email updates.

RE: Comments on July 30, 2024 Aurora Master Plan Alternatives

Ladies and Gentlemen,

This letter is written on behalf of the direct airport stakeholders whose aviation related businesses are located at, and rely upon, the Aurora Airport. Please include this letter in the record of the 2023-2024 Aurora Airport Master Plan proceedings.

On July 30, 2024, the Oregon Department of Aviation (ODAV) presented three alternatives for the development of the Aurora Airport for the next 20 years and invited comment on those alternatives. **The direct airport stakeholders strongly OBJECT to all of those proposed alternatives: 1A, 1B and 2.**

Objection to Process

At the July 30, 2024 meeting, PAC members were invited to comment on the proposed alternatives via checking a box on an online form to identify which of ODAV's three alternatives they preferred. Participants had no way to offer meaningful comments or explain why none of the alternatives were acceptable. The undersigned strongly objects to ODAV's process as it is not reasonably calculated to solicit input from stakeholders as required by federal law to determine a

preferred alternative. Reserving that objection, the Aurora Airport direct airport stakeholders present the following comments on the July 30, 2024 ODAV proposed master plan alternatives.

General Objection – the Alternatives Present a False Choice: Sacrifice the Safety of the Aurora Airport in the Name of Safety

Under ODAV's "alternatives" the runway extension that is well-documented to be badly needed now for safety, is held hostage to prerequisites that will take a decade or more (if they can even happen at all) and hundreds of millions of dollars that no one has. In other words, ODAV's alternatives ensure that the runway safety improvement will never happen or will happen only if the airport is less safe, all in service of perfect prerequisite compliance with design standards. This is a false choice and one that FAA does not and in fact cannot demand and ODAV should not demand this false choice either. The false choice is not only contrary to the very purposes of aviation master planning and federal law but also ORS 836.600-642 and ODAV's mission.

Alternatives Proceed from False Assumptions

For the alternatives to have legitimacy, they must proceed from accurate assumptions. The proposed alternatives do not proceed from accurate assumptions. To the contrary, each of the three proposed alternatives proceed from false premises.

The first false assumption is that FAA will not allow the airport to "maintai[n] current non-standard conditions" and if the airport has any "non-standard conditions," then FAA will place the runway "in maintenance only mode ***."[1]

[1] ODAV July 30, 2024 PPT Presentation to Planning Advisory Committee. This erroneous assumption carries forward to the August 1, 2024 "Refined Preliminary Alternatives Analysis" which similarly begins by asserting that ODAV has "recognized that maintaining current non-standard conditions is not acceptable to the Federal Aviation Administration (FAA)." There is no such lawful FAA position that ODAV may "recognize." To the extent that ODAV has adopted such a "recognition" it is contrary to both federal and state law and may not serve as the foundation for the airport's 20-year future.

The second false ODAV assumption is that it is necessary for ODAV to acquire the privately owned "through the fence" properties adjacent to the airport "to ensure [their] continued long-term aeronautical use."

Starting with the second false assumption, we note that there is nothing to support the assumption that if ODAV owned the undersigned's private aviation related properties they would be bettered assured to remain in aeronautical use. Respectfully, there are a lot of reasons to believe ODAV ownership of our property would have a contrary result. It is we, the private through the fence owners, who have the strong incentive to maintain robust aviation use of our adjacent private property because it is suitable for no economic use other than aeronautical use and we have invested and continue to invest ***millions of dollars*** to assure the success of our aviation related uses there.

Conversely, we have not seen evidence that ODAV is committed to growing and supporting aeronautical use of our properties at the Aurora Airport. We have pushed for more than a decade for ODAV to remove trees that are a hazard to aviation. ODAV hasn't gotten around to doing that. We have pushed for decades for ODAV to extend the airport's runway for safety, but ODAV hasn't gotten around to doing that, despite the runway extension being approved on the 2012 airport ALP. ODAV told the airport's opponent's that the 2012 airport master plan had not been finally adopted when ODAV had clearly adopted it (otherwise there would have been no 2012 ALP), inviting years of litigation that resulted in a remand of the 2012 master plan on land use grounds. ODAV did not bother to respond to that remand of the 2012 master plan, as it should have.

In all respectfully, the only evidence is that the private through the fence owners have the great documented interest in the continued aeronautical use of their property – they (we) have invested millions of dollars to support aviation use at the Aurora Airport and we continue to do so, our properties are useful for nothing but aviation related use in fact. There is simply nothing to support ODAV's "assumption" that ODAV needs to buy our property to ensure its continued aeronautical

use. We note that this second premise is also contrary to the legislative command in ORS 836.640-642 that ODAV **support** the private through the fence ownerships and their economic development, not buy them out. ODAV is constrained by this legislative command. The second "assumption" is simply a nonstarter.

With respect to the first erroneous assumption, the assumption's referenced "non-standard conditions" are primarily the Runway Object Free Area (ROFA) required separation for C-II design aircraft between the runway and Highway 551. [2] The law does not support ODAV's first erroneous premise that FAA always requires that airports meet all design standards. The law and FAA's decades of practice is exactly the opposite.

In this regard, federal law expressly provides FAA with authority to issue modifications to standards "when necessary to meet local conditions" so long as the "modification will provide an acceptable level of safety, economy, durability and workmanship." 14 CFR 152.11(b). FAA staff lacks authority to override that federal law that recognizes that "non-standard conditions" happen and can be allowed to continue in the right circumstances, as presented here.

The truth is that FAA routinely approves modifications to standards where the modification provides the requisite "acceptable level of safety." FAA has approved modifications at airports from Renton where 737's takeoff and land daily at a B-II airport, to SJC which has modifications to standards for many FAA requirements. This happens frequently enough that, as required by Congress, FAA in conjunction with the National Transportation Research Board and

---

[2] ODAV's "alternatives" assume another "non-standard" condition regarding the location of the airport's septic drainfields in the north and south. The septic drainfield in the south was expressly approved by ODAV, FAA and Marion County in a land use process. It is not "non-standard" or if it is, it is already approved – by ODAV and FAA. Moreover, if necessary, those drainfields can be brought to whatever standard applies. But ODAV may not merely assume they are "non-standard", say they will be "removed" in all alternatives but have no other location for them and no analysis of whether it is feasible to establish any alternative location for them. If ODAV's unstated plan is just to annex the airport to the 900-population City of Auora that has done nothing but oppose the airport for the past decade, and that had a mayor who we understand to be on record saying the city wanted to annex the airport to shut it down, the private airport stakeholders strongly oppose any such -as yet – unarticulated plan.

National Academies of Sciences, published a technical handbook entitled "**Risk Assessment Method to Support Modification of Airfield Separation Standards"** that goes to a lot of trouble to explain exactly how to assess whether a modification to an airport design standard will provide an acceptable level of safety. Contrary to the July 30 ODAV "assumptions" and August 1 ODAV "recognition", this federal risk assessment publication states that "**FAA does accept requests from airports for modifications to standards**."

Following federal law and the FAA Risk Assessment publication, respected airport planner, Aron Faegre prepared such an analysis under the FAA published risk-assessment methodology that **concludes maintaining the existing ROFA between the runway and Highway 551 provides an acceptable level of safety.** In other words, were ODAV to merely ask (and Mr. Faegre has done the work to support that ask), a modification to the ROFA would be granted. Which means contrary to ODAV's "assumptions" underpinning the three alternatives ODAV revealed on July 30, 2024, FAA would approve maintaining the existing non-standard conditions at the airport. This should not be a surprise because FAA approved the exact ROFA modification for a C-II design aircraft that Mr. Faegre demonstrates meets modification standards, when it approved the 2012 ALP for the airport.

FAA Approved the Modification for the ROFA - Separation of the Runway to Highway 551 – in the 2012 ALP under Airport Design Standards for a C-II Airport

The approved ALP that currently governs the airport shows that FAA approved the runway extension to the south with a ROFA modification to standards for the C-II design aircraft for the separation between the runway and Highway 551.

That means there is no reason to think that the same ROFA modification to standards cannot be approved here. ODAV should apply for it and FAA almost certainly will grant it.

Proper Assumptions for this Master Planning Effort

With all due respect, there are proper assumptions for this master planning effort. The direct airport stakeholders urge ODAV to adopt the following assumptions and goals for the Aurora Airport Master Plan:

- ODAV can and should apply for modifications to C-II design standards for existing conditions at the airport that would otherwise require unachievable prerequisites to the runway extension.
- ODAV should grow and support the through the fence aviation operations as it is instructed to do in ORS 836.640-642. Accordingly, ODAV should expand the airport boundary to enable the last undeveloped through the fence areas shown on the draft master plan to grow and flourish.
- ODAV has an obligation to manage the Aurora Airport to safely support the general aviation that has grown to rely upon it and the Oregonians who rely upon that general aviation.
- ODAV should support the Aurora Airport as an economic powerhouse for the region being responsible for thousands of jobs and millions of dollars in payroll and visitor spending.
- ODAV should support the Aurora Airport that is known to be a resiliency center in the event of natural disasters – whether they be wildfire disasters or the Cascadia Subduction Event.
- ODAV should support the Aurora Airport that is home to Life Flight that provides important air ambulance service to needy Oregonians and delivers organs for transplant that saves lives.
- To the extent ODAV is privately planning otherwise, ODAV should strongly resist efforts by opponent municipalities like the city of Aurora to annex the airport.
- The airport should not be casually discarded to the bin of unachievable prerequisites.

Alternative that ODAV Should Consider

A wholly achievable alternative that is consistent with FAA and state law that ODAV should consider is:

a. a 500' runway extension to the north; better yet a 750' runway extension to the north. 750' is well-understood to be better and more appropriate for the long master planning horizon.
b. Reapproval for the necessary existing modification to standards for existing conditions.
c. Adjust the airport boundary to include the undeveloped through the fence areas on the current draft,
d. Show the Internal Circulation Road location that was shown on the 2012 ALP.

Conclusion

The direct airport stakeholders stand ready to work cooperatively with ODAV toward an appropriate 20-year master plan for the Aurora Airport along the lines of the alternative that we outline above. However, respectfully, we cannot abide any of the July 30, 2024 proposed alternatives and strongly oppose all of them. We hope that ODAV will agree that the assumptions and alternative proposed by the direct airport stakeholders are appropriate ones that ODAV should adopt in support of general aviation at the airport, regional disaster resilience and economic vitality for the decades to come. The future of aviation at the Aurora Airport depends upon it.

Thank you for your consideration.

Sincerely,

Jeffrey Schreiber

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

Dear Alex Thomas and Tony Beach,
For the past 20 years, I have been flying and operating our business Pacific Aircraft Services at Aurora State Airport (KUAO). I strongly oppose the proposed condemnation and destruction of aircraft hangars in the Aurora Airport Master Plan.

Our business performs flights, maintenance and management for nine private Citation jets and King Airs. We play a vital role in supporting many local businesses, contractors, pilots and employees and contribute to the overall infrastructure of the airport. Removing the front row hangars would have significant negative impact on businesses whose aircraft operate in and out of Aurora Airport. The removal of the hangars would essentially drive away these businesses, to the detriment of KUAO and the local community.

Please consider this input and strong opposition to hangar removal as you work thru the planning process and register my urgent request to preserve these critical assets at KUAO.

Thank you.

Subject: Master Plan for Aurora State Airport

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

Hello Tony and Alex,

We have operated our business at Aurora Airport since 2006 and now have 15 employee, contract pilots and workers, along with numerous aviation vendors who rely on our business. We have seen the town of Aurora improve and benefit economically from the airport community.

While we recommend airport safety improvements, we do not see the destruction of hangars and the businesses that operate at Aurora Airport as being the best option. The idea of having businesses completely unended for many months, and ultimately being forced to pay OR State to lease land is probably going to drive business away, making the future of Aurora Airport questionable.

Regarding the two objectives for the proposed destruction:
1. Vehicle lane: this would be more efficient and safer if placed to the East where most vehicles enter the airport, as far as possible from the taxiway.
2. Parallel taxi-lane: this seems unnecessary, I do not believe there is a compliance issue necessitating it. But it could be achieved with ODAV purchasing 1 acre at mid-field and the seller is willing. This was originally setup long ago for ODAV to purchase at a future date.

Please register and make part of the master plan record my very strong objection to the forced acquistion and destruction of any privately owned hangars and land at the Aurora Airport.

Hello Anne,

Thank you for letting us know about the change. We will update our records. Please note that we have a virtual PAC meeting on Tuesday, June 11 from 5:00-8:00 pm. We hope that Dave can attend.

We are also hosting an in-person open house for anyone interested in the project on Thursday, June 13. We hope that you can help share the public open house with the rest of Charbonneau residents and that you can attend. I've attached a postcard that announces both events; feel free to share! The information is also listed below.

Thursday, June 13, 2024

Drop by between 4:00-7:00 pm

North Marion High School, Commons

(20167 Grim Rd NE, Aurora, OR 97002)

Light refreshments provided; children welcome

Tendremos interpretación en español en la reunión. We will have Spanish interpretation at the meeting.

This meeting provided an opportunity for the neighbors, PAC members, and other interested community members to learn about the Airport Master Plan project. This meeting will present the preliminary alternatives for the Aurora State Airport Master Plan. All written and verbal comments collected during the open house will be included in the event Summary.

Please let me know if you have any questions.

Thanks,

Regarding the Aurora Airport Master Plan Process.

I am requesting that you **make part of the record** that I have an absolute objection to the confiscation and destruction of hangers on the Aurora Airport. This is an unnecessary move and goes against the needs of the community.

Destroying private, functioning property, to build a parallel taxiway and roadway - that can be accommodated in other, more appropriate, and logical ways – needs to be selected as the solution. Example: build the roadway at the edge of airport property. And ask the willing party to sell the acre of land that is available and would support a more supportive option.

At some point our government officials need to use their knowledge and power to support business in Oregon and organizations that are functioning and profitable and contribute to society – not look for ways to destroy of dismantle them. When all the businesses have been decimated, who will pay the corporate and business taxes that the state lusts after?

I recommend airport safety improvements but only with no destruction of any hangars.

Sincerely,

Peter Stack

Subject: RE: Aurora PAC membership

Brandy –

Thank you for reaching out about the PAC. Our team has talked internally. I will serve as the main PAC member, Don Hardy will serve as the alternate. Eileen Stein would like to stay on your email list so that she can stay on top of the issues that arise, though she does not intend to serve as a PAC member.

As Don Hardy and I were talking about the Aurora PAC, one item came up that we thought would be important to share. In the case that either Don Hardy or myself are unable to attend a PAC meeting, it is possible we will send a different staff person to the meeting to be able to ensure someone from our organization is present and to take notes to bring back to the City of Canby. We believe it is unlikely this will happen, however we thought it would be important to note in the case it does.

Thank you for checking in with the City of Canby – we appreciate it!

Sincerely,

Hi Eileen and Jamie,

We're just updating our documentation for the project. Is Eileen the main PAC member and Jamie the alternate? Jamie submitted comments during the July comment period.

If that is right, we'll send you both the information for the 10/15 meeting.

Thanks,

Re: Aurora State Airport Master Plan Proposed Preferred Alternative

Mr. Thomas,

Please enter this letter into the record for the Oregon Department of Aviation's (ODAV) proposed "Preferred Alternative" for the Aurora State Airport Master Plan. We support Director Sugahara's statement that ODAV is willing to modify its Preferred Alternative for the Aurora Airport Master Plan. We believe that it is important that ODAV do so, to enable the airport to continue to deliver significant tax benefits, family wage jobs, emergency resiliency and aeronautical innovation to the region and state. The current version of ODAV's proposed Preferred Alternative is inconsistent with these objectives.

ODAV is bound by ORS 836.640-642 which was developed by Business Oregon. That statute strongly encourages private investment at the Aurora Airport and commands ODAV to carry out that objective. Contrary to that statute, ODAV's proposed alternative contemplates ODAV taking by eminent domain the Aurora Airport front line aircraft hangars for which the owners have invested more than $200 million, created millions in tax revenue, more than a 1000 good jobs and millions in directly and indirectly related tourist revenue for surrounding communities, with ORS 836.640-642 as the catalyst.

Against this backdrop, the "Preferred Alternative" anomalously designates areas that have been set aside in airport master plans for airport related development since 1976, as areas for ODAV acquisition instead of bringing them into the airport boundary established by ORS 836.640-642 for development for airport related uses and wipes out the front line hangars.

Both elements of the preferred alternative are misguided. Among other objectives for the Aurora Airport, ORS 836.642 requires ODAV to "Preserve investments [at the Aurora Airport] and the level of service provided by [the Aurora Airport]" and to "promote economic development" at Aurora "by creating family wage jobs, increasing local tax bases" through support of private aviation-related uses so that they may "develop and thrive." The preferred alternative is contrary to ORS 836.640-642 and expressly seeks to trade the private investment that the statute seeks to encourage and grow, for government condemnation and ownership.

Concerningly, ODAV's preferred alternative significantly gambles with the significant economic benefits that private investment at the airport has delivered, risking their continuation. The threat of ODAV condemnation, not to mention ODAV actually engaging in such litigation against those owners, presents an unacceptable risk of driving away not only those aircraft hangar owners, but also their businesses, jobs and related tax and tourist revenue. Once they are gone, the stigma of such ODAV action could make the airport and indeed any airport that ODAV manages, a private investment pariah for decades. Such a risk should not be taken where, as here, a state statute commands ODAV otherwise and there are alternatives.

It is respectfully submitted that the justification for the "preferred alternative" simply does not justify its deleterious effects. ODAV is on record stating that these harmful consequences only flow from ODAV's desire for a "vehicle service road" (VSR) and a new aircraft taxiway. But neither necessitates the preferred alternative.

Regarding the VSR, the 2012 master plan approved a VSR that has none of the Preferred Alternative's deleterious effects and does not carry a $200 million condemnation price tag. At worst, the 2012 VSR costs the state some pavement. Moreover, we are advised that the private aeronautical stakeholder owners have offered ODAV the land needed for the 2012 MP VSR free of charge. We are unaware of any reason for ODAV to not pursue that 2012 MP VSR and we can only see good reasons to do so.

We are further advised that there are alternatives for a new taxiway that ODAV has not explored. We understand that ODAV has not explored any such alternatives because it does not own the land needed for a taxiway to be located elsewhere. However, so far as we know this has never been an impediment previously to the development of the Aurora Airport and should not be an impediment now. Many features of the proposed alternative are now contemplated on land that ODAV does not own – including the taking of the frontline hangars. Even if ODAV had to acquire some private land for a new taxiway, ODAV should explore such alternatives having the least adverse impact on the continuation and growth of private aeronautical investment at the airport, not to mention a price tag well south of the $200 million under the Preferred Alternative. Finally, we are advised that ODAV simply does not "want" to extend the airport boundary to include the land that is now and has long been foreseen for airport-related development in the airport boundary. Such a justification if true, would obviously be contrary to ODAV's mission and responsibility to enable the Aurora Airport to grow with aviation-related uses.

We are frankly perplexed by these problems given the success of the airport and the commands of ORS 836.640-642. ODAV should be eager to develop a master plan that ensures the Aurora Airport's continued growth and success over the master plan's 20-year horizon. If these problems that risk sending the airport backwards by decades arise from a lack of meaningful airport stakeholder engagement in the development of the preferred alternative, then ODAV should meaningfully engage. But whatever the reason, we strongly encourage ODAV to dismiss the Preferred Alternative and to meet with the airport stakeholders and to explore a more normative and economically reasonable preferred alternative that is consistent with ORS 836.640-642.

Sincerely,

Jamie Stickel

Aurora State Airport Master Plan Website Comments

Name	John Storey
Comments or questions?	I SUPPORT AURORA'S AIRPORT AND GENERAL AVIATION Aviation has become an indispensable component of the world's transportation infrastructure. However like the history of the automobile, growing from an affluent person's luxury to an every person transportation necessity, aviation needs the foundation to grow and continue to fill greater roles in the world's social and economic structure. Current benefits of an airport like Aurora: Jobs: Many people work at the airport maintaining the many aspects of aviation.

	Taxes: The employees, businesses and pilots using the airport pay various governmental fees and taxes. Professional pilot training: Many pilots that will someday fly the airline's airplanes are training at the airport. Disaster preparedness: In the event of a major transportation-impacting disaster, the airport would be a center for transportation support. Emergency services support: Many of the aircraft used in emergency operations use the airport for maintenance, training and storage. Volunteer activities: Many non-professional pilots contribute daily to charitable organizations supporting disaster preparedness, specialized medical transportation and other socially conscious efforts. Critiques to opposition: Noise: Pilots have special procedures to avoid noise pollution for nearby residents. Additionally without smaller airport like Aurora's, businesses that might advance less-noisy aircraft would not have a location to progress their technologies. Climate impacting pollution: Scientific conclusions indicate that general and business aviation are statistically insignificant compared to automobile transportation. Again technological advancements in cleaner (greener) aviation cannot progress without smaller, supporting airports. Traffic congestion on I-5: Come on!! Really?! When driving on I-5, I see selfish and distracted drivers and sheer vehicular volume being the greatest contributors. Besides with futuristic, affordable, accessible transportation network (evolving from local airports like Aurora's) traffic congestion will only get worse. We cannot continue to build more highways to support the growth of ground-based, personal transportation. We must begin to expand vertically, which would need supporting smaller airports for innovation and growth.

Please note my ***very strong objection*** to the current master plan for the Aurora Airport.

The current plan is very excessive for the modest needs of the airport. Confiscating property and destroying facilities will negatively impact business -- potentially reducing airport employment and exacerbating the ongoing hangar shortage problem.

Instead of this overreaching master plan:

1. The taxiway could be much more accommodating with some intermittent passing zones, which can be acquired through negotiations with property owners.

2. Again through voluntary negotiations with current property owners, end-to-end, vehicle roads could be achieved through properties closer to Airport Rd.

I want safer airport operations, but not through grossly excessive means.

Thank you,
John Storey

Gentlemen,

Please register and make part of the Aurora Airport master plan record my objection to the "taking" of any privately owned hangars on the Aurora Airport. This looks as if it is a solution looking for a problem. The FAA can and will issue waivers for the issues at hand.

There is a significant shortage of hangars. The hangars sited for destruction are all currently providing significant employment. The two motivations for the proposed destruction, 1) a vehicle lane would work MUCH better as far as possible away from the taxiway 2) The parallel taxi-lane is unnecessary, and very similar results could be achieved with ODAV purchasing only 1 acre from a willing seller or as mentioned above, an FAA waiver.

I recommend airport safety improvements but only with no destruction of any hangars.

Respectfully submitted,

Stan Swan
CFII

I recently became aware of what the state is offering as the new master plan for the Aurora airport.
It seems highly impractical and extremely disrupting to demolish so many buildings to accomplish what you are proposing. There is a significant shortage of hangar space now and will be worse in the future. There is also many jobs in the buildings that would be lost, at least for a long time, until new buildings can be developed.It seems that locating the vehicle road further east, near Airport Way makes more sense. And I don't think that a parallel taxiway is worth the cost and disruption it would cause.
I recommend that the new plan NOT include destruction of buildings.

Mr. Thomas;
I have been involved in flying activities at the Aurora Airport for many years, having flown my first solo flight there in 1967.
I am deeply disappointed that the master plan that you are considering will demolish many hangers and disrupt many businesses. I ask that the board come up with a plan that does not put the hangars in jeopardy.
Walt Swan

Subject: UAO Master Plan PAC & Meeting

Hello Betsy Johnson,

Thank you for contacting the Oregon Department of Aviation. Our team has been extremely busy with the legislative session and the Aurora PAC process, and we appreciate your patience.

This message is to acknowledge your recent phone calls and assure you that we will be in touch soon. To maintain transparency and avoid any appearance of impropriety or undue influence on the PAC process, we are happy to schedule a meeting after we have released a refined alternative for UAO.

ODAV values and welcomes all public input, and we encourage you to attend and provide comment during the public comment section of our next PAC meeting. Additionally, we deeply appreciate the perspectives and contributions from the organizations selected to participate on the PAC. These members represent the airport's direct users, relevant agencies, and the local community, ensuring a broad and informed range of viewpoints are considered.

As outlined on page 3 of the Protocols and Ground Rules (attached), any alternate must be identified to ODA(V) at the project onset and attend all meetings to prevent the need to revisit past business.

Thank you again for reaching out, and we look forward to connecting with you soon.

AURORA STATE AIRPORT MASTER PLAN

PLANNING ADVISORY COMMITTEE PROTOCOLS & GROUND RULES

Below is the proposed approach, including protocols and ground rules, for the Aurora State Airport Master Plan Project's Planning Advisory Committee (PAC).

STRUCTURE

Committee Structure

- The committee includes members appointed by Oregon Department of Aviation (ODAV) staff, in accordance with ODAV's State Agency Coordination Agreement. Members represent a wide array of organizations, including interested cities/counties, various state agencies, potentially affected tribal communities, adjacent property and business owners, developers, residents and community groups.
    - ODAV has tried to get a diverse range of viewpoints involved and represented on the PAC.
    - Additions or refinement of PAC members may take place at the discretion of ODAV staff.
- Members will provide input at key decision points in an advisory level; as a **sounding board**. No recommendations will be made by the committee; the group will be asked for feedback through poll questions and break out room discussions. All viewpoints will be represented in the meeting summaries.
- PAC Members will provide input as a representative of their organization. Personal opinions are not the intent of membership.

Decision-making

- All opinions will be part of the meeting record, attributed to specific committee members in the meeting notes. Recordings of the meetings will be posted on the project website.
- Decision points within the planning process will result in round table discussions and collection of committee member opinions. This will not be a formal recommendation; all opinions will be included in the meeting summary.
- As the airport sponsor, ODAV staff will be the final decision-making authority. They will decide what is included in the Master Plan.
- The Federal Aviation Administration (FAA) reviews all components of a Master Plan as it is prepared to provide input and guidance. However, the FAA only reviews and formally approves these components: Forecasts of aviation activity (based aircraft, operations, and peak activity); Selection of critical aircraft; and Airport Layout Plan (ALP). It is from these listed elements that the FAA makes a determination regarding eligibility of Airport Improvement Program (AIP) funding for any proposed development.

Meeting Process

Before each meeting the agenda and any meeting materials will be emailed (and mailed upon request) to all members. Notice will be posted in the local newspaper, at the Aurora Airport, and on the ODAV website and social media accounts 30 days before the meeting, so that interested individuals can choose to attend. Email notification will be sent via GovDelivery for interested parties that have signed up for the service. The proposed meeting topics and dates are below:

1. AMP introduction – 11/16/21 from 3:00-5:00 pm – Zoom
2. Existing conditions – Zoom
3. Optional meeting – if needed
4. Facility goals and requirements – Zoom
5. MOS/RPZ Analysis – Zoom
6. Preliminary development alternatives – Zoom
7. Optional meeting – if needed
8. Preferred development alternatives – Zoom
9. Implementation plan and CIP – Zoom

Meeting Guidelines

- Discussions will be facilitated and time will be allocated for all committee members to speak.
- Meetings will begin and end on time. If agenda items cannot be completed on time, ODAV staff will decide if the meeting should be extended or if an additional meeting should be scheduled.
- Meetings summaries will be prepared and distributed following the meetings.
    - All committee opinions will be documented in the summary.
    - All public comments, whether collected verbally or written, will be responded to in the summary.
    - A recording of the meeting will be posted to the project website.
- Facilitator will provide opportunities for 15 minutes of public comment or announcements relating to agenda items at the end of each meeting, with a maximum of 2 minutes per individual.
    - PAC members and staff should not answer public questions or respond, to allow the public their full time to provide comments.
    - Every agenda and virtual meeting will advertise the opportunity for comments to be emailed before or following the meeting.
    - Comments on non-agenda items should be provided in writing. Community members are encouraged to provide comments at least three days before meetings to allow members time to review and reflect on comments.

Group Agreements

The facilitator will:

- Ensure that everyone has an opportunity to participate.
- Keep meetings moving and focused on the agenda.
- Start and end meetings on time, unless ODAV agrees to extend the meeting time.

- Enforce group agreements and ground rules.
- Host and facilitate the meetings virtually on Zoom as long as requested by ODAV. Settings for the virtual meeting will:
    - Allow PAC members to have dialogue with ODAV and consultant staff; though everyone will be muted due to the size of the committee until the comment periods. Members will be labeled on Zoom as “panelists”.
    - Public participants can attend the meeting as “guests/participants” and provide comments at the designated time, but not during the rest of the meeting. They can also submit written comments throughout the meeting.

Committee Agreements

As a committee, we agree to approach this work with honesty, openness and willingness to work together. This includes building trust and assuming good intentions in others and ensuring that our behavior supports a successful process. We will work with each other and staff to address issues as they arise, utilize tools to ensure clear communication and robust participation, and meet the communication needs of members.

Specifically, we agree to the following ground rules:

- Be respectful of each other.
    - In discussions, challenge ideas rather than individuals.
    - Approach different opinions with curiosity, seek to understand.
    - Be mindful of your participation and the space you occupy in meetings: step up and step back.
- Keep the needs and concerns of the local community and the larger region at the forefront of the work.
- Keep focus on the objectives of the meetings; work with facilitator to note additional topics for discussion.
- Keep multi-tasking to a minimum
- Members commit to the spirit of transparency and sharing their interactions with the public by referring the public to provide comments at meetings, via email, or at one of the public outreach activities.
- Members are encouraged to share the committee’s progress with their respective constituencies/organizations at meetings, by e-mail or through newsletters.
- Notify ODAV staff of any media inquiries and refer requests for official statements or viewpoints to staff. Committee members will not speak to media on behalf of the committee or ODAV, but rather only on their own behalf.
    - Members will not undermine the work of the group by initiating contact with the media or officials to advance their opinions or to counter fellow members’ opinions.
- Attend all of the meetings; an alternate can attend in the place of a member.
    - The alternate must be identified to ODAV at the project onset and attend all meetings so that past business doesn’t need to be revisited.
    - Notes/comments from a member can also be sent to the facilitator in advance of a meeting if a member cannot attend; these notes will be read to the committee.

Hi, Anthony (CC Bruce Bennett)-
I'm reaching out directly to you with input on the Aurora State Airport (KUAO) Master Plan.

I wholeheartedly support continued aviation operations at the Aurora State Airport.

I am a private pilot who earned my pilot certificate at KUAO thanks to the existence of the airport and Fixed Based Operators (FBO's) like Willamette Aviation and Aurora Aviation at a location that was convenient for me with instruction and aircraft rentals that were affordable to me.

I am an active member of the Columbia Aviation Association, an aviation community of pilots based at KUAO that are united by a passion for aviation. Our mission includes fostering aviation safety, education, mentoring and outreach, and we provide opportunities to expand our members' aviation expertise.

I am proud to own and operate an aircraft that runs on unleaded gasoline ("MOGAS").

I support maintaining the existing runway, taxiways and control tower such that any future plans do not interrupt airport operations.

As a safety professional, I support the promotion of safety improvements for ground and air operations.

I also recommend connecting the south end operations with the midfield operations via a vehicle access behind the old church property as well as connecting the ramp in front of the Columbia Aviation Association's clubhouse directly to the taxiway toward runway 35.

I do NOT support the annexation of KUAO into the City of Aurora. I believe it would increase our taxes and provide no tangible benefit to airport users like me.

Thank you for your consideration of these comments,
Mark

Hi, Anthony-
I'm writing again to share additional input on the most recent version of the Aurora State Airport (KUAO) master plan (Refined Preliminary Alternatives Summary dated 8/21/24) being progressed by the Oregon Department of Aviation.

The current plan involves the removal of hangars closest to the east side of the runway. I am opposed to the demolition of this existing, useful infrastructure. Their existence provides commercial value to the airport and I believe the cost of their removal would outweigh the value they bring to the airport. An alternative to the addition of a full length parallel taxilane and vehicle service road directly east of Taxiway A should be sought to address/provide runway access issues while preserving the existing infrastructure. This approach could satisfy the needs of airport expansion while preserving the existing improvements (hangars) on the airport.

I am a private pilot who earned my pilot certificate at KUAO thanks to the existence of the airport and Fixed Based Operators (FBO's) like Willamette Aviation and Aurora Aviation at a location that was convenient for me with instruction and aircraft rentals that were affordable to me.

I am an active member of the Columbia Aviation Association, an aviation community of pilots based at KUAO that are united by a passion for aviation. Our mission includes fostering aviation safety, education, mentoring and outreach, and we provide opportunities to expand our members' aviation expertise.

I support maintaining the existing runway, taxiways and control tower such that any future plans do not interrupt airport operations. And as a safety professional, I support the promotion of safety improvements for ground and air operations. However, I am compelled to share this viewpoint in support of the rights of the existing property owners on the airport.

Please register and make part of the master plan record my opposition to the eminent domain-like intentions currently planned.

Thank you,

Mark Tipperreiter

Please register and make part of the master plan record my very strong objection to the "taking" of any privately owned hangers on the Aurora airport.

The hangers possibly slated for destruction are imperative for the safe storage of aircraft. These hangers are very valuable to the Oregon flying community.

Alternatives to the hangers destruction:

1. Create a vehicle lane as far away from the taxiway as possible.
2. The parallel taxi-lane is unnecessary. Very similar results could be achieved by ODAV purchasing one acre from a willing seller.

I recommend the airport safety improvements; but only without the destruction of any hangers. Thank you.

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

Please register and make part of the master plan record my very strong objection to the "taking" of any privately owned hangars on the Aurora Airport.

There is a significant shortage of hangars. The hangars sited for destruction are all currently providing significant employment. The two motivations for the proposed destruction, 1) a vehicle lane would work MUCH better as far as possible away from the taxiway 2) The parallel taxi-lane is unnecessary, and very similar results could be achieved with ODAV purchasing only 1 acre from a willing seller.

I recommend airport safety improvements but only with no destruction of any hangars.

Alex Thomas, Planning & Project Manager; Brandon Pike, Aviation Planner

Gentlemen:

I am writing to provide comments regarding your most recent presentation to the Planning Advisory Committee for the Aurora State Airport Master Plan, which was presented to the PAC during the online meeting on July 30, 2024.

As a part of the July 30th presentation, ODAV's consultant Century West Engineering (CWE) explained that, after extensive analysis and consultation with ODAV and the FAA, CWE has determined that the Aurora State Airport currently does not meet applicable FAA design guidelines for a variety of reasons, including unacceptable items in the Runway Object Free Area (Hubbard Highway, Keil Road, ASOS equipment, wind cone), unacceptable items in the Runway Safety Area (south-end drain field, open drainage ditches), unacceptable direct runway access from aprons/hangars, and a runway length that is approximately 500' too short to meet the RDC C-II requirements.

Next, CWE explained that they had developed three "Refined Preliminary Alternatives" (identified as Alternatives 1A, 1B, and 2), each of which presents a potential way that ODAV could conceivably bring the airport into compliance with FAA requirements. Notably, all three of those Refined Preliminary Alternatives include lengthening the runway by 497' to the north (bringing the runway length to 5500'), which apparently could be accomplished on existing ODAV property, with no taking of any private property required at all. I want to point out that, even though this one airport improvement (i.e., a 500' runway extension) would not on its own resolve all of the airport's current deficiencies, nevertheless it would unquestionably make the airport significantly safer for all airport users, and I believe it would be a giant step toward meeting the FAA requirements applicable to this type of airport. Other minor changes to the airport could be made that would address many of the other deficiencies (e.g., moving the windsock and ASOS equipment, replacing open drainage ditches with covered drainpipes, etc.), without requiring significant land acquisitions or negative impacts on properties adjacent to the airport which are now privately owned.

However, as CWE explained during the July 30th presentation, in order to meet all of the FAA's guidelines, either the Hubbard Highway would need to be moved to the west, requiring acquisition and clearing of 39 to 43 acres of private commercial and residential property that is west of the current Hubbard Highway (as detailed in Refined Alternatives 1A and 1B), or the runway would need to be moved to the east, requiring acquisition and clearing of 37 acres of private property that is east of ODAV's current property line and is now in active aeronautical use (as detailed in Refined Alternative 2).

This work by CWE has produced some useful information, and it has been a necessary and helpful part of the Master Plan process – identifying the airport's current deficiencies and exploring the potential implications of various possible ways that the deficiencies, theoretically, could be fixed. Unfortunately, but most importantly, what I believe this work has revealed is that none of the Refined Preliminary Alternatives is even remotely realistic. In fact, I highly doubt that there is anybody at ODAV or CWE who believes that

any of the recently-presented Refined Alternatives will actually be implemented at any time during the Master Plan planning period. All of the presented alternatives are, in my opinion, obvious non-starters, as each of them would require a massive expenditures of public funds, at a level that is extraordinarily unlikely ever to be made available; and regardless which of the alternatives were to be pursued it would be nearly impossible to adequately justify the impacts on adjacent property owners.

While I would very much like to see the Aurora State Airport improved so that it would meet all FAA design guidelines, it is my opinion that this goal realistically cannot (and therefore will not) be achieved within the coming decades. Therefore, it would be very useful for ODAV to direct its consultants to begin exploring ideas for airport improvements that realistically could be accomplished within the Master Plan planning period.

To that end, what I would like to see is CWE developing and presenting to the public some alternatives for projects that would lead to substantial measurable progress in eliminating current non-standard conditions at the airport and that would move the airport meaningfully towards meeting RDC C-II requirements, while also acknowledging that, as a practical matter, it is extremely unlikely that the airport will ever be able to achieve 100% full compliance with FAA design guidelines.

I suggest that ODAV consider what I will call Realistic Alternative No. 3: Leave the runway right where it is now, but extend it 500' to the north. This could be done with or without various other minor changes on the airfield (such as moving the windsock and ASOS equipment and covering drainage ditches) and leaving the Hubbard Highway unchanged (noting that this would still leave the Hubbard Highway within the ROFA, which is undesirable, but perhaps cannot be helped within the foreseeable future). While not perfect, this alternative would make the airport much better for airport users, while minimizing impacts to off-airport lands. Btw, a vehicle service road could be added as well, but that road certainly does not need to be placed right along the taxiway.

I suggest you also consider Realistic Alternative No. 4, which would be the same as No. 3, except that it would also move the Hubbard Highway to the west as far as possible while still keeping it within the existing ODOT right-of-way. Of course, this variation would require cooperation/consent from ODOT, but it would avoid the need for acquisition of a large number of private properties. While this approach may not fully resolve the issue of vehicles traversing through the ROFA, it may enable cost-effective mitigation of that problem. To my knowledge, there is no law of nature, or anything in the Oregon Revised Statues, or any FAA or ODAV rule, that requires that a highway be centered within a public right-away.

Of course there are many other possible variations on this theme. My main point is that the time has come for ODAV to turn its attention to thinking about and exploring feasible alternatives that actually could be accomplished at the Aurora State Airport. If ODAV and CWE are unwilling to explore such alternatives (i.e., projects that would be less-than-perfect but feasible within the near term), then please explain to the PAC why that is.

Thank you for considering this input.

Sincerely,

George Van Hoomissen

Hi Brandy,

Thanks for your email below. To be clear, I was not inquiring about the inclusion of comments that I made verbally during the meeting. What I want to make sure is included is the comments that I provided in writing, shortly after the meeting, by way of my letter dated August 1, 2024, a copy of which I have attached to this message. Please confirm that you will be including the attached letter as part of the public comments that will be available on your website.

Regards,

George

Hi George,

Thanks for your comment and I apologize for the delayed response. We are currently finalizing the summary and we do have your comments from the meeting included. As soon as that document is finalized, we will post it to the meetings page with the other July 30th materials.

Thanks,
Brandy

Hiya Tony,

Attached was a public comment that was submitted back in September for the PAC meeting. At the time I had received it I thought it was for the State Board (I did forward this comment on to the board so it is possible Cathryn has already given it to you) but I think it may need to go to the PAC as it directly talks about the PAC meeting that had taken place.

I apologize that I am just now getting it to you. I was about to upload it onto the website for the board meeting when I noticed it was for the PAC meeting.

Thank you,

Alex Thomas, Planning & Project Manager; Brandon Pike, Aviation Planner

Gentlemen:

I am writing to provide comments regarding your most recent presentation to the Planning Advisory Committee for the Aurora State Airport Master Plan, which was presented to the PAC during the online meeting on July 30, 2024.

As a part of the July 30th presentation, ODAV's consultant Century West Engineering (CWE) explained that, after extensive analysis and consultation with ODAV and the FAA, CWE has determined that the Aurora State Airport currently does not meet applicable FAA design guidelines for a variety of reasons, including unacceptable items in the Runway Object Free Area (Hubbard Highway, Keil Road, ASOS equipment, wind cone), unacceptable items in the Runway Safety Area (south-end drain field, open drainage ditches), unacceptable direct runway access from aprons/hangars, and a runway length that is approximately 500' too short to meet the RDC C-II requirements.

Next, CWE explained that they had developed three "Refined Preliminary Alternatives" (identified as Alternatives 1A, 1B, and 2), each of which presents a potential way that ODAV could conceivably bring the airport into compliance with FAA requirements. Notably, all three of those Refined Preliminary Alternatives include lengthening the runway by 497' to the north (bringing the runway length to 5500'), which apparently could be accomplished on existing ODAV property, with no taking of any private property required at all. I want to point out that, even though this one airport improvement (i.e., a 500' runway extension) would not on its own resolve all of the airport's current deficiencies, nevertheless it would unquestionably make the airport significantly safer for all airport users, and I believe it would be a giant step toward meeting the FAA requirements applicable to this type of airport. Other minor changes to the airport could be made that would address many of the other deficiencies (e.g., moving the windsock and ASOS equipment, replacing open drainage ditches with covered drainpipes, etc.), without requiring significant land acquisitions or negative impacts on properties adjacent to the airport which are now privately owned.

However, as CWE explained during the July 30th presentation, in order to meet all of the FAA's guidelines, either the Hubbard Highway would need to be moved to the west, requiring acquisition and clearing of 39 to 43 acres of private commercial and residential property that is west of the current Hubbard Highway (as detailed in Refined Alternatives 1A and 1B), or the runway would need to be moved to the east, requiring acquisition and clearing of 37 acres of private property that is east of ODAV's current property line and is now in active aeronautical use (as detailed in Refined Alternative 2).

This work by CWE has produced some useful information, and it has been a necessary and helpful part of the Master Plan process – identifying the airport's current deficiencies and exploring the potential implications of various possible ways that the deficiencies, theoretically, could be fixed. Unfortunately, but most importantly, what I believe this work has revealed is that none of the Refined Preliminary Alternatives is even remotely realistic. In fact, I highly doubt that there is anybody at ODAV or CWE who believes that

any of the recently-presented Refined Alternatives will actually be implemented at any time during the Master Plan planning period. All of the presented alternatives are, in my opinion, obvious non-starters, as each of them would require a massive expenditures of public funds, at a level that is extraordinarily unlikely ever to be made available; and regardless which of the alternatives were to be pursued it would be nearly impossible to adequately justify the impacts on adjacent property owners.

While I would very much like to see the Aurora State Airport improved so that it would meet all FAA design guidelines, it is my opinion that this goal realistically cannot (and therefore will not) be achieved within the coming decades. Therefore, it would be very useful for ODAV to direct its consultants to begin exploring ideas for airport improvements that realistically could be accomplished within the Master Plan planning period.

To that end, what I would like to see is CWE developing and presenting to the public some alternatives for projects that would lead to substantial measurable progress in eliminating current non-standard conditions at the airport and that would move the airport meaningfully towards meeting RDC C-II requirements, while also acknowledging that, as a practical matter, it is extremely unlikely that the airport will ever be able to achieve 100% full compliance with FAA design guidelines.

I suggest that ODAV consider what I will call Realistic Alternative No. 3: Leave the runway right where it is now, but extend it 500' to the north. This could be done with or without various other minor changes on the airfield (such as moving the windsock and ASOS equipment and covering drainage ditches) and leaving the Hubbard Highway unchanged (noting that this would still leave the Hubbard Highway within the ROFA, which is undesirable, but perhaps cannot be helped within the foreseeable future). While not perfect, this alternative would make the airport much better for airport users, while minimizing impacts to off-airport lands. Btw, a vehicle service road could be added as well, but that road certainly does not need to be placed right along the taxiway.

I suggest you also consider Realistic Alternative No. 4, which would be the same as No. 3, except that it would also move the Hubbard Highway to the west as far as possible while still keeping it within the existing ODOT right-of-way. Of course, this variation would require cooperation/consent from ODOT, but it would avoid the need for acquisition of a large number of private properties. While this approach may not fully resolve the issue of vehicles traversing through the ROFA, it may enable cost-effective mitigation of that problem. To my knowledge, there is no law of nature, or anything in the Oregon Revised Statues, or any FAA or ODAV rule, that requires that a highway be centered within a public right-away.

Of course there are many other possible variations on this theme. My main point is that the time has come for ODAV to turn its attention to thinking about and exploring feasible alternatives that actually could be accomplished at the Aurora State Airport. If ODAV and CWE are unwilling to explore such alternatives (i.e., projects that would be less-than-perfect but feasible within the near term), then please explain to the PAC why that is.

Thank you for considering this input.

Sincerely,

George Van Hoomissen

Comments or questions?	George Van Hoomissen (You): Question for the FAA representative — with the just disclosed preferred alternative, is it possible that the FAA would grant (or entertain a request for) a waiver/modification to the design standards to allow the runway extension to happen first, with other more expensive and difficult phases to follow? Note, I think most pilots would agree that the one change that would most positively impact airport safety is the contemplated 497' runway extension. I would like to receive email updates.

Aurora State Airport Master Plan Website Comments

Name	George Van Hoomissen
Comments or questions?	George Van Hoomissen (You): ODAV's consultants says that their "refined preliminary alternatives" were based in large part on what the consultants were told by FAA personnel as to what the FAA would allow, but the FAA representive has stated clearly that the FAA is not dictating what is in the master plan. So perhaps the consultants have misunderstood the input from the FAA and the consultants should go back to reconsider potential alternatives -- even potentially as interim solutions -- even if the other potential alternative would not meet 100% of design standards. Is it ODAV's understanding that the master plan must show a plan to acheive full compliance with design standards, but AFTER the plan is approved then ODAV could request a waiver/modification to allow a project intended to achieve an interim step that would move toward, but not fully meet, the design standards?

Subject: RE: Aurora State Airport Master Plan Website Comments - George Van Hoomissen

Or better yet, maybe ODAV and Century West could just publicly admit that, in fact, there is no such requirement from the FAA.

The FAA wants the master plan to show a pathway to potential/eventual full-compliance. After that, the sequencing of projects will be up to ODAV, with the only requirement from the FAA being that the projects move the airport toward full compliance.

As noted in my prior email, the most important improvement needed at UAO is a longer runway. It makes no sense to hold that improvement until you have completed other improvements that are clearly not achievable within the foreseeable future. The runway extension is feasible right now, without requiring any property acquisition at all.

George

Comments or questions?	Your Project Update dated 10/15/2024 regarding the Preferred Alternative said: "The phases of these projects are in no specific order of implementation; however, based on FAA input, the phase to extend the runway would not occur until the phase to meet ROFA and RSA standards are completed." I am interested in knowing more about the "FAA input" on this topic. Has ODAV or ODAV's consultants received anything from the FAA in writing which states that the proposed runway extension may not be completed until after all ROFA and RSA standards have been met? If so, please provide copies of any such documents from the FAA.

Subject: Hot Spot mitigation

Date: June 21, 2024 at 10:50:27 AM PDT
To: Alex.R.Thomas@odav.oregon.gov
Reply-To: Dave Waggoner <dave@WillametteAir.com>

Upon a review of Figure 11, page 13, from the Preliminary Alternatives Summary, an important feature of the Hot Spot mitigation plan was omitted. The intent of the modification is to eliminate Hot Spot 1 and mitigate the traffic congestion on the Alpha Taxiway when runway 17 is in use.

To eliminate the Hot Spot aircraft taxing would need to make two ninety turns to enter the runway as depicted. Does the ALP need modification to allow access from the TTF property just north of the airport property at A1?

The second element is to reduce the traffic congestion that bottlenecks taxiway A. This is accomplished by establishing an exit only lane from the movement area. See the attached diagram and FAA 7460-1. The aircraft traffic flow on the TTF, non-movement area will be controlled by signage, pavement markings and reflectors.

Please let me know if you have any questions.

Tony and Brandy,

I’m not sure who is the proper person is to get this in the Master Plan conservation and to the other PAC members for consideration. If it is not you, please let know where to send this thought.

Could we consider an option to moving Hubbard Highway west as recommended in Refined Alternatives 1A and 1B? Instead of shifting the Hubbard Highway west could Hy 551 be rerouted over the existing Boones Ferry Rd NE?

Using Boones Ferry Rd as the location for Hy 551 I believe has several advantages over moving the current highway west.

First, it would eliminate the need acquire the approximately 39 or 43 acres of property. It would also eliminate the disruption of causing the relocation of residents and business.

Secondly, it is possible the cost of making the additions required for the Boones Ferry Rd/Hy 551 corridor would cost less than moving and rebuilding the old highway.

Thirdly, it would eliminate the sections of Hy 551 that are in the north and south RPZ.

Hello everyone,

I wanted to send you a reminder for our next meeting on October 15. We won't be sending any other materials before the meeting; however, the summary from our last meeting has been added to thewebsite's meeting page.

Date/Time: Tuesday, October 15, 2024 from 5:00-8:00 p.m.
Topic: Continue discussions about the Aurora State Airport Master Plan Alternatives.
Materials: agenda (posted at publicproject.net/AuroraAirport)
Location: Zoom

- PAC members have been registered via Zoom and will get an email directly from Zoom with the login information (please check your junk folder). Please do not forward this email to anyone.
- Anyone else can attend the virtual meeting with this link: https://us02web.zoom.us/j/84488377615

If you have any questions, please reach out to me.

Thanks,
Brandy

Subject: Aurora Airport - PAC meeting #7 scheduled for Tuesday, October 15, 2024

Hi PAC members,

Thank you all so much for taking the time to submit your comments to the team over the last month. Some of you submitted very lengthy responses and the technical team needs more time to review and draft responses that we can bring back to the group. We also want to be respectful of your time, so we are going to reschedule our September 17 meeting to October 15.

Date/Time: Tuesday, October 15, 2024 from 5:00-8:00 p.m. *(please note this is an hour longer than our normal meeting time).*
Topic: Continue discussions about the Aurora State Airport Master Plan Alternatives.
Materials: Posted on the website: https://publicproject.net/AuroraAirport#
Location: Zoom

- PAC members have been registered via Zoom and will get an email directly from Zoom with the login information (please check your junk folder). Please do not forward this email to anyone.
- Anyone else can attend the virtual meeting with this link: https://us02web.zoom.us/j/84488377615

If you have any questions about the reschedule (or anything else) please reach out to me.

Thanks,
Brandy

Subject: RE: PAC

Hi all,

I am sorry but we can't make last minute changes to the PAC. As you know, there is a lot of interest from airport users and local communities in representing a wide range of organizations for the UAO master plan. Our PAC is already significantly larger than used for most master plans, and our goal is to be as fair and transparent as possible. Most importantly, we value the feedback from the members of the organizations that we have requested representation on the PAC for this master plan.

The process in which we conduct the master plan for UAO is very important. For 3 years since this process started we have made sure that all PAC members had equal opportunities for engagement. This includes, for public benefit, transparency in who represents organizations and communities throughout this process. The PAC list is published on the project website.

The public will have ample opportunities to provide comments in the meeting as long as time allows. If there is not enough time, the public can submit written comments that will be considered by the planning team and included in the public record for this master plan.

Thank you for your understanding,

Tony Beach

Master Planning Committee,

I would like to appoint Betsy Johnson as my alternate for the PAC meeting this evening.

Please confirm receipt of this email and the appointment has been made.

I also want to register my concern on how the current Preferred Alternate would effect the emergency services provided from our property on the Airport and the devastating impact on our airport neighbors.

The Preferred Alternate would displace many of the airport neighbors living to the west of the Hubbard Hwy. Many of the residents are retired and living on a fixed income. In a time where there is a housing shortage, forcing the residents out of their homes would a horrendous burden.

The Civil Air Patrol (CAP) and the Disaster Airlift Response Team (DART) both have facilities on our property to support of Oregonians during and after an emergency.

We provide, at no cost, a facility where the CAP has established a permanent Emergency Operations Center (EOC). The CAP has installed communications equipment to coordinate their efforts with State and Federal agencies in responding to disasters. It is a communications hub for Oregon and Southwest Washington.

The EOC also is the home for a CAP Cadet program. CAP's cadet program is designed to inspire the country's youth to become leaders and good American citizens through their interest in aerospace and service to the country. Cadets work their way through a series of achievements by completing studies and other activities. Some of the achievements include aerospace education, moral leadership, physical fitness, drill and ceremonies, leadership, and other special activities.

The EOC is also used as a staging area for Oregon DART. This distribution hub is used to store and transport emergency supplies, medical equipment and responders from Aurora to outlying communities impacted by fire, floods and other natural disasters.

If the current Preferred Alternate is adopted, the EOC building would be demolished, forcing the EOC to be closed. This would significantly Oregon's emergency

preparedness response.

Thank you for your consideration,

David Waggoner

State Aviation Board Member-
Re: Aurora State Airport Master Plan
I won't be able to attend the North Marion High meeting tonight to discuss the Airport Master Plan. I would like to itemize the problems or issues with the plan from my perspective as a home owner.
-I live in Charbonneau and have for the last 15 years. Over the last 4-5 years the number of aircrafts and the overflight noise has increased greatly which makes it very difficult to hear when sitting on my porch when the planes fly so close over Charbonneau. It sometimes feels like the plane is going to crash. The noise level is much more obvious at Charbonneau than downtown Wilsonville because the flight plans go straight over Charbonneau.
-to extend the airport runway will allow larger aircrafts to use it and increase even more the noise level. The infra structure to support increase usage is not mentioned in any of the master plans I have read. Why is that? Traffic on I-5 is already horrendous and the rural roads around the airport cannot handle more cars/trucks.
-if only the flight plans to depart and arrive would be vectored away from Charbonneau. I can see the aircraft markings from my porch so they are sometimes not very high in the sky….. For example why can't the planes fly over I-5 or over the many acres of forest and farm land to access the runway. Take the planes away from the populated areas of Wilsonville. Think of options which will accomplish what both the locals and the airport want… a compromise so one side isn't the loser.
-I fear the interests of our neighborhoods have taken a back seat for financial gain of the airport businesses and the ODA. The methods that the ODA has taken to push this master plan in the past is evidence of my concern.
-Bigger doesn't mean better nor changing what has worked for this small airport. Put the interest of local residents as the reason to NOT implement the master plan. Consider the future of the communities who have to live around the airport

Re Comments on FAA Forecast Approval letter and Chapter 3 Airport Activities Forecast

The FAA "Aurora (UAO) Aviation Activity Forecast Approval letter of November 15, 023 (Corrected January 23, 2024) approves the aviation forecasts from the current Aurora Airport Master Plan process for airport planning purposes. These forecasts are detailed in the table "Airport Planning and TAF Forecast Comparison" derived from data in Chapter 3 (Aviation Activity Forecasts) of the master plan.

The Forecast approval letter goes on to state:

Our approval is based on the following:

- *The forecast is supported by reasonable planning assumptions and current data*
- *The forecast appears to be developed using acceptable forecasting methodologies*
- *The difference between the FAA Terminal Area Forecast (TAF) and the Airport's forecast for total operations is within the 10 percent and 15 percent allowance for the 5 and 10 year planning horizons.*

Master Plan Aviation Activity Forecasts – Chapter 3

The Forecasts chapter lists four Operations Forecast Models that were agreed on with the FAA for consideration in in developing the aviation forecasts for UAO. They are:

- Hybrid TFMSC Itinerant/FAA National Aerospace Forecast GA Local Operations Model
- Marion and Clackamas County Combined Population Growth Model
- National Aerospace Forecast Operations (Airports with ATCT)
- Federal Contract Tower TAF State (Oregon) Model

On page 3-26 the section "Recommended Aircraft Operations Forecasts Summary" states:

The Marion and Clackamas County Combined Population Growth Model *is the recommended aircraft operations forecast for the 2021-2041 Aurora State Master Plan. In lieu of representative operational data specific to the Airport, population growth forecasts developed for the two counties most contributing to the Airport service area were selected to indicate future operational activity. The model assumes that operations will track with the local population as it reflects the number of people likely to use airport services. This model reflects*

the best data available considering the limitations of the available ATCT traffic counts. The model projects an average annual growth rate of 0.9% over the planning period.

No substantive justification is provided or data presented to make the case that The Marion and Clackamas County Combined Population Growth Model is more accurate and superior to the Federal Contract Tower TAF State (Oregon) Model beyond the assertion: "The model assumes that operations will track with local population, as it reflects the number of people likely to use airport services. This model reflects the best data available considering the limitations of the available ATCT traffic counts."

Validity of data

As stated, The Marion and Clackamas County Combined Population Growth Model projects a 0.9% average growth rate of the planning period of 20 years (from 2020 to 2040), and also states that "The model combines the Portland State University (PSU) Population Research Center (PRC) population forecasts for Marion and Clackamas Counties over the planning period." However, no references or supporting data from the PSU Population Research Center are presented, and the 0.9% AAGR number does not hold up to scrutiny.

Oregon's population has been in flux for the past four or five years, with some years showing population decline. PSU data for the period April 1, 2020 to July 1, 2022 (attached) show the following percent change in AAGR:

Clackamas County	0.9%
Marion County	0.3%

For the year 2023, they show the following change in AAGR:

Clackamas County	0.59%
Marion County	0.29%

The PSU forecast data by County (PSU-PRC Regional Meeting; Preliminary Population Projections), show population forecast for each Oregon county. The forecasts for Clackamas and Marion County do not show the 0.9% AAGR stated in the Aviation Activity Forecasts chapter of the master plan. Specifically, for the planning period they show the following (attached):

Clackamas County	0.72%
Marion County	0.46%

Furthermore, no empirical evidence is presented that there is ANY relationship or correlation between general population growth and increased operations at this airport or any other airport. This conclusion that general population growth corresponds to airport operations appears to be a long stretch to justify a higher forecast without any supporting documentation.

The Marion and Clackamas County Combined Population Growth Model, which was selected without justification or supporting data, does not result in an AAGR of 0.9% as alleged, but using a population-weighted average results in 0.62%.

Forecast Model Selection

The Marion and Clackamas County Combined Population Growth Model was selected without supporting data or justification, and the Federal Contract Tower TAF State (Oregon) Model dismissed with a statement about "*the limitations of the available ATCT traffic counts."*

Figure 3-6: Operations Forecast Models illustrates what is now common knowledge: there are 7 years of FAA operations data for UAO (FAA's ATADs data) which covers all operations during tower operation (daylight hours). The master plan process has an adjustment factor for non-tower operational hours. The point is that given the wildly overstated and erroneous that ALL previous operations forecasts have been there is 7 years of validated objective data. However, the forecast model that used this data was not selected.

That model, the Federal Contract Tower TAF State (Oregon) Model, is described in Chapter 3 as follows:

> *This model applies the Oregon Federal Contract Tower TAF forecast annual growth rates for aircraft classifications to Aurora State Airport's baseline operations counts (using the same classifications) over the 20-year period. The model assumes that operations at the Airport will be consistent with FAA's Terminal Area Forecast (TAF) for Oregon airports with contract air traffic control towers. This model provides a more focused regional assessment within the TAF, compared to the TAF national model for contract tower airports, as these airport are the most operationally similar to Aurora State Airport in the state. The model is non-linear and year-over-year growth rates vary. The model assumes that the Airport's operations will mirror state trends. The model results in an average annual growth rate of 0.6%.*
>
> *This model provides a projection of future changes in the Airport's annual aircraft operations that is consistent with the trends defined by FAA for similar Oregon airports with contract air traffic control towers. Similar to the contract tower model used for based aircraft forecasting, this projection does not establish an historical statistical relationship between the Airport and the larger data set, although it does provide a reasonable projection for long term planning. The underlying assumption is that future activity within a group of similar Oregon contract towered airports will be similar, and that on the whole, this activity will be consistent with the FAA's broad expectations defined in its TAF.*

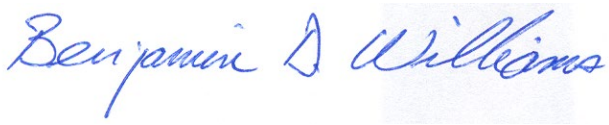
Of note, Federal Contract Tower TAF State (Oregon) Model, results in an AAGR of 0.6%.

The Marion and Clackamas County Combined Population Growth Model which was selected without justification or supporting data results in an AAGR of 0.9%.

It is no coincidence that a model resulting in a higher growth rate was selected.

The question that has to be answered, however, is what process and methodology was used by ODAV and its consultant along with the FAA to eliminate the Federal Contract Tower TAF State (Oregon) Model which is based on objective historical data at UAO and similar airports, and rather select The Marion and Clackamas County Combined Population Growth Model which not only resulted in a higher forecast rate, but is based on questionable population growth projections and a fundamentally flawed assumption that "that total airport operations will track with the combined population of Marion and Clackamas Counties."

Sincerely



Ben Williams, President

Population Research Center
PORTLAND STATE UNIVERSITY

2022 ANNUAL OREGON POPULATION REPORT TABLES

The population data in the 2022 annual report tables were compiled by the Population Research Center, Portland State University, 4/15/2023.

The tables in this workbook present the 2022 population estimates produced by the Population Research Center, Portland State University. The July 1 estimates of total population for counties and cities and towns were certified December 15, 2022.

Some tables include the U.S. Census Bureau's decennial Census counts and historical population estimates produced by our Center, and other tables include calculations of change since Census 2020. Also included are population estimates for broad age groups and 5-year age groups.

Contents of Sheets:

Sheet Name	Table Name and *description*
Table 1:	**Annual Population and Components of Population Change for Oregon: 1960-2022; July 1 Population Estimates and April Census Counts.** *Annual populations, population change and the components of population change (births, deaths, natural increase, and net migration) are reported for Oregon.*
Table 2:	**Population Estimates of Oregon by Area type and Specific Metropolitan Areas: 2000 to 2022.** *Population estimates are aggregated for incorporated and unincorporated, metropolitan and non-metropolitan areas in Oregon. Populations are also reported for each of Oregon's eight Metropolitan Statistical Areas, as designated by the U.S. Census Bureau.*
Table 3:	**Components of Population Change for Oregon's Counties: April 1, 2020 to July 1, 2022.** *Populations are reported for Oregon and the 36 counties; population change and the components of population change from 2010 to 2020 are also included.*
Table 4:	**Population for Oregon and its Counties and Incorporated Cities and Towns: July 1, 2020-July 1, 2022; and Census Counts 2000-2020.** *Annual population estimates from 2020-2022are reported along with April 1 Census counts from 2000-2020. Sub-county population estimates are grouped by county; cities that are split between counties are reported in parts respective to their county location. Population estimates for the county unincorporated areas are also reported.*

Table 5: **Populations for Incorporated Cities Located in More than One County.**
Annual population estimates for 2020-2022, and 2010 and 2020 Census counts, for city parts by county are reported in this table.

Table 6: **Rank of Incorporated Cities and Towns by July 1, 2022 Population Size.**
This table displays the rank order of Oregon's incorporated cites and towns by 2022 population size, largest to smallest.

Table 7: **Alphabetical Listing of Oregon's Incorporated Cities and Towns with Populations for July 1, 2022 and Census 2020, and Change since Census 2020.**
Population estimates for 2022 and Census counts for 2020 are reported, along with numerical and percentage changes during the time period.

Table 8: **Population Added to Incorporated Cities Due to Annexations: April 1, 2020 - July 1, 2022.**
This table is a listing of Oregon's cities and towns in alphabetical order with the numbers of persons they have annexed since Census 2020.

Table 9: **Population Estimates by Age and Sex for Oregon and Its Counties: July 1, 2022.**
Population estimates for Oregon's counties by 5 -year age group are reported in three tables: 1) total population; 2) male population; and 3) female population. Population estimates for ages 15-19 are split into 15-17 and 18-19 age groups.

Table 10: **Population Estimates by Broad Age Group (<18 Years, 18-64 Years, & over 64 Years)**
Population Estimates for ages 0-17 years, 18-64 years, and 65 years and older are reported in this table for Oregon and its counties.

Proposed Forecast Results

Portland State UNIVERSITY

Population of Marion County is projected to grow from nearly 350,000 in 2020 to over 375,000 by 2070.

The growth rate is projected to decline from 0.6% to close to 0% between 2020 and 2045. The population is projected to remain stable without major change from 2045 to 2070.

AIRCRAFT OPERATIONS FLEET MIX AND SPLITS

The distribution of total operational activity attributed to each of the five primary types of aircraft – single engine piston, multi-engine piston, turboprop, jet, and helicopter – is called the fleet mix. An understanding of the current and projected fleet mixes enables airports to plan for improvements to accommodate for growth or decline in activity by the specific aircraft type.

The fleet mix is derived from the current and projected operations totals established in the existing conditions analysis (base year counts) and the preferred forecast (projected estimates). ATCT operations counts do not distinguish between the individual aircraft types. So, fleet mix shares are estimated based on ancillary information, including TFMSC data, national trends, and input from knowledgeable sources such as ATCT controllers.

Some people who received this message don't often get email from fofp99@gmail.com. Learn why this is important

This message was sent from outside the organization. Treat attachments, links and requests with caution. Be conscious of the information you share if you respond.

Chair Stephens;

I'm sure that burned into your memory, as it is the memories of all of us who were on the Teams call for the State Aviation Board (SAB) meeting last week, was among the final comments made by Board member Jim Knight: "What a conundrum."

As you subsequently pointed out when you agreed to carry the Aurora State Airport Master Plan agenda item forward to the October SAB meeting for continued discussion: "Those of us operating airports understand that there are finite resources for airport improvement projects and there's just not enough money to go around… Millions and millions of dollars going to a general aviation airport would take away funds from other airports across the entire system."

The sad reality is that once again as a master plan process for the Aurora State Airport draws to a conclusion, the options are appalling and terribly expensive. I would point you to page 9 of draft Chapter 5 of the master plan which states: **"Aurora State Airport is located on a constrained site."**

This fundamental reality was a recurring theme in the 2010–2012 master plan process. One that was acknowledged in the recommendation by ODAV and the engineering consultant to select a No Build alternative. That recommendation was overruled by Chair Gardener and the SAB, which led to over a decade of pursuing unattainable expansion alternatives and incurring huge, budget-busting legal expenses to defend those illegal expansion decisions at the Land Use Board of Appeals and the Court of Appeals and the Supreme Court — where each government body ruled against ODAV's expansion plans as a violation of state laws.

I write this letter to you and the Aviation Board not just to recapitulate the history of the last master plan process of which you were not a part, but also to correct some of the statements, inferences and implications made to the Board at last week's meeting by Century West and ODAV personnel.

After the PAC was assembled for the current master plan and the first meeting was held, I sent the following to then-Chair Meeker and the Board on December 2, 2021:

> *My comments have to do with the Public Advisory Committee, whose first meeting on November 16 [2021] kicked off the current master planning process for the Aurora State Airport.*
>
> *In case you are not aware of the contents of that meeting, I want to share with you what was presented to the PAC by the lead Century West consultant on a slide titled "Decision-Making Process":*
>
> - *PAC will provide input at key decision points in an advisory level; as a sounding board. No recommendations will be made*
> - *ODA staff will be the final decision-making authority*
>
> *I am here to say to you that this is a travesty. It is quite evident that no one at OAB or Century West or JAL, the facilitator, owns a dictionary or knows how to use one. Because if you look it up, you will learn that Recommendation is a synonym of Advice.*
>
> *So, the notion that you can have an "Advisory" committee that will make no recommendations is a contradiction in terms and outlandish.*

I share this to make sure you understand that some of the PAC members are on record noting that the PAC was not intended to provide recommendations, but only to be a sounding board.

This is important given the implications of what the Board was told last week. Matt Rogers, Century West project manager, spoke of “Extensive public involvement” and listed 6 PAC meetings, 2 Open Houses and 3 Work Sessions. For the record, the earliest PAC meetings had no public involvement because the Zoom calls were limited to PAC members. Then after complaints, members of the public were allowed to participate, but they had to pre-register before the meeting in order to attend. Finally, members of the public were allowed to speak in the public comments section at the end of the meeting. ODAV appears to have failed to promote the ONE Open House event held on June 13, 2024; however, due to a massive mailing by the City of Wilsonville alerting the public to the Open House event, public attendance was high, but then JLA Public Involvement ran out of public comment forms after about one hour into the three-hour event, thereby preventing a majority of attendees from providing written public comment.

The implications made by David Miller of Century West were that PAC input specifically shaped the draft chapters in the master plan, and particularly the iterations of the alternatives. That is not the case. The draft chapters were presented to the PAC as completed documents in lecture format, and the only adjustments made were after the fact following challenges to data and data errors pointed out.

In early June, draft Chapter 5 was provided to the PAC with 7 alternatives, four that promoted C-II ARC designation and three that maintained the current “as built” reality of B-II. Then, just prior to the Open House held at North Marion on June 13, the PAC was notified that the three alternatives to maintain B-II had been withdrawn and would no longer be considered “after coordination with FAA.” You can imagine the surprise! The majority of PAC members and the public arrived at the Open House event to learn that nearly half of the alternatives had been removed from consideration.

Then at the next PAC meeting on July 30, 2024, the members were informed that the four alternatives that remained and were on display at the Open House had been unilaterally reduced to three—all done without consultation with the PAC.

To summarize, the PAC has been informed (and mainly after the fact) from start to finish, but never consulted or asked for recommendations. Additionally, the fundamental flaw of trying to force not just a C-II ARC designation (per an FAA approved airport layout plan) but airfield build out to C-II standards continues to ignore the fundamental reality noted above: this is a constrained site.

That very reality in addition to a decade of legal battles and now the “conundrum” that the three final alternatives will cost “hundreds of millions of dollars” and negatively impact the regional aviation system cries out for the recognition of reality.

Accompanying that recognition of reality would be a formal revision to B-II and ceasing the futile efforts to expand the Aurora State Airport into something it can never be.

Sincerely

Hi Ben,

Thanks for the email. In the October PAC meeting we will review the refined alternatives, PAC feedback form results, answer PAC questions, and review the preferred alternative. We'll also talk about next steps for the project. I hope that helps answer your question.

Thanks,
Brandy

Hi Brandy;

I have a question about your email below Re: the next PAC meeting.

You say: **Topic**: Continue discussions about the Aurora State Airport Master Plan Alternatives.
I thought the next meeting, following the reduction of alternatives down to the final three as presented at the last PAC meeting, would be the presentation for the preferred alternative.

What is there to "discuss" given that the FAA orientation is one of the three and FAA said select one of these expansion alternatives or be moved to "maintenance only?"

Thanks

Ben Williams

Subject: Aurora Airport - PAC meeting #7 scheduled for Tuesday, October 15, 2024

Hi PAC members,

Thank you all so much for taking the time to submit your comments to the team over the last month. Some of you submitted very lengthy responses and the technical team needs more time to review and draft responses that we can bring back to the group. We also want to be respectful of your time, so we are going to reschedule our September 17 meeting to October 15.

Date/Time: Tuesday, October 15, 2024 from 5:00-8:00 p.m. *(please note this is an hour longer than our normal meeting time).*
Topic: Continue discussions about the Aurora State Airport Master Plan Alternatives.
Materials: Posted on the website: https://publicproject.net/AuroraAirport#

STEPHENS Cathryn E <CStephens@eugene-or.gov>
Subject: Re: Aurora Airport Master Plan Preferred Alternative

Brandy;

Thanks for the explanation of how subsections (5) and (7) work. It does seem that the explanation is missing the board's role in subsection (6). The board is charged with adopting the findings and the master plan. The board can presumably accept, reject, or revise the findings and/or the plan. The Court of Appeals emphasized the Board's role under subsection (6) in the very first paragraph of the opinion. See also pages 325-327, and 330-331.

Subsection (6) is the crucial piece of the land use compliance, and it feels like there's an effort to sideline the board on this and other topics. At a recent meeting the board requested more time to review the three alternatives, but that topic has not appeared on another board agenda. The board also asked about project costs for the alternatives. When will cost estimates be provided?

Sincerely

Ben Williams

AC MEETING #7 AGENDA

Date/Time: October 15, 2024, from 5:00-8:00 pm

Location: Zoom Webinar: https://us02web.zoom.us/j/84488377615

Meeting Goals: Continue discussions about the Aurora Airport Master Plan Alternatives.

Time	Topic	Person
5:00-5:15 pm	**Introductions**	Brandy Steffen
5:10-5:20 pm	**Review feedback form results**	David Miller
5:20-5:30 pm	**PAC clarifying questions**	Brandy Steffen
5:30-5:40 pm	**Review refined alternatives**	David Miller
5:40-5:50 pm	**PAC clarifying questions**	Brandy Steffen
5:50-6:10 pm	**Review preferred alternative for Master Plan**	David Miller
6:10-7:40 pm	**PAC questions and comments**	Brandy Steffen
7:40-7:55 pm	**Public Comments** · Comments may be emailed before the meeting through the website: https://publicproject.net/AuroraAirport# · Commenters may have up to 2 minute to speak. We ask that only one representative from each organization speaks. We may not be able to hear from everyone. · *Reminder:* public comments typed into Zoom may not be answered during the meeting, but answers will be included in the written meeting summary.	Brandy Steffen
7:55-8:00 pm	**Next Steps**	Brandy Steffen

A meeting summary with all PAC and public comments will be posted to the project website.

***

I sent Brandy Steffen of JLA Public Involvement the following question: “What is there to ‘discuss’ given that the FAA orientation is one of the three and FAA said select one of these expansion alternatives or be moved to ‘maintenance only’?”

Her response was: “Thanks for the email. In the October PAC meeting we will review the refined alternatives, PAC feedback form results, answer PAC questions, and review the preferred alternative. We’ll also talk about next steps for the project. I hope that helps answer your question.”

The reason I send this email to you and the Board is that in the 2009-2012 Aurora Airport Master Plan process, the Department and their consultant presented to the Board at a scheduled Aviation Board meeting the alternatives in the master plan and formally presented the Preferred Alternative

(No Build) for the Board to approve and adopt. The Board did not do so, sending it back to the Department and directing them to do more work and return with an expansion alternative.

The point here is that the agenda implies that the Preferred Alternative decision has already been made by the Department without Board input and next week will be presented to the PAC. At the September Board meeting, Steve Nagy made the statement that the Preferred Alternative selection should be an ODAV decision.

Has the Preferred Alternative been presented to the Board? Did the Board make the decision or approve the department decision? Is it a Department decision or a Board decision? My understanding is that according to the Court of Appeals, the administrative rule OAR 738-130-0055, means the decision (approval and adoption) lies with the Board, not the Department.

The Board should take an active role in the selection of the preferred alternative, and consider a No-Build alternative as one of the potential alternatives.

Sincerely

Ben Williams, President

Subject: Comments in advance of Aurora Airport PAC Meeting 8 Roundtable Discussion

Brandy, et al;

Your last email re: PAC meeting 8 scheduled for next Tuesday states:

We are looking forward to seeing you at the **next meeting (VIRTUAL) on Tuesday, December 10, 2024 from 5:00-8:00 p.m.** The Planning Team and ODAV appreciates your feedback on the preferred alternative that was presented at PAC Meeting 7. Based on the feedback and requests to discuss the Preferred Alternative further, ODAV would like to use PAC Meeting 8 to review the noise analysis and have a roundtable discussion with you all regarding comments on the preferred alternative and any additional input or recommendations that you would like to bring to the meeting.

Please see attached comments from Friends of French Prairie.

The reality that is clearly now being avoided is that the almost two year delay in the master planning process has put us into the forecast period, and the present has caught up with the future.

The forecasted operations are already falling short of the real operation numbers, and those real operations numbers for 2022, 2023 and YTD 2024 are being ignored.

It is our hope that this reality will be discussed at next week's PAC meeting.

Sincerely

--
Ben Williams

Comments for Aurora Airport PAC Meeting 8 Roundtable discussion on Preferred Alternative

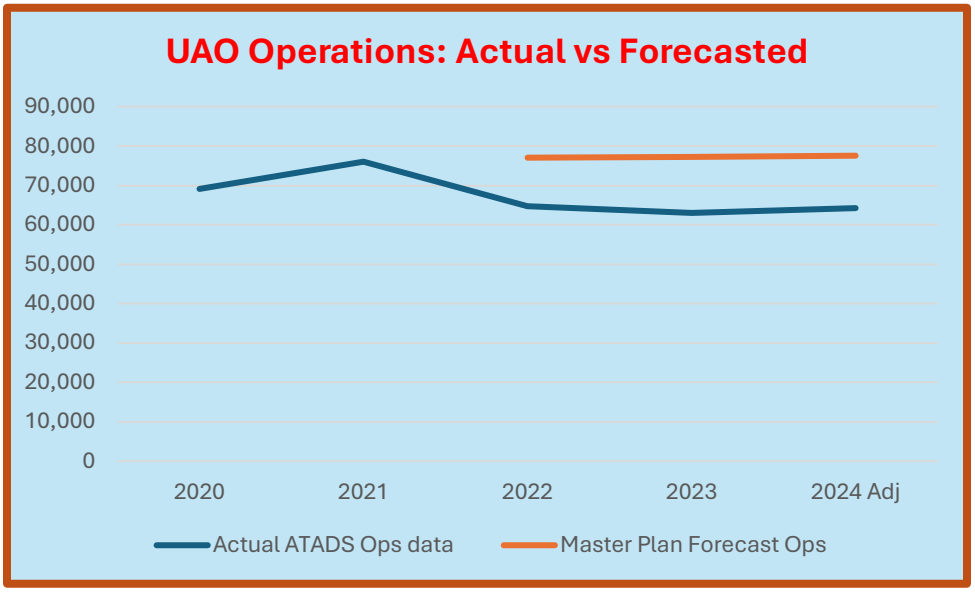
Friends of French Prairie has previously (March 12, 2024 letter) commented on the forecast approval by the FAA and specifically the selection of the Marion and Clackamas County Population Growth Model rather than the Federal Contract Tower TAF State (Oregon) Model.

Additionally, in Response 7 to Comments made at 11-15-24 PAC meeting, Century West and ODAV respond: *FAA has stated that alternatives that artificially downgrade to AAC/ADG BII do not reflect the current or forecasted operational environment at the Airport and they are not viable options*.

Compounding the problem of the forecast model chosen is a much more fundamental problem which is now visible due to the delay in the Aurora Airport Master Plan process which was originally expected to deliver a Final Report in March of 2023. The data set being used is 2016 through 2021, and we are now at the end of 2024.

Specifically, the forecast model selected is not only the one most favorable that results in the highest growth forecast, but it is built off the 2021 operations data. When compared to the subsequent years, 2021 can now be seen as a one-year fluke with increased operations followed by three years of reduced operations.

When total operations of 76,028 in 2021 are compared using the FAA's own ATADS data, 2022 dropped to 64,651, followed by a further drop in 2023 to 63,015, and a slight increase in 2024 to 64,259 (adjusting 2024 YTD data for twelve months). See attached ATADS data. All three of these subsequent years are lower than both 2021 and 2020, and look like this:



Note: 2024 Adjustment begins with Jan-Sep data and adds 16.5% (same % for period as 2023)

We are now in the forecasted period and are already falling far short of the forecasted operations.

The present has caught up with the future, and it is incumbent upon the FAA, Century West and ODAV to acknowledge this reality and correspondingly get real about the future of Aurora State Airport and give up on the outlandish and expensive C-II based Preferred Alternative, and seriously assess reverting to B-II status.

Ben Williams

Aurora Fire District No. 63

On Wed, Aug 28, 2024 at 1:10 PM Brandy Steffen <brandy.steffen@jla.us.com> wrote:

> Good day Chief Williams,

We appreciate you taking the time to review the draft refined preliminary alternatives for the Aurora State Airport Master Plan and providing valuable input. We understand your concern to maintain tax revenues that support the fire district. You are correct, the land the Oregon Department of Aviation (ODAV) owns is tax exempt; however, the private improvements on leased land (hangars, buildings, etc.) are taxed and invoiced by Marion County to ODAV, which are paid by the lessees.

The refined preliminary alternatives illustrates "priority" parcels that would need to be acquired by ODAV to meet Federal Aviation Administration (FAA) design standards as well as to support the existing and future facility needs. Property identified as reserve is shown in the event that the property becomes available for purchase, ODAV would be able to utilize federal funding to acquire the land. There is no timeline or requirement to acquire the reserve property.

Thank you again for your review and comments.

Thanks,
Brandy Steffen
(on behalf of the Oregon Department of Aviation)

Good morning,

I left you a voicemail this morning, but thought I would email you my question. I was reading the alternates for the UAO airport and could not help but to notice there was a lot of property acquisition. Specifically the property acquisition for aeronautic reserve, and the high priority acquisition. All of that property is currently privately owned, thus they pay property taxes. My question is who will be acquiring the proposed property for the reserve? Is it the State of Oregon, because if that is the case the state is exempt from paying property tax.

As an example, I pulled up only 5 parcels contained in the area and those 5 parcels bring the Aurora Fire District over $100,000 in tax revenue. If this represents only 5 parcels, one could imagine the impact of all of them to be significant.

The loss of revenue from just those 5 parcels alone would cause a devastating cascade of events that may lead to the loss of career staffing and end 24 hour career coverage.

I am looking forward to a response.

Greetings,

As a pilot who learned to fly at the Aurora Airport and has continued to use the airport's services for thirty years, I must strenuously object to the plan to condemn and remove existing hangars. The airport needs more general aviation hangars, not fewer.

Thank you.

Patrick Willis

Alex.R.Thomas@odav.oregon.gov

Dear ODAV c/o Alex Thomas,

As a pilot that flies off KUAO, please register and record my urgent input for the Aurora Airport Master Plan that is underway and my recommendation and request not to consider the condemnation and destruction of any aircraft hangars.

The number of planes at KUAO has steadily increased over the 40 years that I have had a plane based there. The airport's economic impact on the local area and region is significant and of course it has a tremendous impact on general aviation. Hangar space is already scant at the local GA airports making it expensive in the unlikely event hangar space can be found. It's also hard to justify the economic impact on the hangar owners who for the most part have the hangars for their pleasure flying not business. They have invested substantially in purchasing hangars to sublease for income or for personal use only. Condemnation and demolition is an unfair overreach of state government that creates a significant economic loss for those owners.

Thank you

Norman R. Willis, MD

Aurora State Airport Master Plan Website Comments

Name	Eric Winston
Organization	Self
Comments or questions?	There is already a huge shortage of hangars at Aurora. The proposed destruction of hangars makes no sense with the economic damage it will cause by evicting multiple businesses with no options of relocating at the airfield. A vehicle lane could be built away from the taxiway and would be much safer and not require hangar removal. I'm for all of the improvements at the airfield but only with no destruction of hangars. I also propose the ODAV approve the development and airfield access to more hangars on the north end of the airport to satisfy hangar demand without an undue red-tape filled approval process. I would like to receive email updates.

Dear Mr. Thomas,

Subject: Strong Opposition to the "Preferred Alternative" in the Aurora State Airport Master Plan

I am writing on behalf of Umpqua Bank to express our strong opposition to the "preferred alternative" proposed in the Aurora State Airport Master Plan. As a key stakeholder with ongoing investments in the airport we have significant concerns regarding the potential impacts of this plan on our operations and the broader economic environment.

The proposed 500-foot extension is inadequate to meet the needs of general aviation aircraft. This limitation could hinder the airport's ability to attract and accommodate a diverse range of aviation activities, ultimately affecting its economic viability. Additionally, the inclusion of a parallel taxi lane and a vehicle service road, which are not FAA requirements, appears to be an unjustified measure primarily aimed at property acquisition. This approach raises serious concerns about the fairness and necessity of such expansions.

The potential condemnation of properties, with compensation based on tax roll values rather than market value, is deeply troubling. This method fails to account for the true economic impact on property owners and does not cover costs related to business dislocation or disruption. The airport is a significant economic asset, contributing to job creation and local development. The current approach could lead to extensive legal battles over property rights and the legitimacy of the master plan, which the state cannot

UMPQUA BANK

afford. Such litigation would create an environment of uncertainty, negatively impacting ongoing and future investments.

We advocate for a phased approach to extend the runway, which would address immediate needs without unnecessary property condemnation. This strategy would allow for incremental development, ensuring that the airport can grow sustainably. We urge the Oregon Department of Aviation to engage in mediation through Oregon Solutions to facilitate open discussions and build consensus among all stakeholders. This process would help address concerns and find mutually beneficial solutions. It is crucial to improve public involvement and transparency in the planning process. Ensuring that all stakeholders have a voice and that their concerns are adequately addressed will foster a more collaborative and supportive environment.

Umpqua Bank remains committed to supporting the development of Aurora State Airport in a manner that balances economic growth with the rights and interests of all stakeholders. We strongly urge the Oregon Department of Aviation to reconsider the "preferred alternative" and adopt a more inclusive and sustainable approach to the airport's master plan.

Thank you for your attention to this matter. We look forward to your response and are willing to engage in further discussions to find a viable path forward.

Sincerely,

Trent Wright
Umpqua Bank
